Introduction	3
1 Locally integrable dynamical systems	11
1.1 Concept of local integrability	11
1.2 Linear heterogeneous systems	16
1.3 Piecewise-continuous systems	20
1.4 Homogeneous Lyapunov systems	25
1.5 On local integrability of the equations of motion of Hess's gyro	30
2 Conservative dynamical systems	35
2.1 Introductory remarks	35
2.2 Conservative mechanical systems	36
2.3 Generalised Jacobi integral	37
2.4 Conservative system in the presence of the generalised gyro- scopic forces	39
2.5 Electromechanical systems	42
2.6 Planar systems which admit the first integral	45
3 Dynamical systems in a plane	49
3.1 Conservative systems in a plane	49
3.2 Libration in the conservative system with a single degree of freedom	53
3.3 Rotational motion of the conservative system with one de- gree of freedom	58

3.4	Backbone curve and its steepness coefficient	62
3.5	Dynamical system with an invariant relationship	66
3.6	Canonisation of a system about the equilibrium position . .	72
3.7	Canonised form of the equations of motion	77
4	Conservative systems with many degrees of freedom	81
4.1	Action-angle variables	81
4.2	Conservative systems moving by inertia	86
4.3	The problem of spherical motion of a free rigid body (Euler's case)	90
4.4	On degeneration of integrable conservative systems	93
4.5	Conservative systems with a single positional coordinate . .	97
4.6	Motion of an elastically mounted, unbalanced rotor	101
4.7	Spherical motion of an axisymmetric heavy top	104
4.8	Selecting the canonical action-angle variables	107
4.9	Nearly recurrent conservative systems	109
5	Resonant solutions for systems integrable in generating approximation	113
5.1	Introductory remarks	113
5.2	On transition to the angle-action variables	115
5.3	Excluding non-critical fast variables	119
5.4	Averaging equations of motion in the vicinity of the chosen torus	121
5.5	Existence and stability of stationary solution of the averaged system	128
5.6	Existence and stability of "partially-autonomous" tori . . .	132
5.7	Anisochronous and quasi-static criteria of stability of a single-frequency regime	140
5.8	Periodic solutions of the piecewise continuous systems . . .	151
6	Canonical averaging of the equations of quantum mechanics	157
6.1	Introductory remarks	157
6.2	Stationary Schrödinger's equation as a classical Hamiltonian system	159
6.3	General properties of the canonical form of Schrödinger's equation	163
6.4	Stationary perturbation of a non-degenerate level of the discrete spectrum	166
6.5	Stationary excitation of two close levels	169
6.6	Non-stationary Schrödinger's equation as a Hamiltonian system	171
6.7	Adiabatic approximation	174
6.8	Post-adiabatic approximation	175

6.9	Quantum linear oscillator in a variable homogeneous field	177
6.10	Charged linear oscillator in an adiabatic homogeneous field	179
6.11	Adiabatic perturbation theory	182
6.12	Harmonic excitation of a charged oscillator. Non-resonant case	183
6.13	Harmonic excitation of an oscillator. Transition through a resonance	186
7	The problem of weak interaction of dynamical objects	189
7.1	The types of conservative interaction and criteria of their weakness	189
7.2	Examples of interactions of carrying and carried types	192
7.3	Equations of motion in Routh's form	194
8	Synchronisation of anisochronous objects with a single degree of freedom	197
8.1	Eliminating coordinates of the carrying system	197
8.2	The principal resonance in the system with weak carrying interactions	200
8.3	Dynamic matrix and harmonic influence coefficients of the carrying system	206
8.4	Synchronisation of the force exciters of the simplest type	213
8.5	Extremum properties of stationary synchronous motions	218
8.6	Synchronisation in a piecewise continuous system	225
9	Synchronisation of inertial vibration exciters	235
9.1	Inertial vibration exciter generated by rotational forces	235
9.2	The case of a single vibration exciter mounted on a carrying system	242
9.3	Stability of the synchronous-synphase regime	245
9.4	Self-synchronisation of vibration exciters of anharmonic forces of the constant direction	250
9.5	Stabilisation of the working synchronous regime	254
9.6	Two vibration exciters mounted on the carrying system of vibroimpact type	260
10	Synchronisation of dynamical objects of the general type	267
10.1	Weak interaction of anisochronous and isochronous objects	267
10.2	Synchronisation of the quasi-conservative objects with several degrees of freedom	272
10.3	Non-quasiconservative theory of synchronisation	278
10.4	On the influence of friction in the carrying system on the stability of synchronous motion	281
11	Periodic solutions in problems of excitation of mechanical oscillations	287

11.1 Special form of notation for equations of motion and their solutions	287
11.2 Integral stability criterion for periodic motions of electromechanical systems and systems with quasi-cyclic coordinates	294
11.3 Energy relationships for oscillations of current conductors	303
11.4 On the relationship between the resonant and non-resonant solutions	305
11.5 Routh's equations which are linear in the positional coordinates	309
