<b>Invariant manifolds, asymptotic immersion and the (adaptive) stabilization of nonlinear systems</b> .....	1
<i>Alessandro Astolfi, Romeo Ortega</i>	
1 Introduction .....	1
2 Asymptotic stabilization via immersion and invariance .....	4
3 Robustification <i>vis à vis</i> high order dynamics .....	6
4 Adaptive control via immersion and invariance .....	9
5 Conclusions and outlook .....	18
References .....	19
<b>Robust control of a nonlinear fluidics problem</b> .....	21
<i>Lubimor Baramov, Owen Tutty, Eric Rogers</i>	
1 Introduction .....	21
2 Mathematical models .....	22
3 Control design .....	28
4 Results and conclusions .....	29
References .....	31
<b>Optimal control of the Schrödinger equation with two or three levels</b> .....	33
<i>Ugo Boscain, Grégoire Charlot, Jean-Paul Gauthier</i>	
1 Introduction .....	33
2 The two levels case .....	35
3 The resonant problem with three levels .....	37
4 The counter intuitive solutions .....	41
5 Conclusion .....	42
References .....	42
<b>Strong robustness in adaptive control</b> .....	45
<i>Maria Cadic, Jan Willem Polderman</i>	
1 Introduction .....	45
2 General setup .....	46
3 Strong robustness and strongly robust stability radius .....	47
4 Existence of strongly robust sets .....	49
5 Strong robustness and open balls of systems .....	50
6 Conclusion .....	54
References .....	54

<b>On composition of Dirac structures and its implications for control by interconnection</b> .....	55
<i>Joaquín Cervera, Arjan J. van der Schaft, Alfonso Baños</i>	
1 Introduction .....	55
2 Parametrization of kernel/image representations .....	56
3 Dirac structures composition expression .....	58
4 Application example .....	61
5 Conclusions .....	62
References .....	63
<b>Adaptive nonlinear excitation control of synchronous generators</b> ..	65
<i>Gilney Damm, Riccardo Marino, Françoise Lamnabhi-Lagarrique</i>	
1 Introduction .....	65
2 Dynamical model .....	66
3 Adaptive controller and main result .....	69
4 Simulation results .....	74
5 Conclusions .....	75
References .....	76
<b>Parameter identification for nonlinear pneumatic cylinder actuators</b> .....	77
<i>N.A. Daw, J. Wang, Q.H. Wu, J. Chen, and Y. Zhao</i>	
1 Introduction .....	77
2 Mathematical model of pneumatic actuators .....	78
3 Static friction measurement .....	81
4 Description of Genetic Algorithms for parameter identification ....	82
5 Experiment and simulation results .....	83
6 Conclusion .....	86
References .....	87
<b>The quasi-infinite horizon approach to nonlinear model predictive control</b> .....	89
<i>Rolf Findeisen, Frank Allgöwer</i>	
1 Introduction to nonlinear model predictive control .....	89
2 Quasi-infinite horizon NMPC .....	94
3 Some results on output feedback NMPC .....	98
4 Some remarks on the efficient numerical solution of NMPC .....	102
5 Application example—real-time feasibility of NMPC .....	103
6 Conclusions .....	104
References .....	105
<b>State and parameter identification for nonlinear uncertain systems using variable structure theory</b> .....	109
<i>Fabienne Floret-Pontet, Françoise Lamnabhi-Lagarrique</i>	
1 Introduction .....	109
2 State identification .....	111

3	Parameter identification .....	115
4	Simultaneous state and parameter identification .....	118
5	Simulations results .....	119
6	Conclusion .....	127
	References .....	128

<b>Stabilizing memoryless controllers and controls with memory for a class of uncertain, bilinear systems with discrete and distributed delays.....</b>	<b>129</b>
---	------------

*D.P. Goodall*

1	Introduction .....	129
2	Preliminaries and nomenclature .....	130
3	Problem statement .....	130
4	Hypotheses.....	131
5	Stability results.....	133
6	Example .....	136
7	Concluding remarks .....	137
