

# Table of Contents

## 1 Introduction

Jens-Uwe Sommer and Günter Reiter .....	1
---	---

## 2 Polymer Crystallization Viewed in the General Context of Particle Formation and Crystallization

Jens Rieger .....	7
2.1 Introduction .....	7
2.2 Classical Nucleation Theory .....	8
2.3 Precursors .....	9
2.4 Spinodal vs. Binodal Phase Separation .....	11
2.5 Computer Simulations of the Early Stages of Particle Formation and Crystallization .....	11
2.6 Control of Crystallization by Additives .....	12
2.7 Ostwald's Rule of Stages .....	13
2.8 Ostwald Ripening vs. Secondary Crystallization .....	14
2.9 Discussion .....	14
References .....	14

## 3 Role of Metastable Phases in Polymer Crystallization; Early Stages of Crystal Growth

Sanjay Rastogi .....	17
3.1 Introduction .....	17
3.2 Experimental Section .....	19
3.2.1 Materials .....	19
3.2.2 High Pressure Cell .....	19
3.2.3 Polarising Optical Microscopy .....	19
3.2.4 Wide Angle X-ray Scattering .....	20
3.3 Results and Discussion .....	20
3.3.1 Polyethylene – A Summary of Previously Reported Results on Crystallisation of Single Crystals in Polyethylene Melts ....	20
3.3.2 Experimental Observations on a Crystal after Its Transformation from the Metastable Hexagonal Phase into the Thermodynamically Stable Orthorhombic Phase .....	21
3.3.3 Multilayering: Primary and Secondary Thickening .....	25

3.3.4	Size Influence in Phase Transformation: Stable, Metastable and Transient States of a Phase . . . . .	28
3.3.5	Implications to Crystallisation at Atmospheric Pressure . . . . .	38
3.3.6	An Application of Enhanced Chain Mobility in the Transient Phase of Ultra High Molecular Weight Polyethylene . . . . .	41
3.4	Conclusions . . . . .	44
	References . . . . .	46
<b>4</b>	<b>A Comparative Study of the Mechanisms of Initial Crystallization and Recrystallization after Melting in Syndiotactic Polypropene and Isotactic Polystyrene</b> Mahmoud Al-Hussein, Gert Strobl . . . . .	48
4.1	Introduction . . . . .	48
4.2	Experimental . . . . .	50
4.2.1	Sample Characteristics and Preparation . . . . .	50
4.2.2	SAXS Measurements . . . . .	50
4.3	Results . . . . .	52
4.4	Discussion . . . . .	60
	References . . . . .	62
<b>5</b>	<b>Polymer Crystallization Viewed by Magnetic Alignment</b> Tsunehisa Kimura . . . . .	64
5.1	Introduction . . . . .	64
5.2	Principle of Diamagnetic Alignment . . . . .	65
5.3	Mesophase Detected by Magnetic Alignment . . . . .	68
5.4	Molten States . . . . .	75
5.5	Magneto-Clapeyron . . . . .	78
5.6	Concluding Remarks . . . . .	79
	References . . . . .	80
<b>6</b>	<b>Following Crystallization in Polymers Using AFM</b> Jamie K. Hobbs . . . . .	82
6.1	Background . . . . .	82
6.2	The Use of AFM to Follow Crystallization . . . . .	85
6.2.1	Sample Preparation . . . . .	88
6.3	Results and Discussion . . . . .	88
6.3.1	The Crystal Melt Interface . . . . .	89
6.3.2	On the Surface Texture of Polyethylene Lamellae . . . . .	92
6.3.3	The Melting of Isolated Lamellae . . . . .	93
6.4	Conclusions . . . . .	95
	References . . . . .	96

## **7 Atomic Force Microscopy Studies of Semicrystalline Polymers at Variable Temperature**

Dimitri A. Ivanov, Sergei N. Magonov .....	98
7.1 Introduction .....	98
7.2 Studies of Polymers in Tapping Mode .....	100
7.2.1 Tip-Sample Forces .....	100
7.2.2 Image Resolution .....	102
7.2.3 Sample Preparation .....	103
7.3 Practical Examples of Imaging of Semi-crystalline Polymers at Variable Temperature .....	103
7.3.1 Flexible Chain Polymers .....	104
7.3.2 Semi-rigid Chain Polymers .....	116
7.4 Conclusions .....	127
References .....	127

## **8 Crystallization of Polymers in Thin Films: Model Experiments**

Günter Reiter, Gilles Castelein, Jens-Uwe Sommer .....	131
8.1 Introduction .....	131
8.2 Experimental Section .....	133
8.2.1 Polymers .....	133
8.2.2 Sample Preparation .....	134
8.2.3 Observation Techniques .....	135
8.3 Results and Discussion .....	136
8.3.1 Crystallization of Adsorbed PEO Homopolymer Monolayers ..	136
8.3.2 Relaxations of Polymer Crystals AFTER Formation .....	141
8.3.3 Discrete Variation of Lamellar Spacings with Temperature in Block Copolymer Systems .....	144
8.3.4 Individual Crystallization and Melting of Polymer Nanocrystals .....	147
8.4 Conclusions .....	150
References .....	151

## **9 A Generic Model for Growth and Morphogenesis of Polymer Crystals in Two Dimensions**

Jens-Uwe Sommer, Günter Reiter .....	153
9.1 Introduction .....	153
9.2 A Lattice Model for Crystallization in Polymer Monolayers .....	158
9.3 Growth Morphologies .....	162
9.4 Self-organized Crystal Thickness and Growth Velocity .....	165
9.5 Reorganization of the Polymer Crystal .....	168
9.6 Annealing and Morphogenesis – The “Crystalline Liquid State” .....	171
9.7 Heating with a Constant Rate and the Role of Morphogenesis .....	173
9.8 Conclusions .....	175
References .....	176

## **10 Structure Formation and Chain-Folding in Supercooled Polymer Melts. Some Ideas from MD Simulations with a Coarse-Grained Model**

Hendrik Meyer .....	177
10.1 Introduction .....	177
10.1.1 The Model CG-PVA: Excluded Volume, Connectivity and Rotational Isomeric States .....	178
10.1.2 Simulation Details .....	179
10.2 Structure Formation in a Melt of Short Chains .....	179
10.2.1 Homogeneous Nucleation .....	181
10.2.2 Positional, Orientational and Conformational Order .....	182
10.3 Chain-Length Dependence of Crystallization and Melting Temperatures .....	185
10.4 Chain-Folding in Isothermal Relaxation of Long Chains .....	187
10.4.1 Slightly Entangled Chains ( $N = 100$ ) .....	187
10.4.2 Entangled Chains ( $N = 400$ ) .....	191
10.5 Discussion and Conclusions .....	192
References .....	195

## **11 Lamellar Ethylene Oxide–Butadiene Block Copolymer Films as Model Systems for Confined Crystallisation**

Wim H. de Jeu .....	196
11.1 Introduction .....	196
11.2 Experimental Situation .....	197
11.3 Discussion and Modelling .....	202
11.4 Conclusions and Open Questions .....	205
References .....	207

## **12 Crystallization Kinetical Peculiarities in Polymer Blends**

Bernd-J. Jungnickel .....	208
12.1 Introduction .....	208
12.2 Immiscible Blends: Fractionated Crystallization .....	210
12.3 Blends with Miscibility Gap: Interface Crossing Crystallization .....	214
12.4 Miscible Crystallizing Blends: Pseudoeutectic Behaviour .....	215
12.5 Miscible Blends: Crystallization Induced Composition Inhomogeneities .....	219
12.6 Miscible Blends: Competition Between Crystallization and Vitrification .....	225
12.7 Blends with Miscibility Gap: Competition Between Crystallization and Mixing/Demixing .....	229
12.8 Picture Gallery .....	231
12.9 Concluding Remarks .....	236
References .....	236

### **13 Dendritic Growth of Polyethylene Oxide on Patterned Surfaces**

Hans-Georg Braun, Evelyn Meyer, Mingtai Wang .....	238
13.1 Introduction .....	238
13.2 Creation of Defined Micrometersized Patterns by Chemical Surface Heterogenisation .....	239
13.3 Preparation of Ultrathin Micropatterned Amorphous Polyethylene Oxide (PEO) Layers by Controlled Dewetting on Heterogeneous Surfaces .....	240
13.4 Characteristic Growth Patterns of PEO Lamellae on Micropatterned Surface Areas .....	243
13.4.1 Basic Ideas on Diffusion Controlled Crystallisation .....	243
13.4.2 Branching Structures of PEO Crystallised in Ultrathin Micro-patterned Films .....	245
13.4.3 Crystallisation of PEO in Microdroplets Obtained by Dewetting on Heterogeneous Surfaces .....	249
13.5 Summary .....	250
References .....	250

### **14 Vitrification and Devitrification of the Rigid Amorphous Fraction in Semicrystalline Polymers Revealed from Frequency Dependent Heat Capacity**

Christoph Schick, Andreas Wurm, Alaa Mohammed .....	252
14.1 Introduction .....	252
14.2 Determination of the Rigid Amorphous Fraction .....	255
14.3 Experimental .....	258
14.4 Results .....	261
14.5 Discussion .....	267
14.6 Conclusion .....	271
References .....	272

### **15 Probing Crystallization Studying Amorphous Phase Evolution**

Tiberio A. Ezquerro, Aurora Nogales .....	275
15.1 Introduction .....	275
15.2 Brief Description of Dielectric Spectroscopy .....	277
15.3 Influence of Crystallinity on the Segmental Relaxation .....	278
15.4 Influence of Crystallinity on the Segmental Cooperativity .....	282
15.5 Crystallization as Revealed by the Time Evolution of the Crystalline and the Amorphous Phases .....	284
15.5.1 Lamellar Structure Formation .....	284
15.5.2 Crystallization Induced Effects in the Amorphous Phase .....	288
15.5.3 Combined Picture About Crystallization from the Structure-Dynamics Relationships .....	291
15.6 Conclusions .....	294

## **16 Modeling Polymer Crystallization: DSC Approach**

Joan Josep Suñol .....	297
16.1 Introduction .....	297
16.2 Kinetic Analysis .....	298
16.3 Specific Surface Energy .....	306
16.4 Conclusions .....	308
References .....	310

## **17 A Computational Model for Processing of Semicrystalline Polymers: The Effects of Flow-Induced Crystallization**

Gerrit W.M. Peters .....	312
17.1 Introduction .....	312
17.2 Modelling .....	313
17.2.1 Balance Equations .....	313
17.2.2 Constitutive Equations .....	313
17.3 Results .....	318
17.4 Conclusions .....	323
References .....	324

## **18 Physical Cross Links in Amorphous PET, Influence of Cooling Rate and Ageing**

Stefano Piccarolo, Elena Vassileva, Zebene Kiflie .....	325
18.1 Introduction .....	325
18.2 Continuous Cooling Transformation (CCT) of PET .....	326
18.3 Physical Cross Links vs Entanglements .....	327
18.4 Sample Preparation and Test Procedure .....	329
18.5 Isothermal Crystallization of Glassy PET .....	330
18.6 Rejuvenation Procedure .....	331
18.7 Results .....	332
18.8 Conclusions .....	340
References .....	341

## **19 Maximum Crystal Growth Rate and Its Corresponding State in Polymeric Materials**

Norimasa Okui, Susumu Umemoto .....	343
19.1 Introduction .....	343
19.2 Test of WLF and Arrhenius Expressions .....	344
19.3 Master Curve for Crystal Growth Rate .....	347
19.4 Molecular Weight Dependence of Crystal Growth Rate .....	350
19.4.1 Effect of Super Cooling on the Molecular Weight Dependence of Growth Rate .....	353
19.4.2 Molecular Weight Dependence of Maximum Crystal Growth Rate .....	354
19.5 Relationship Between $T_m^o$ and $T_{cmax}$ .....	357

19.5.1 Ratio of $\Delta E$ and $\Delta H_m$ .....	359
19.5.2 Ratio of $\bar{\sigma}$ and $\Delta H_m$ .....	360
19.6 Relationship Among Thermodynamic Transition Temperatures.....	360
19.7 Conclusions .....	363
References .....	364
 <b>20 Lamellar Growth in Melt-Crystallizing Polymers: Some Effect Related to a Nucleating Agent</b>	
Gaetano Di Marco, Marco Pieruccini .....	366
20.1 Introduction .....	366
20.2 Preliminary Analysis .....	367
20.3 Thermodynamic Viewpoint .....	368
20.4 Lattice Model .....	371
20.5 SAXS Analysis .....	374
20.6 Concluding Remarks .....	376
References .....	377
 <b>21 Outlook and Open Questions: A Personal View</b>	
Günter Reiter, Jens-Uwe Sommer .....	378
 <b>Subject Index</b> .....	 383

Polymer Crystallization  
Observations, Concepts and Interpretations  
Reiter, G.; Sommer, J.-U. (Eds.)  
2003, XVIII, 386 p., Hardcover  
ISBN: 978-3-540-44342-1
