Review of Optical Data Storage

Daniel Day, Min Gu, and Andrew Smallridge	1
1. Introduction to Optical Data Storage	1
1.1. Compact Discs/Digital Video Discs	2
1.2. Magneto-Optical Discs	5
1.3. Solid Immersion Lens	5
1.4. Holographic Storage	6
1.5. Three-Dimensional Bit Optical Storage	8
2. Three-Dimensional Bit Optical Data Storage	8
2.1. Principle of Three-Dimensional Bit Optical Data Storage	8
2.2. Single-Photon Versus Two-Photon Excitation	9
2.3. Photopolymerization Effect	11
2.4. Photobleaching Effect	11
2.5. Photochromic Effect	12
3. Photorefractive Effect	13
3.1. Photorefractive Crystals	14
3.2. Localized Photorefractive Effect	15
3.3. Three-Dimensional Photorefractive Bit Data Storage	16
4. Conclusions	18
References	18

Two-Step Processes and IR Recording in Photorefractive Crystals

Eckhard Krätzig and Karsten Buse	23
1. Introduction	23
2. Early Experiments	24
3. Two-Step Excitation via Shallow Levels	28
4. Lifetime of the Holograms	32
5. Advantages of Infrared Recording	34
6. Conclusions	37
References	37

**Gated Optical Recording for Nonvolatile Holography
in Photorefractive Materials**

Lambertus Hesselink and Sergei S. Orlov 41

1. Introduction 41

2. Gated Recording in Undoped Stoichiometric Lithium Niobate 43

3. Doped Stoichiometric Lithium Niobate 49

4. Material Preparation and Characterization 51

5. Digital Information Storage Experiment
in Two-Photon Photorefractive Material 53

6. Conclusions 56

References 57

**Photorefractive Copper-Doped LiNbO_3 Waveguides
for Holography Fabricated by a Combined Technique
of Ion Exchange and Ion Implantation**

Sergey M. Kostritskii and Paul Moretti 59

1. Introduction 59

2. Waveguide Fabrication and Characterization 61

3. Copper Doping by the Exchange Process 62

4. Photorefractive Properties 63

4.1. Method of Characterization 63

4.2. Effects of the Combined Copper
and Proton Exchange Conditions 64

4.3. Effects of the Fabrication Method and Mg Co-doping 66

5. Holographic Recording 68

5.1. Dynamics of Holographic Recording 68

5.2. Diffraction Efficiency 70

6. Discussion and Conclusions 71

References 72

**Two-Photon Optical Storage in Photorefractive Polymers
in the Near-Infrared Spectral Range**

Daniel Day, Min Gu, and Andrew Smallridge 75

1. Three-Dimensional Bit Optical Data Storage
in a Photorefractive Polymer 75

2. Experimental Recording System 76

3. Experimental Reading System 78

3.1. Transmission Reading 78

3.2. Differential Interference Contrast Reading 79

4. Pulsed Beam Illumination 79

4.1. Multi-layered Data Storage 80

4.2. Rewritable Data Storage 81

5. Bit Characterisation 83

6. Continuous-Wave Illumination	86
6.1. Requirements for Two-Photon Excitation with Continuous-Wave Illumination	86
6.2. Continuous-Wave Multi-Layered Data Storage	87
6.3. Continuous-Wave Rewritable Data Storage	87
7. Conclusions	89
References	90

Long-Lifetime Photorefractive Holographic Devices via Thermal Fixing Methods

Mercedes Carrascosa, José M. Cabrera, and Fernando Agulló-López91

1. Introduction	91
2. The Photorefractive Effect	92
3. Photorefractive Fixing Techniques	93
4. Physical Model for Thermal Fixing	93
4.1. Standard Model for LiNbO_3	93
4.2. Other Mechanisms	95
4.3. Erasure of Fixed Gratings	96
4.4. Fixing in Other Materials	96
5. Mathematical Formulation of the Model	96
5.1. General Equations	97
5.2. First-Order Equations: Relaxation Modes	98
5.3. A Useful Approximate Solution	100
6. Experimental Data	100
6.1. Fixing and Developing Kinetics: Influence of Temperature	101
6.2. Diffraction Efficiency of Fixed Gratings	102
6.3. Lifetime of Fixed Holograms	102
7. Optimization of the Fixing Process	103
8. Volume Holographic Devices	104
8.1. Data Storage	104
8.2. Very Narrow-Bandwidth Interference Filters and Mirrors	105
8.3. Wavelength Demultiplexers	106
8.4. Other Devices	106
9. Waveguide Holographic Devices	106
10. Summary	107
References	108

Holographic Reflection Filters in Photorefractive LiNbO_3 Channel Waveguides

Detlef Kip and Jörg Hukriede 111

1. Introduction	111
2. Sample Preparation	113
3. Holographic Recording and Readout	115

4. Experimental Results	116
4.1. Photorefractive Properties	117
4.2. Fundamental Filter Properties	119
4.3. Hologram Multiplexing	120
4.4. Wavelength Tuning and Electrical Switching	121
4.5. Long-Term Stability of Fixed Gratings	122
5. Conclusions and Outlook	126
References	127

**Optical Lambda-Switching at Telecom Wavelengths
Based on Electroholography**

Aharon J. Agranat	129
1. Introduction	129
2. The Electrically Controlled Bragg Grating	130
3. The Physical Basis of Electroholography	134
3.1. The Voltage-Controlled Photorefractive Effect in the Paraelectric Phase	134
3.2. The Voltage-Controlled Photorefractive Effect in KLTN	137
3.3. Assessment of the KLTN Crystal as an Electroholographic Medium	138
4. The Basic Electroholographic Switch Module	141
4.1. The Architecture and Operation of the Basic EH Switch Module	141
4.2. The Performance Parameters of the Basic EH Switch Module	143
5. Applications of Electroholographic Switching	152
5.1. The Electroholographic Dynamic Optical Add Drop Multiplexer	152
5.2. The Electroholographic cross Connect	153
6. Conclusions	155
References	155

**1550 nm Volume Holographic Devices
for Optical Communication Networks**

Pierpaolo Boffi, Maria C. Ubaldi, Davide Piccinin, and Mario Martinelli	157
1. Introduction	157
2. Building the Optical Communication Network	158
2.1. The Optical Wavelength Multiplexer/Demultiplexer	159
2.2. The Optical Cross-Connect and the Switching Fabric	160
3. Volume Holography for 1550 nm Optical Device Implementation	160
3.1. Recording and Readout of Multiple Holograms	161
3.2. Two-Lambda Method	162
3.3. Long-Term Lifetime by Thermal Fixing	164

4. VH-Based Devices for WDM Applications	166
4.1. Feasibility of an Optical Wavelength Demultiplexer	166
4.2. Feasibility of a WDM-Readable Digital Database	169
5. Long-Term Reliability of VH-Based Devices	172
6. High-Dense WDM Device Design	173
7. Conclusions	176
References	176
