

# Table of Contents

|          |  |    |
|----------|--|----|
| <b>1</b> | <b>The Discrete Case</b>   | 1  |
| 1.1      | A Model with Two Dates and Two States of the World                   | 1  |
| 1.1.1    | The Model  | 1  |
| 1.1.2    | Hedging Portfolio, Value of the Option                               | 2  |
| 1.1.3    | The Risk-Neutral Measure, Put–Call Parity                            | 4  |
| 1.1.4    | No Arbitrage Opportunities   | 5  |
| 1.1.5    | The Risk Attached to an Option                                       | 6  |
| 1.1.6    | Incomplete Markets   | 8  |
| 1.2      | A One-Period Model with $(d + 1)$ Assets and $k$ States of the World | 11 |
| 1.2.1    | No Arbitrage Opportunities   | 12 |
| 1.2.2    | Complete Markets   | 18 |
| 1.2.3    | Valuation by Arbitrage in the Case of a Complete Market              | 18 |
| 1.2.4    | Incomplete Markets: the Arbitrage Interval                           | 19 |
| 1.3      | Optimal Consumption and Portfolio Choice in a One-Agent Model        | 22 |
| 1.3.1    | The Maximization Problem   | 23 |
| 1.3.2    | An Equilibrium Model with a Representative Agent                     | 28 |
| 1.3.3    | The Von Neumann–Morgenstern Model, Risk Aversion                     | 29 |
| 1.3.4    | Optimal Choice in the VNM Model                                      | 31 |
| 1.3.5    | Equilibrium Models with Complete Financial Markets                   | 35 |
| <b>2</b> | <b>Dynamic Models in Discrete Time</b>                               | 41 |
| 2.1      | A Model with a Finite Horizon  | 42 |
| 2.2      | Arbitrage with a Finite Horizon                                      | 43 |
| 2.2.1    | Arbitrage Opportunities  | 43 |
| 2.2.2    | Arbitrage and Martingales  | 44 |
| 2.3      | Trees  | 47 |
| 2.4      | Complete Markets with a Finite Horizon                               | 51 |
| 2.4.1    | Characterization   | 52 |
| 2.5      | Valuation  | 53 |
| 2.5.1    | The Complete Market Case   | 54 |
| 2.6      | An Example   | 55 |
| 2.6.1    | The Binomial Model   | 55 |

|          |   |            |
|----------|---|------------|
| 2.6.2    | Option Valuation . . . . .                                    | 57         |
| 2.6.3    | Approaching the Black–Scholes Model . . . . .                 | 58         |
| 2.7      | Maximization of the Final Wealth . . . . .                    | 62         |
| 2.8      | Optimal Choice of Consumption and Portfolio . . . . .         | 66         |
| 2.9      | Infinite Horizon . . . . .                                    | 71         |
| <b>3</b> | <b>The Black–Scholes Formula . . . . .</b>                    | <b>79</b>  |
| 3.1      | Stochastic Calculus . . . . .                                 | 79         |
| 3.1.1    | Brownian Motion and the Stochastic Integral . . . . .         | 80         |
| 3.1.2    | Itô Processes. Girsanov’s Theorem . . . . .                   | 82         |
| 3.1.3    | Itô’s Lemma . . . . .   | 83         |
| 3.1.4    | Multidimensional Processes . . . . .                          | 85         |
| 3.1.5    | Multidimensional Itô’s Lemma . . . . .                        | 86         |
| 3.1.6    | Examples . . . . .  | 87         |
| 3.2      | Arbitrage and Valuation . . . . .                             | 88         |
| 3.2.1    | Financing Strategies . . . . .                                | 88         |
| 3.2.2    | Arbitrage and the Martingale Measure . . . . .                | 90         |
| 3.2.3    | Valuation . . . . .   | 92         |
| 3.3      | The Black–Scholes Formula: the One-Dimensional Case . . . . . | 93         |
| 3.3.1    | The Model . . . . .   | 93         |
| 3.3.2    | The Black–Scholes Formula . . . . .                           | 94         |
| 3.3.3    | The Risk-Neutral Measure . . . . .                            | 98         |
| 3.3.4    | Explicit Calculations . . . . .                               | 99         |
| 3.3.5    | Comments on the Black–Scholes Formula . . . . .               | 101        |
| 3.4      | Extension of the Black–Scholes Formula . . . . .              | 105        |
| 3.4.1    | Financing Strategies . . . . .                                | 105        |
| 3.4.2    | The State Variable . . . . .                                  | 106        |
| 3.4.3    | The Black–Scholes Formula . . . . .                           | 107        |
| 3.4.4    | Special Case . . . . .  | 109        |
| 3.4.5    | The Risk-Neutral Measure . . . . .                            | 110        |
| 3.4.6    | Example . . . . .   | 111        |
| 3.4.7    | Applications of the Black–Scholes Formula . . . . .           | 112        |
| <b>4</b> | <b>Portfolios Optimizing Wealth and Consumption . . . . .</b> | <b>125</b> |
| 4.1      | The Model . . . . .   | 125        |
| 4.2      | Optimization . . . . .  | 128        |
| 4.3      | Solution in the Case of Constant Coefficients . . . . .       | 128        |
| 4.3.1    | Dynamic Programming . . . . .                                 | 128        |
| 4.3.2    | The Hamilton–Jacobi–Bellman Equation . . . . .                | 129        |
| 4.3.3    | A Special Case . . . . .                                      | 134        |
| 4.4      | Admissible Strategies . . . . .                               | 135        |
| 4.5      | Existence of an Optimal Pair . . . . .                        | 139        |
| 4.5.1    | Construction of an Optimal Pair . . . . .                     | 140        |
| 4.5.2    | The Value Function . . . . .                                  | 142        |
| 4.5.3    | A Special Case . . . . .                                      | 143        |

|          |   |            |
|----------|---|------------|
| 4.6      | Solution in the Case of Deterministic Coefficients . . . . .  | 145        |
| 4.6.1    | The Value Function and Partial Differential Equations . . . . .                                     | 146        |
| 4.6.2    | Optimal Wealth . . . . .  | 147        |
| 4.6.3    | Obtaining the Optimal Portfolio . . . . .   | 148        |
| 4.7      | Market Completeness and NAO . . . . .   | 149        |
| <b>5</b> | <b>The Yield Curve . . . . .</b>  | <b>157</b> |
| 5.1      | Discrete-Time Model . . . . .   | 157        |
| 5.2      | Continuous-Time Model . . . . .   | 162        |
| 5.2.1    | Definitions . . . . .   | 162        |
| 5.2.2    | Change of Numéraire . . . . .   | 164        |
| 5.2.3    | Valuation of an Option on a Coupon Bond . . . . .   | 169        |
| 5.3      | The Heath–Jarrow–Morton Model . . . . .   | 169        |
| 5.3.1    | The Model . . . . .   | 170        |
| 5.3.2    | The Linear Gaussian Case . . . . .  | 172        |
| 5.4      | When the Spot Rate is Given . . . . .   | 176        |
| 5.5      | The Vasicek Model . . . . .   | 178        |
| 5.5.1    | The Ornstein–Uhlenbeck Process . . . . .  | 178        |
| 5.5.2    | Determining $P(t, T)$ when $q$ is Constant . . . . .  | 180        |
| 5.6      | The Cox–Ingersoll–Ross Model . . . . .  | 183        |
| 5.6.1    | The Cox–Ingersoll–Ross Process . . . . .  | 183        |
| 5.6.2    | Valuation of a Zero Coupon Bond . . . . .   | 184        |
| <b>6</b> | <b>Equilibrium of Financial Markets in Discrete Time . . . . .</b>                                  | <b>189</b> |
| 6.1      | Equilibrium in a Static Exchange Economy . . . . .  | 190        |
| 6.2      | The Demand Approach . . . . .   | 192        |
| 6.3      | The Negishi Method . . . . .  | 194        |
| 6.3.1    | Pareto Optima . . . . .   | 194        |
| 6.3.2    | Two Characterizations of Pareto Optima . . . . .  | 195        |
| 6.3.3    | Existence of an Equilibrium . . . . .   | 198        |
| 6.4      | The Theory of Contingent Markets . . . . .  | 199        |
| 6.5      | The Arrow–Radner Equilibrium Exchange Economy with<br>Financial Markets with Two Dates . . . . .    | 201        |
| 6.6      | The Complete Markets Case . . . . .   | 203        |
| 6.7      | The Incomplete Markets Case . . . . .   | 205        |
| 6.8      | The CAPM . . . . .  | 208        |
| <b>7</b> | <b>Equilibrium of Financial Markets in Continuous Time.<br/>The Complete Markets Case . . . . .</b> | <b>217</b> |
| 7.1      | The Model . . . . .   | 217        |
| 7.1.1    | The Financial Market . . . . .  | 218        |
| 7.1.2    | The Economy . . . . .   | 219        |
| 7.1.3    | Admissible Pairs . . . . .  | 220        |
| 7.1.4    | Definition and Existence of a Radner Equilibrium . . . . .  | 222        |
| 7.2      | Existence of a Contingent Arrow–Debreu Equilibrium . . . . .  | 224        |

|          |  |     |
|----------|--|-----|
| 7.2.1    | Aggregate Utility . . . . .  | 224 |
| 7.2.2    | Definition and Characterization of Pareto Optima . . . .                             | 226 |
| 7.2.3    | Existence and Characterization of a Contingent<br>Arrow–Debreu Equilibrium . . . . . | 228 |
| 7.2.4    | Existence of a Radner Equilibrium . . . . .  | 228 |
| 7.3      | Applications . . . . .   | 230 |
| 7.3.1    | Arbitrage Price of Real Secondary Assets. Lucas’<br>Formula . . . . .                | 231 |
| 7.3.2    | CCAPM (Consumption-based Capital Asset Pricing<br>Model) . . . . .                   | 232 |
| <b>8</b> | <b>Incomplete Markets</b> . . . . .  | 237 |
| 8.1      | Incomplete Markets . . . . .   | 237 |
| 8.1.1    | The Case of Constant Coefficients . . . . .  | 237 |
| 8.1.2    | No-Arbitrage Markets . . . . .   | 239 |
| 8.1.3    | The Price Range . . . . .  | 240 |
| 8.1.4    | Superhedging . . . . .   | 242 |
| 8.1.5    | The Minimal Probability Measure . . . . .  | 243 |
| 8.1.6    | Valuation Using Utility Functions . . . . .  | 243 |
| 8.1.7    | Transaction Costs . . . . .  | 245 |
| 8.2      | Stochastic Volatility . . . . .  | 245 |
| 8.2.1    | The Robustness of the Black–Scholes Formula . . . . .                                | 245 |
| 8.3      | Wealth Optimization . . . . .  | 248 |
| <b>9</b> | <b>Exotic Options</b> . . . . .  | 249 |
| 9.1      | The Hitting Time and Supremum for Brownian Motion . . . .                            | 250 |
| 9.1.1    | Distribution of the Pair $(B_t, M_t)$ . . . . .                                      | 250 |
| 9.1.2    | Distribution of Sup and of the Hitting Time . . . . .                                | 251 |
| 9.1.3    | Distribution of Inf . . . . .  | 252 |
| 9.1.4    | Laplace Transforms . . . . .   | 252 |
| 9.1.5    | Hitting Time for a Double Barrier . . . . .  | 252 |
| 9.2      | Drifted Brownian Motion . . . . .  | 254 |
| 9.2.1    | The Laplace Transform of a Hitting Time . . . . .                                    | 254 |
| 9.2.2    | Distribution of the Pair (Maximum, Minimum) . . . . .                                | 254 |
| 9.2.3    | Evaluation of $E(e^{-rT_y} \mathbb{1}_{T_y < a})$ . . . . .                          | 255 |
| 9.3      | Barrier Options . . . . .  | 256 |
| 9.3.1    | Down-and-Out Options . . . . .   | 256 |
| 9.3.2    | Down-and-In Options . . . . .  | 256 |
| 9.3.3    | Up-and-Out and Up-and-In Options . . . . .   | 257 |
| 9.3.4    | Intermediate Calculations . . . . .  | 257 |
| 9.3.5    | The Value of the Compensation . . . . .  | 260 |
| 9.3.6    | Valuation of a DIC Option . . . . .  | 260 |
| 9.3.7    | Up-and-In Options . . . . .  | 262 |
| 9.3.8    | P. Carr ’s Symmetry . . . . .  | 264 |
| 9.4      | Double Barriers . . . . .  | 267 |

|          |   |            |
|----------|---|------------|
| 9.5      | Lookback Options .....  | 268        |
| 9.6      | Other Options .....   | 270        |
| 9.6.1    | Options Linked to the Hitting Time of a Barrier .....                 | 270        |
| 9.6.2    | Options Linked to Occupation Times .....                              | 271        |
| 9.7      | Other Products .....  | 273        |
| 9.7.1    | Asian Options or Average Rate Options .....                           | 273        |
| 9.7.2    | Products Depending on an Interim Date .....                           | 274        |
| 9.7.3    | Still More Products .....   | 274        |
| <b>A</b> | <b>Brownian Motion .....</b>  | <b>277</b> |
| A.1      | Historical Background .....   | 277        |
| A.2      | Intuition .....   | 277        |
| A.3      | Random Walk .....   | 278        |
| A.4      | The Stochastic Integral .....   | 281        |
| A.5      | Itô's Formula .....   | 283        |
| <b>B</b> | <b>Numerical Methods .....</b>  | <b>285</b> |
| B.1      | Finite Difference .....   | 286        |
| B.1.1    | Method .....  | 287        |
| B.1.2    | The Implicit Scheme Case .....  | 288        |
| B.1.3    | Solving the System .....  | 289        |
| B.1.4    | Other Schemes .....   | 290        |
| B.2      | Extrapolation Methods .....   | 290        |
| B.2.1    | The Heat Equation .....   | 290        |
| B.2.2    | Approximations .....  | 291        |
| B.3      | Simulation .....  | 292        |
| B.3.1    | Simulation of the Uniform Distribution on $[0, 1]$ .....              | 292        |
| B.3.2    | Simulation of Discrete Variables .....                                | 293        |
| B.3.3    | Simulation of a Random Variable .....                                 | 293        |
| B.3.4    | Simulation of an Expectation .....                                    | 294        |
| B.3.5    | Simulation of a Brownian Motion .....                                 | 295        |
| B.3.6    | Simulation of Solutions to Stochastic Differential<br>Equations ..... | 295        |
| B.3.7    | Calculating $E(f(X_t))$ .....   | 297        |
|          | <b>References .....</b>   | <b>299</b> |
