# Contents

<b>1</b>	<b>The Discrete Case</b>	<b>1</b>
1.1	A Model with Two Dates and Two States of the World	1
1.1.1	The Model	1
1.1.2	Hedging Portfolio, Value of the Option	2
1.1.3	The Risk-Neutral Measure, Put–Call Parity	4
1.1.4	No Arbitrage Opportunities	5
1.1.5	The Risk Attached to an Option	6
1.1.6	Incomplete Markets	8
1.2	A One-Period Model with $(d + 1)$ Assets and $k$ States of the World	12
1.2.1	No Arbitrage Opportunities	13
1.2.2	Complete Markets	18
1.2.3	Valuation by Arbitrage in the Case of a Complete Market	19
1.2.4	Incomplete Markets: the Arbitrage Interval	20
1.3	Optimal Consumption and Portfolio Choice in a One-Agent Model	22
1.3.1	The Maximization Problem	23
1.3.2	An Equilibrium Model with a Representative Agent	28
1.3.3	The Von Neumann–Morgenstern Model, Risk Aversion	30
1.3.4	Optimal Choice in the VNM Model	32
1.3.5	Equilibrium Models with Complete Financial Markets	36
<b>2</b>	<b>Dynamic Models in Discrete Time</b>	<b>43</b>
2.1	A Model with a Finite Horizon	44
2.2	Arbitrage with a Finite Horizon	45
2.2.1	Arbitrage Opportunities	45
2.2.2	Arbitrage and Martingales	46
2.3	Trees	49
2.4	Complete Markets with a Finite Horizon	53
2.4.1	Characterization	54

2.5	Valuation . . . . .	55
2.5.1	The Complete Market Case . . . . .	56
2.6	An Example . . . . .	57
2.6.1	The Binomial Model . . . . .	57
2.6.2	Option Valuation . . . . .	59
2.6.3	Approaching the Black–Scholes Model . . . . .	60
2.7	Maximization of the Final Wealth . . . . .	64
2.8	Optimal Choice of Consumption and Portfolio . . . . .	68
2.9	Infinite Horizon . . . . .	73
<b>3</b>	<b>The Black–Scholes Formula . . . . .</b>	<b>81</b>
3.1	Stochastic Calculus . . . . .	81
3.1.1	Brownian Motion and the Stochastic Integral . . . . .	82
3.1.2	Itô Processes. Girsanov’s Theorem . . . . .	84
3.1.3	Itô’s Lemma . . . . .	85
3.1.4	Multidimensional Processes . . . . .	87
3.1.5	Multidimensional Itô’s Lemma . . . . .	88
3.1.6	Examples . . . . .	89
3.2	Arbitrage and Valuation . . . . .	90
3.2.1	Financing Strategies . . . . .	90
3.2.2	Arbitrage and the Martingale Measure . . . . .	92
3.2.3	Valuation . . . . .	94
3.3	The Black–Scholes Formula: the One-Dimensional Case . . . . .	95
3.3.1	The Model . . . . .	95
3.3.2	The Black–Scholes Formula . . . . .	96
3.3.3	The Risk-Neutral Measure . . . . .	99
3.3.4	Explicit Calculations . . . . .	101
3.3.5	Comments on the Black–Scholes Formula . . . . .	103
3.4	Extension of the Black–Scholes Formula . . . . .	107
3.4.1	Financing Strategies . . . . .	107
3.4.2	The State Variable . . . . .	108
3.4.3	The Black–Scholes Formula . . . . .	109
3.4.4	Special Case . . . . .	111
3.4.5	The Risk-Neutral Measure . . . . .	111
3.4.6	Example . . . . .	113
3.4.7	Applications of the Black–Scholes Formula . . . . .	113
<b>4</b>	<b>Portfolios Optimizing Wealth and Consumption . . . . .</b>	<b>127</b>
4.1	The Model . . . . .	127
4.2	Optimization . . . . .	130
4.3	Solution in the Case of Constant Coefficients . . . . .	130
4.3.1	Dynamic Programming . . . . .	130
4.3.2	The Hamilton–Jacobi–Bellman Equation . . . . .	131
4.3.3	A Special Case . . . . .	136
4.4	Admissible Strategies . . . . .	137

4.5	Existence of an Optimal Pair . . . . .	141
4.5.1	Construction of an Optimal Pair . . . . .	142
4.5.2	The Value Function . . . . .	144
4.5.3	A Special Case . . . . .	145
4.6	Solution in the Case of Deterministic Coefficients . . . . .	147
4.6.1	The Value Function and Partial Differential Equations . . . . .	148
4.6.2	Optimal Wealth . . . . .	149
4.6.3	Obtaining the Optimal Portfolio . . . . .	150
4.7	Market Completeness and NAO . . . . .	151
<b>5</b>	<b>The Yield Curve . . . . .</b>	<b>159</b>
5.1	Discrete-Time Model . . . . .	159
5.2	Continuous-Time Model . . . . .	164
5.2.1	Definitions . . . . .	164
5.2.2	Change of Numéraire . . . . .	166
5.2.3	Valuation of an Option on a Coupon Bond . . . . .	171
5.3	The Heath–Jarrow–Morton Model . . . . .	172
5.3.1	The Model . . . . .	172
5.3.2	The Linear Gaussian Case . . . . .	174
5.4	When the Spot Rate is Given . . . . .	179
5.5	The Vasicek Model . . . . .	181
5.5.1	The Ornstein–Uhlenbeck Process . . . . .	181
5.5.2	Determining $P(t, T)$ when $q$ is Constant . . . . .	183
5.6	The Cox–Ingersoll–Ross Model . . . . .	185
5.6.1	The Cox–Ingersoll–Ross Process . . . . .	185
5.6.2	Valuation of a Zero Coupon Bond . . . . .	187
<b>6</b>	<b>Equilibrium of Financial Markets in Discrete Time . . . . .</b>	<b>191</b>
6.1	Equilibrium in a Static Exchange Economy . . . . .	192
6.2	The Demand Approach . . . . .	194
6.3	The Negishi Method . . . . .	196
6.3.1	Pareto Optima . . . . .	196
6.3.2	Two Characterizations of Pareto Optima . . . . .	197
6.3.3	Existence of an Equilibrium . . . . .	200
6.4	The Theory of Contingent Markets . . . . .	201
6.5	The Arrow–Radner Equilibrium Exchange Economy with Financial Markets with Two Dates . . . . .	203
6.6	The Complete Markets Case . . . . .	205
6.7	The CAPM . . . . .	208
<b>7</b>	<b>Equilibrium of Financial Markets in Continuous Time. The Complete Markets Case . . . . .</b>	<b>217</b>
7.1	The Model . . . . .	217
7.1.1	The Financial Market . . . . .	218
7.1.2	The Economy . . . . .	219

7.1.3	Admissible Pairs	220
7.1.4	Definition and Existence of a Radner Equilibrium	222
7.2	Existence of a Contingent Arrow–Debreu Equilibrium	224
7.2.1	Aggregate Utility	224
7.2.2	Definition and Characterization of Pareto Optima	225
7.2.3	Existence and Characterization of a Contingent Arrow–Debreu Equilibrium	228
7.2.4	Existence of a Radner Equilibrium	228
7.3	Applications	230
7.3.1	Arbitrage Price of Real Secondary Assets. Lucas’ Formula	230
7.3.2	CCAPM (Consumption-based Capital Asset Pricing Model)	232
<b>8</b>	<b>Incomplete Markets</b>	237
8.1	Incomplete Markets	237
8.1.1	The Case of Constant Coefficients	237
8.1.2	No-Arbitrage Markets	239
8.1.3	The Price Range	240
8.1.4	Superhedging	242
8.1.5	The Minimal Probability Measure	243
8.1.6	Valuation Using Utility Functions	244
8.1.7	Transaction Costs	245
8.2	Stochastic Volatility	245
8.2.1	The Robustness of the Black–Scholes Formula	246
8.3	Wealth Optimization	247
<b>9</b>	<b>Exotic Options</b>	249
9.1	The Hitting Time and Supremum for Brownian Motion	250
9.1.1	Distribution of the Pair $(B_t, M_t)$	250
9.1.2	Distribution of Sup and of the Hitting Time	251
9.1.3	Distribution of Inf	252
9.1.4	Laplace Transforms	252
9.1.5	Hitting Time for a Double Barrier	253
9.2	Drifted Brownian Motion	254
9.2.1	The Laplace Transform of a Hitting Time	254
9.2.2	Distribution of the Pair (Maximum, Minimum)	255
9.2.3	Evaluation of $E(e^{-rT_y} \mathbb{1}_{T_y < a})$	255
9.3	Barrier Options	256
9.3.1	Down-and-Out Options	256
9.3.2	Down-and-In Options	257
9.3.3	Up-and-Out and Up-and-In Options	257
9.3.4	Intermediate Calculations	257
9.3.5	The Value of the Compensation	260
9.3.6	Valuation of a DIC Option	261

9.3.7	Up-and-In Options .....	263
9.3.8	P. Carr 's Symmetry .....	264
9.4	Double Barriers .....	267
9.5	Lookback Options .....	269
9.6	Other Options .....	271
9.6.1	Options Linked to the Hitting Time of a Barrier.....	271
9.6.2	Options Linked to Occupation Times .....	272
9.7	Other Products .....	274
9.7.1	Asian Options or Average Rate Options .....	274
9.7.2	Products Depending on an Interim Date .....	275
9.7.3	Still More Products.....	275
<b>A</b>	<b>Brownian Motion</b> .....	279
A.1	Historical Background.....	279
A.2	Intuition .....	279
A.3	Random Walk .....	280
A.4	The Stochastic Integral.....	283
A.5	Itô's Formula .....	285
<b>B</b>	<b>Numerical Methods</b> .....	287
B.1	Finite Difference .....	288
B.1.1	Method .....	289
B.1.2	The Implicit Scheme Case .....	290
B.1.3	Solving the System .....	291
B.1.4	Other Schemes .....	292
B.2	Extrapolation Methods.....	292
B.2.1	The Heat Equation .....	293
B.2.2	Approximations .....	293
B.3	Simulation.....	294
B.3.1	Simulation of the Uniform Distribution on $[0, 1]$ .....	295
B.3.2	Simulation of Discrete Variables .....	295
B.3.3	Simulation of a Random Variable.....	295
B.3.4	Simulation of an Expectation .....	296
B.3.5	Simulation of a Brownian Motion.....	297
B.3.6	Simulation of Solutions to Stochastic Differential Equations .....	298
B.3.7	Calculating $E(f(X_t))$ .....	299
	<b>References</b> .....	301
	<b>Index</b> .....	323
