1 Membrane Thin Film Preparation and Applications 1
Naotsugu Itoh

1.1 Introduction 1
1.1.1 General Aspects 1
1.1.2 Roles of Membrane 1
1.2 Preparation of Ceramic Membranes 4
1.2.1 Sol-Gel Process for Meso - and Micro-porous Membranes ... 4
1.2.2 Solid-State Synthesis for Mixed Conductor 6
1.2.3 Hydrothermal Process for Zeolite Membrane 9
1.2.4 Anodizing Process for Porous Membrane with Straight Pores 11
1.3 Preparation of Metal Membranes 14
1.3.1 Electroless Plating 15
1.3.2 Electroplating 17
1.3.3 CVD Process 17
1.3.4 Sputtering 19
1.3.5 Rapid Quenching 22
1.4 Applications to Separations and Reactions 25
1.4.1 Microfiltrations and Ultrafiltrations 26
1.4.2 Gas Separations 28
1.4.2.1 Knudsen Regime 28
1.4.2.2 Surface Diffusion Regime 29
1.4.2.3 Capillary Condensation Regime 30
1.4.2.4 Activated Diffusion Regime 31
1.4.2.5 Molecular Sieving Regime 31
1.4.2.6 Dissociative Solution and Diffusion Regime 34
1.4.2.7 Ionic Conduction Regime 39
1.4.2.8 Mixed Ionic Conduction Regime 42

1.4.3 Membrane Reactors ····· 44
1.4.3.1 Catalytic Membrane Reactor ····· 44
1.4.3.2 Membrane Reactor without Catalyst ····· 45
1.4.3.3 Catalyst-packed Membrane Reactor ····· 46
1.4.4 Reaction Coupling in Membrane Reactors ····· 48
1.4.5 Fuel Cells ····· 49
1.5 Summary ····· 49
References ····· 50

2 Sol-Gel Thin Films Synthesis and Properties of Sorbents and Catalysts ····· 53
Y.S.Lin

2.1 Introduction ····· 53
2.1.1 Catalysts and Adsorbents ····· 53
2.1.2 Sol-Gel Process ····· 55
2.2 Sol-Gel Derived Materials for Adsorbents and Catalysts ····· 58
2.2.1 Crystalline Materials ····· 58
2.2.2 Noncrystalline Materials ····· 61
2.3 Sol-Gel Granulation Process ····· 65
2.3.1 Granulation Processes ····· 65
2.3.2 Sol-Gel Preparation of Alumina Granular Particles ····· 67
2.3.3 Physical Properties ····· 70
2.4 Sol-Gel-Derived Granular Adsorbents/Catalysts ····· 74
2.4.1 Synthesis of Adsorbents/Catalysts ····· 74
2.4.2 Sorption Properties ····· 78
2.5 Conclusions ····· 82
References ····· 83

3 Ferroelectric Thin Films and Applications ····· 86
Cuozhong Cao

3.1 Introduction ····· 86
3.2 Charge Displacement and Spontaneous Polarization ····· 87
3.3 Hysteresis ····· 91
3.4 The Curie Point and the Phase Transition ····· 94
3.5 Ferroelectric Thin Films for DRAM and NvRAM ····· 97
3.6 Deposition of Ferroelectric Thin Films ····· 103
3.7 Summary ····· 109
References ····· 110

4 Metalorganic Chemical Vapor Deposition of Ferroelectric Thin Films **114**
Ren Xu

4.1 Overview of Precursor Compounds 114
4.1.1 Background 114
4.1.2 Precursor Preparations 116
4.1.3 Recent Advances 117
4.1.4 Ultimate Role of Precursor Compound 122
4.2 Theoretical Possibility of Autostoichiometric Vapor Deposition ... 122
4.2.1 Stoichiometry of MOCVD 122
4.2.2 Autostoichiometric Vapor Deposition 125
4.2.3 Examples of Precursors 125
4.2.4 Autostoichiometric Reactions 126
4.2.5 Deposition Apparatus 128
4.2.6 Mass Flow and Rate Analysis 129
4.2.7 Stoichiometry Factor 130
4.3 Stoichiometry of Vaporization Processes 132
4.3.1 Background 132
4.3.2 Physical Chemistry of Evaporation Processes 134
4.3.3 Experimental Assessment of Evaporation Stoichiometry ... 136
4.3.3.1 Vapor Pressure Measurement 136
4.3.3.2 Sublimation/Distillation 136
4.3.3.3 Composition Analysis and Decomposition Equilibrium 137
4.3.3.4 Deposition of Multicomponent Oxide Thin Films 138
4.3.4 Experimental Results 138
4.3.4.1 Thermal Stability of Double Alkoxides 139
4.3.4.2 Resolved Vapor Pressure of Double Alkoxides ... 140
4.4 Autostoichiometric Vapor Deposition 141
4.4.1 Deposition of $LiTaO_3$ from $LiTa(i\text{-}OC_4H_9)_6$ 141
4.4.2 Deposition of $LiNbO_3$ from $LiNb(n\text{-}OC_4H_9)_6$ 144
4.4.3 Deposition of $LiTaO_3$ from $LiTa(n\text{-}OC_4H_9)_6$ 146
4.4.3.1 Experimental 147
4.4.3.2 Results 149
References 156

5 Functional Nanocomposite Thin Films by Co-Sputtering **159**
Feng Niu

5.1 Introduction 159

5.2 Classification of Nanocomposite Films, Their Properties and Applications ····· 160
5.3 Optical Properties of Small Particles Embedded in Different Matrixes ····· 164
5.3.1 Definition of the Optical Constants of Matter ····· 164
5.3.2 Classic Mie Theory for Scattering and Absorption of Small Spherical Particles ····· 165
5.3.2.1 General Formula ····· 165
5.3.2.2 Small Spherical Particles ····· 167
5.3.2.3 Concentric Particles (Coated Spheres or Composite Spheres) ····· 168
5.3.3 Simulation of Optical Properties of Nanocomposite Materials by the Effective-Medium Theories (EMTs) ····· 168
5.3.3.1 Introduction ····· 168
5.3.3.2 Various Effective-Medium Theories and Random Unit Cells(RUCs) ····· 169
5.3.3.3 Limitation of the Effective-Medium Theories ····· 172
5.3.4 The Bergman-Milton Theory of the "Bounds" on the Dielectric Constant of Inhomogeneous Media ····· 176
5.3.5 Optical Properties of Metals in the Near UV, Visible and Near IR Regions ····· 177
5.3.5.1 Determination of the Dielectric Function of Small Metal Particles ····· 177
5.3.5.2 The Surface Plasma Resonance Absorption (PRA) on Small Metal Particles ····· 178
5.3.5.3 Limitation of the Mean Free Path (MFP) by Small Particle Boundary Scattering ····· 178
5.3.5.4 Optical Properties of Pure Metals ····· 179
5.4 Electronic Transport Characteristics of Nanocomposites ····· 183
5.4.1 Electronic Transport Properties in Amorphous Semiconductors ····· 183
5.4.2 Electronic Transport in Granular Metal Films (Cermet Films) ····· 185
5.4.2.1 Conductivity in the Metallic Regime ····· 186
5.4.2.2 Conductivity in the Dielectric Regime ····· 187
5.4.3 Electronic Transport in Metal/Semiconductor Systems ····· 189
5.4.3.1 Schottky Barrier (SB) Contact ····· 189
5.5 Quantum Size Effects of Small Metal Particles ····· 190
5.5.1 Introduction ····· 190
5.5.2 Quantum Size Effect (QSE) on the Optical Properties of Small Metal Particles ····· 192
5.6 Preparation of Nanocomposite Thin Film by Co-Sputtering ····· 193

5.7 Microstructure, Optical and Electronic Transport Properties of Si-Ag Nanocomposite Thin Films ····· 195
5.7.1 Introduction ····· 195
5.7.2 Determination of the Film Composition, Thickness and Mean Ag Particle Size ····· 196
5.7.3 Microstructural Characterization ····· 197
5.7.3.1 X-ray Diffraction (XRD) ····· 197
5.7.3.2 Conventional TEM Results ····· 198
5.7.3.3 HREM Results ····· 201
5.7.4 The Effect of Substrate Temperature ····· 203
5.7.5 Optical Properties in the Near UV, Visible and Near IR ····· 203
5.7.5.1 Optical Absorption in the Near UV, Visible and Near IR ····· 203
5.7.5.2 The Effects of Substrate Temperature ····· 203
5.7.5.3 Determination of Optical Constants of the Thick Film at 632.8nm ····· 203
5.7.6 Electronic Transport Properties ····· 206
5.7.6.1 Sheet Resistance of the Thin Films as a Function of Ag Content ····· 206
5.7.6.2 Sheet Resistance as a Function of Temperature ··· 207
5.7.7 Discussion ····· 209
5.7.7.1 Simulations of Optical Absorption by the Different EMTs ····· 209
5.7.7.2 Electronic Transport Properties ····· 213
References ····· 216

6 Strength and Toughness of Functional Ceramic Matrix ····· 219
Yongjian Sun

6.1 Introduction ····· 219
6.2 Overview of Composite Technologies ····· 221
6.2.1 Mechanical and Interfacial Behavior of FCMCs ····· 223
6.2.1.1 Mechanical Behavior of FCMCs ····· 223
6.2.1.2 Fundamentals of Fiber/Matrix Interface ····· 225
6.2.2 Processing of Ceramic Matrix Composites ····· 229
6.2.2.1 Diversity of Processing Methods ····· 229
6.2.2.2 Processing Methods for Glass Composites ····· 231
6.2.3 Strengthening and Toughening Mechanisms in FCMCs ····· 232
6.2.3.1 Mechanisms of Strengthening in FCMCs ····· 232
6.2.3.2 Mechanisms of Toughening in FCMCs ····· 238
6.3 Objectives and Approaches ····· 249
6.4 An Unconventional Process of Glass Composites ····· 250
6.4.1 Fabrication of Glass Composites ····· 250
6.4.1.1 Selection of Materials ····· 250

6.4.1.2 Fabrication Procedures 251
6.4.2 Microstructure of Composites 253
6.4.2.1 Density, Uniformity and Transparency of Composites 253
6.4.2.2 Influences of Processing Parameters 255
6.4.3 Testing Techniques 257
6.5 Mechanical and Interfacial Properties of Composites 260
6.5.1 Mechanical Behavior of Composites 260
6.5.1.1 Load-Displacement Responeses 261
6.5.1.2 Mechanical Properties of Glass and Composites 261
6.5.2 Fiber/Matrix Interfacial Properties 265
6.5.2.1 Fiber Pushout Tests 265
6.5.2.2 Measurement of Matrix Crack Spacing 270
6.6 Micromechanisms of Multiple Matrix Cracking and Interfacial Debonding 271
6.6.1 In-situ Analysis of Matrix Cracking and Interfacial Debonding 271
6.6.1.1 Multiple Matrix Cracking 273
6.6.1.2 Interfacial Debonding 275
6.6.1.3 Interaction between the Matrix Cracks and Interfacial Debond 277
6.6.2 A New Theoretical Model for Interfacial Debonding 279
6.6.2.1 Stress Distribution in a Composite Unit 280
6.6.2.2 Displacement Calculations 281
6.6.2.3 Energy Balance Approach for Bridging-Stress Calculation 282
6.7 A Novel Technique for Studying Fiber Reinforcement 287
6.7.1 Determination of Fiber-Bridging Stress by Debond Length Measurement 287
6.7.1.1 Techniques for Determining Fiber-Bridging Stress 288
6.7.1.2 Debond Length and COD Profiles 290
6.7.1.3 Predicted and Measured COD Profiles 292
6.7.1.4 Fiber-Bridging Stress Distributions 294
6.7.2 Contribution of Fiber-Bridging to Fracture Toughness 297
6.7.2.1 SENB Test, DLM and COD Measurements 297
6.7.2.2 Debond Length and COD Profiles 298
6.7.2.3 Determination of Fiber-Bridging Stress 300
6.7.2.4 Determination of Fracture Toughness 304
6.8 Summary 307
References 308

7 Applications of HRTEM in Functional Materials **312**
Xiaojing Wu

7.1 Theory of High Resolution Transmission Electron Microscopy (HRTEM) 312
7.1.1 Phase Contrast 312
7.1.2 Weak-Phase Object Approximation 315
7.1.3 Multislice Method 317
7.1.4 Pseudo-Weak-Phase Object Approximation 319
7.1.5 Resolving Power of Phase Contrast 320
7.1.5.1 Point-to-Point Resolving Power 320
7.1.5.2 Information Limit 321
7.1.5.3 Line Resolving Power 321
7.2 What Can be Achieved by HRTEM? 322
7.2.1 Crystal Structure Determination 322
7.2.2 Microstructure and Defect Observation 325
7.2.3 Thin Film Structure Observation 325
7.3 Specimen Preparation 326
7.3.1 Crushing Method 326
7.3.2 Ion-Milling Method 327
7.3.3 Electropolishing Method 328
7.4 Applications of HRTEM for High T_c Superconducting Cuprates 328
7.4.1 Structure Determination of $(Hg,Tl)_2Ba_2(Hg,Tl)Cu_2O_y$ in a Multiphase Sample 330
7.4.2 Superstructure Formed by Oxygen Vacancies in (Bi,Pb)-2223 335
7.4.3 Modulation Structure Determination for "Pb"-1212 and "Pb"-1223 340
7.5 New Developments in HRTEM 349
References 351

8 Applications of Convergent-Beam Electron Diffraction in Materials Microcharacterization **354**
Renhui Wang and Huamin Zou

8.1 Introduction 354
8.2 Experimental Technique 355
8.3 Convergent-Beam Electron Diffraction under Two-Beam Dynamic Condition—Determination of Foil Thickness and Extinction Distance 359
8.3.1 Two-Beam Dynamic Theory of Electron Diffraction 359
8.3.2 CBED Determination of Rocking Curves 361

8.3.3 CBED Determination of Foil Thickness and Extinction Distance ····· 363
8.4 Convergent-beam Electron Diffraction under Kinematic Condition—Higher-Order Laue Zone Lines ····· 365
8.4.1 Formation of HOLZ Lines ····· 365
8.4.2 Indexing and Computer Simulation of HOLZ Line Patterns ····· 367
8.4.3 Factors Affecting the Quality of a HOLZ Line Pattern ····· 368
8.4.4 Some Applications of HOLZ Reflections and HOLZ Lines ····· 370
8.4.4.1 Determination of Lattice Constants of Micro-areas ····· 370
8.4.4.2 Determination of Crystallographic Symmetry ····· 371
8.4.4.3 Determination of Crystal Structure Parameters ··· 371
8.4.4.4 Determination of Characteristic Parameters of Defects ····· 371
8.5 Convergent-Beam Electron Diffraction Determination of Crystal Symmetry ····· 372
8.5.1 Symmetry Elements That Can Be Determined by CBED Technique ····· 372
8.5.2 Thirty One Diffraction Groups and Their CBED Determination ····· 374
8.5.3 CBED Determination of Point Groups ····· 383
8.6 Convergent-Beam Electron Diffraction Determination of Burgers Vectors of Dislocations in Crystals and Quasicrystals ····· 383
8.6.1 Twisting Direction of a Reflection Fringe Induced by a Dislocation Line ····· 383
8.6.2 Number of Nodes in the Split Reflection Fringes Induced by a Dislocation Line ····· 387
8.6.3 Defocus CBED Technique for Determining Burgers Vectors of Dislocations in Crystals ····· 388
8.6.4 Defocus CBED Technique for Determining Burgers Vectors of Dislocations in Quasicrystals ····· 391
8.7 Convergent-Beam Electron Diffraction Determination of Crystal Structures ····· 393
8.7.1 Many-Beam Dynamic Theory of Electron Diffraction ····· 393
8.7.2 Structure Factor Determination by Means of CBED Technique ····· 395
8.8 CBED Study of Interfacial Strain Fields ····· 397
8.8.1 Interfacial Strain Determination by Using HOLZ Line Shifting ····· 397
8.8.1.1 Factors Affecting HOLZ Line Position ····· 397

8.8.1.2 Methods for Determining Lattice Strain from HOLZ Line Shifts 400
8.8.2 Interfacial Strain Determination by Using HOLZ Line Splitting 405
References 408

9 Numerical Simulations for Micromechanical Analyses of Fiber-Reinforced Composites, Thin Films and Coatings 410
Yijun Liu

9.1 Introduction 410
9.1.1 Numerical Simulations in Materials Research 411
9.1.2 The Finite Element Method (FEM) 412
9.1.3 The Boundary Element Method (BEM) 412
9.2 Formulation of the Boundary Element Method 413
9.2.1 The Governing Equations 413
9.2.2 The Boundary Integral Equation Formulation 414
9.3 Micromechanical Analysis of Fiber-Reinforced Composites with Interphases 416
9.3.1 Review of the Research 416
9.3.2 Two Unit Cell Models with the Interphase 421
9.3.3 Numerical Examples 424
9.3.4 Discussion 429
9.4 Interface Stress Analysis of Thin Films and Coatings 430
9.4.1 A Thin Film Model 430
9.4.2 Thin Coatings on a Shaft 431
9.4.3 Discussion 433
9.5 Closing Remarks 434
9.6 Acknowledgment 435
References 435
