

Table of Contents

Introduction: The History of Automated Reasoning	1
1. Basic Notions and Results	7
1.1 Basic Notions of Algebra	7
1.2 Finite Algebras.....	14
1.3 Completeness of Function Sets	21
1.4 Some Properties of the Sets Z_n	33
2. Gentzen Systems for n-Valued Logical Calculi	39
2.1 General Remarks	39
2.2 Some Identities in Post Algebras	39
2.3 A Language for the n -Valued Logical Calculus and Its Semantics	43
2.4 A Gentzen System for the n -Valued Propositional Calculus	44
2.5 An Alternative Gentzen System for Finite-Valued Logics	54
2.6 A Gentzen System for the n -Valued First-Order Predicate Calculus.....	56
2.7 Completeness of the Sequential Predicate Calculus	69
3. Multisequent Systems of Takahashi and Rousseau for Finite-Valued Logics	71
3.1 Notational Remarks	71
3.2 Many-Valued Propositional Calculi	71
3.3 Many-Valued Predicate Calculus	75
3.4 Gentzen–Takahashi Systems for Finite-Valued Logics.....	82
3.5 A Gentzen System for a Particular Class of Finite-Valued Logics	90
4. The Resolution Principle in n-Valued Logics	99
4.1 Historical Remarks	99
4.2 The Language of Multi-Valued Predicate Calculus	100
4.3 A Supplement on the Semantics	101
4.4 Unifying Substitutions	102
4.5 Resolution Proof Systems for Finite-Valued Propositional Logics	104

5. Minimization Problems in Resolution Proof Systems	117
5.1 A Supplement on Propositional Calculi	117
5.2 Semantic Trees	119
5.3 Proof Trees	120
5.4 More About Resolution Proof Systems	121
5.5 Matrices Induced by Resolution Proof Systems	124
5.6 Minimal Resolution Proof Systems	131
5.7 Disjunctive Logics	137
5.8 Polarization	139
6. Resolution in Finite-Valued First-Order Predicate Calculi	149
6.1 Introductory Remarks and Supplements to Semantics	149
6.2 Some Identities in Finite Post Algebras	149
6.3 Satisfiability Theorems	154
6.4 Canonical Models for n -Valued Logics	160
6.5 The Resolution Principle for the n -Valued Predicate Calculus	164
7. Overview of Applications	169
7.1 Software Specification and Verification	172
7.1.1 Motivation	172
7.1.2 Analytic Tableau Method	173
7.1.3 Conclusions	179
7.2 Interval Arithmetic	179
7.2.1 Introduction	179
7.2.2 \mathbf{GL}_3 Logic	180
7.2.3 Definition of \mathcal{I} System and Its Properties	183
7.2.4 Axiomatization \mathcal{A}	185
7.2.5 Conclusions	187
7.3 Verification of Electronic Circuits	191
7.3.1 Introduction	191
7.3.2 Logic	194
7.3.3 Example	196
7.3.4 Conclusions	197
8. Selected Applications of Fuzzy Set Theory	199
8.1 Introduction	199
8.2 Basic Definitions	200
8.3 Operations on Fuzzy Sets and Fuzzy Relations	204
8.3.1 Union and Intersection of Sets	204
8.3.2 Complement of a Set	207
8.3.3 Composition of Relations	208
8.3.4 Fuzzy Modifiers	209

8.3.5	The Extension Principle	211
8.3.6	Lattice Fuzzy Sets	218
8.3.7	Fuzzy Logics as Generalized Many-Valued Logics	225
8.3.8	Fuzzy Logics as Linguistic Logics	227
8.3.9	A Generalization of the Modus Ponens Rule	230
9.	Selected Applications of Rough Set Theory	249
9.1	Introduction	249
9.2	Approximate Knowledge and Rough Sets	250
9.2.1	Knowledge Base	250
9.2.2	Knowledge Approximation	253
9.2.3	Degrees of Knowledge Accuracy	254
9.3	Knowledge Reduction	255
9.3.1	Knowledge Reduct and Kernel	255
9.3.2	Category Reduction	258
9.3.3	Dependencies in a Knowledge Base	260
9.4	Knowledge Representation Systems	261
9.5	Inference from Rough Knowledge	264
9.5.1	Introduction	264
9.6	Decision Logic	267
9.6.1	Language of Decision Logic	267
9.6.2	Semantics of Decision Logic	268
9.6.3	Inference	271
9.6.4	Decision Algorithms	272
9.7	Reduction of Decision Algorithms	274
	Bibliography	289
	Index	299

Many-Valued Logics 2

Automated Reasoning and Practical Applications

Bolc, L.; Borowik, P.

2003, XI, 303 p., Hardcover

ISBN: 978-3-540-64507-8
