

Contents

1	Introduction	1
1.1	Stochastic Analogs of Classical Differential Equations	1
1.2	Filtering Problems	2
1.3	Stochastic Approach to Deterministic Boundary Value Problems	3
1.4	Optimal Stopping	3
1.5	Stochastic Control	4
1.6	Mathematical Finance	4
2	Some Mathematical Preliminaries	7
2.1	Probability Spaces, Random Variables and Stochastic Processes	7
2.2	An Important Example: Brownian Motion	12
	Exercises	15
3	Itô Integrals	21
3.1	Construction of the Itô Integral	21
3.2	Some properties of the Itô integral	30
3.3	Extensions of the Itô integral	34
	Exercises	37
4	The Itô Formula and the Martingale Representation Theorem	43
4.1	The 1-dimensional Itô formula	43
4.2	The Multi-dimensional Itô Formula	48
4.3	The Martingale Representation Theorem	49
	Exercises	55
5	Stochastic Differential Equations	65
5.1	Examples and Some Solution Methods	65
5.2	An Existence and Uniqueness Result	70

5.3	Weak and Strong Solutions	74
	Exercises	76
6	The Filtering Problem	85
6.1	Introduction	85
6.2	The 1-Dimensional Linear Filtering Problem	87
6.3	The Multidimensional Linear Filtering Problem	107
	Exercises	108
7	Diffusions: Basic Properties	115
7.1	The Markov Property	115
7.2	The Strong Markov Property	118
7.3	The Generator of an Itô Diffusion	124
7.4	The Dynkin Formula	127
7.5	The Characteristic Operator	129
	Exercises	131
8	Other Topics in Diffusion Theory	141
8.1	Kolmogorov's Backward Equation. The Resolvent	141
8.2	The Feynman-Kac Formula. Killing	145
8.3	The Martingale Problem	148
8.4	When is an Itô Process a Diffusion?	150
8.5	Random Time Change	156
8.6	The Girsanov Theorem	162
	Exercises	171
9	Applications to Boundary Value Problems	181
9.1	The Combined Dirichlet-Poisson Problem. Uniqueness	181
9.2	The Dirichlet Problem. Regular Points	185
9.3	The Poisson Problem	197
	Exercises	204
10	Application to Optimal Stopping	213
10.1	The Time-Homogeneous Case	213
10.2	The Time-Inhomogeneous Case	226
10.3	Optimal Stopping Problems Involving an Integral	230
10.4	Connection with Variational Inequalities	232
	Exercises	237
11	Application to Stochastic Control	243
11.1	Statement of the Problem	243
11.2	The Hamilton-Jacobi-Bellman Equation	245
11.3	Stochastic control problems with terminal conditions	259
	Exercises	261

12 Application to Mathematical Finance	269
12.1 Market, portfolio and arbitrage.....	269
12.2 Attainability and Completeness	279
12.3 Option Pricing	287
Exercises	308
Appendix A: Normal Random Variables	315
Appendix B: Conditional Expectation	319
Appendix C: Uniform Integrability and Martingale Convergence	323
Appendix D: An Approximation Result	327
Solutions and Additional Hints to Some of the Exercises	331
References	363
List of Frequently Used Notation and Symbols	373
Index	377

Stochastic Differential Equations

An Introduction with Applications

Øksendal, B.

2003, XXVII, 379 p., Softcover

ISBN: 978-3-540-04758-2
