
Contents

Historical and Current Concepts of the Mechanisms of Aging	1
1.1 Rate of Living	2
1.2 Endocrine Theory	3
1.3 Weismann's Theory	6
1.4 The Immune Theory	12
1.5 Cross-Linking	13
1.6 Free Radicals	14
1.7 Aging and Evolution	19
 Basic Determinants of Longevity	 25
2.1 Energy Intake and Expenditure	25
2.2 The Storage and Flow of Information	30
2.3 Redundancy	35
2.3.1 Cellular Redundancy	35
2.3.2 Molecular Redundancy	37
2.4 Genetics of Aging	38
2.4.1 Species Longevity	39
2.4.2 The Preordained Ontogeny of the Organism	47
2.4.3 Parental Longevity	48
2.4.4 Longevity of Twins	48
2.4.5 Sex and Longevity	49
2.4.6 Syndromes of "Premature Aging"	50
2.4.7 Hybrid Vigor (Heterosis)	53
2.4.8 The Search for Longevity Genes	53
2.4.8.1 Lower Organisms Along the Evolutionary Scale	53
2.4.8.2 Higher Organisms Along the Evolutionary Scale	57
 Aging of the Mammalian Organism	 61
3.1 Cellular Aging	61
3.1.1 Germ Line Cells	61
3.1.2 Stem Cells	63
3.1.3 Mitotic Cells	66
3.1.3.1 Kinetics of the Decline of Proliferation of Cell Compartments	71

3.1.3.2	Mechanisms of the Decline of the Proliferative Potential	85
3.1.3.3	Relevance of the Findings in Vitro for Aging of the Organism	105
3.1.4	Postmitotic and Slowly Renewable Cells	109
3.2	Connective Tissue	115
3.3	The Structural Reorganization of the Mammalian Organism	122
Neoplastic Growth Through the Human Life Span		129
4.1	The Clinical Age – Incidence of Neoplastic Disease	129
4.2	The Heterogeneity of Neoplastic Growth	136
4.3	Initiation of Neoplastic Growth at the Cellular Level	140
4.4	Progression of Neoplastic Disease	144
4.5	Age-Dependent Sensitivity to Carcinogens	145
4.6	Deviations from Normal Development and Neoplastic Growth	146
The Centenarians		151
