Contents

1. The Theory of Generalized Functional Models 1
1.1 The Theory of Hints on Finite Frames 1
1.1.1 Definition of a Hint and its Associated Functions 2
1.1.2 Combination of Hints 5
1.1.3 Mass functions and gem-functions 7
1.1.4 Dempster Specialization Matrices 10
1.1.5 A Representation of the Dempster Specialization Matrix 11
1.1.6 Combining Several Hints 12
1.2 Application 13
1.3 The Combination of Closed Hints 14
1.4 The Theories of Bayes and Fisher 18
1.4.1 Jessica's Pregnancy Test 18
1.4.2 The Solution of Bayes 18
1.4.3 The Solution of Fisher 19
1.5 The Definition and Analysis of a Generalized Functional Model 21
1.6 Generalized Functional Models and Hints 24
1.7 Examples of Generalized Functional Models 26
1.7.1 Jessica's Pregnancy Test 26
1.7.2 Policy Identification (I) 28
1.7.3 Policy Identification (II) 31
1.8 Prior Information 33

2. The Plausibility and Likelihood Functions 39
2.1 The Likelihood Ratio as a Weight of Evidence 39
2.2 The Weight of Evidence for Composite Hypotheses 40
2.3 Functional and Distribution Models 43
2.3.1 The Distribution Model of the Problem 43
2.3.2 A GFM Obtained by Conditional Embedding 44
2.3.3 A GFM Inspired by Dempster's Structures of the First Kind 46
2.4 Evidence About a Survival Rate 49
2.5 Degrees of Support as Weights of Evidence 55

3. Hints on Continuous Frames and Gaussian Linear Systems 59
3.1 Continuous Hints ... 59
3.2 Gaussian Hints ... 62
3.3 Precise Gaussian Hints ... 64
3.4 Gaussian Linear Systems ... 68

4. Assumption-Based Reasoning with Classical Regression Models ... 71
4.1 Classical Linear Regression Models as Special Gaussian Linear Systems ... 71
4.2 The Principle of the Inference ... 72
4.3 The Result of the Inference ... 76
4.4 Changing Basis ... 79
4.5 Permissible Bases and Admissible Matrices ... 82
4.6 Different Representations of the Result of the Inference ... 86
4.6.1 A Representation Derived from Linear Dependencies ... 86
4.6.2 A Representation Derived from a Special Class of Admissible Matrices ... 88
4.7 Full Rank Matrices T_2 such that $T_2 A = 0$ ... 90
4.7.1 A Matrix Based on Linear Dependencies ... 90
4.7.2 A Matrix Based on the Householder Method ... 91
4.7.3 A Matrix Based on Classical Variable Elimination ... 91
4.7.4 A Matrix Based on a Generalized Inverse of A ... 93

5. Assumption-Based Reasoning with General Gaussian Linear Systems ... 97
5.1 The Principle of the Inference ... 97
5.2 The Gaussian Hint Inferred from a Gaussian Linear System of the First Kind ... 98
5.3 The Gaussian Hint Inferred from a Gaussian Linear System of the Second Kind ... 99
5.4 The Gaussian Hint Inferred from a Gaussian Linear System of the Third Kind ... 104
5.5 The Gaussian Hint Inferred from a Gaussian Linear System of the Fourth Kind ... 105
5.6 Canonical Proper Potentials ... 106

6. Gaussian Hints as a Valuation System ... 109
6.1 Shenoy-Shafer's Axiomatic Valuation Systems ... 109
6.2 Marginalization of Gaussian Hints ... 110
6.2.1 Marginalization of a Precise Gaussian Hint ... 111
6.2.2 Marginalization of a Non-Precise Gaussian Hint ... 112
6.3 Vacuous Extension of Gaussian Hints ... 117
6.4 Transport of Gaussian Hints ... 117
6.5 Projection and Composition of Potentials ... 118

6.6 Combination of Gaussian Hints Defined on the Same Domain 121
6.7 Computation of Combined Gaussian Hints 123
6.7.1 Combination when the Composed Potential is of the Third Kind 123
6.7.2 Combination with a Precise Gaussian Hint 124
6.7.3 Combination of Two Precise Gaussian Hints 125
6.7.4 Combination when the Composed Potential is of the First Kind 126
6.8 Combination of Hints Defined on Arbitrary Domains 127

7. Local Propagation of Gaussian Hints 129
7.1 The Axioms of Shenoy and Shafer 130
7.2 The Local Propagation Algorithm 133

8. Application to the Kalman Filter 137
8.1 Definition of the Random System 137
8.2 Derivation of the Kalman Filter 138
