

Contents

1 Introduction

H. Masuhara	1
1.1 From Microparticles to Nanoparticles	1
1.2 Importance of Organic Nanoparticles	2
1.3 Single Microparticle Analysis	5
1.4 Micrometer Size Effects in Chemistry	7
1.5 New Methods for Studying Single Nanoparticles and Nanometer Size Effects	9
1.6 Preparation of Organic Nanoparticles	10
1.7 Applications and Perspectives	11
References	14

Part I Preparation of Nanoparticles

2 Reprecipitation Method for Organic Nanocrystals

H. Nakanishi, H. Oikawa	17
2.1 Introduction	17
2.2 Preparation of Organic Nanocrystals by the Reprecipitation Method	18
2.3 Size- and Shape-Controlled Polydiacetylene Nanocrystals and their Formation Mechanism	24
2.4 Summary and Future Scope	29
References	30

3 Laser Ablation Method for Organic Nanoparticles

H. Masuhara, T. Asahi	32
3.1 Introduction	32
3.2 Laser Ablation in Solution	33
3.3 Nanoparticle Size Distribution	34
3.4 Nanoparticles Formation Process	35
3.5 Nanoparticle Formation Mechanism	38
3.6 Phase Transition Nanoparticles	40
3.7 Summary and Future Scope	42
References	43

4 Synthesis of Functionalized Polymer Particles

H. Kawaguchi	44
4.1 Introduction	44
4.2 Particle Formation and Growth	44
4.3 Hydrogel Particles: Preparation and Modification	46
4.4 Thermosensitive Particles	48
4.5 Summary and Future Scope	52
References	52

5 Synthesis of Photosensitive Dendrimer Molecules

K. Horie	54
5.1 Introduction	54
5.2 Dendrimers as Nano-organized Particles	54
5.3 Dendrimers with Photosensitive Chromophores in a Core and Dendrons	57
5.4 Summary and Future Scope	66
References	67

Part II Spectroscopy and Manipulation

6 Electrodynamic Trap of Single Microparticles

M. Kotani	71
6.1 Introduction	71
6.2 Ion Trap	73
6.3 Generation of Microparticles by an Electrospray	75
6.4 Optical Interference in a Microparticle	76
6.5 Crystal Growth from Microdroplets	78
6.6 Fluorescence from a Microparticle	79
6.7 Summary and Future Scope	81
References	81

7 Lasing Spectroscopy of Single Microspheres

H. Fujiwara, K. Sasaki	82
7.1 Introduction	82
7.2 Cavity Quantum Electrodynamics Effect	83
7.3 Microspherical Lasing	85
7.4 Upconversion Lasing within a Microsphere	86
7.5 Photon Tunneling and Lasing Microspherical Probe	89
7.6 Summary and Future Scope	92
References	92

8 Microspectroscopy of Single Nanoparticles

T. Asahi, H. Masuhara	94
8.1 Introduction	94
8.2 Scanning Near-Field Fluorescence Microscopy	95
8.3 Rayleigh Scattering Microscopy	98
8.4 Summary and Future Scope	107
References	108

9 Force Measurement for a Single Nanoparticle

K. Sasaki	109
9.1 Introduction	109
9.2 Observation of Radiation Pressure	110
9.3 Radiation Pressure of an Evanescent Field	114
9.4 Absorption Spectroscopy Based on Radiation Pressure	116
9.5 Summary and Future Scope	119
References	120

10 Laser Manipulation of Single Nanoparticles

H. Masuhara	121
10.1 Introduction	121
10.2 Principle of Laser Trapping and Manipulation of Nanoparticles ...	122
10.3 Photochemical Fixation of Individual Polymer Nanoparticles	124
10.4 Patterning and Fixation of Multiple Polymer Nanoparticles	124
10.5 Photothermal Fixation and Patterning of Individual Gold Nanoparticles	127
10.6 Summary and Future Scope	130
References	131

Part III Theory of Optical Interactions

**11 Optical Spectrum of a Confined Exciton in a Sphere:
A Prototype of Advanced Analyses**

H. Ajiki, K. Cho	135
11.1 Introduction	135
11.2 Microscopic Nonlocal Theory	137
11.3 Exciton States	139
11.4 Exciton–Light Coupled Mode	141
11.5 Optical Scattering Spectra	143
11.6 Summary and Future Scope	145
References	146

12 Optical Manipulation of Single Nanoparticles Under a Resonance Condition

H. Ishihara, K. Cho	147
12.1 Introduction	147
12.2 Theoretical Method and Model Calculation	148
12.3 Frequency and Size Dependent Force.....	149
12.4 Nanoparticle in a Standing Wave	152
12.5 Summary and Future Scope	154
References	154

13 Low-Dimensional Eexcitons in Aromatic Nanoparticles

K. Mizuno, M. Takeshima, A. H. Matsui	156
13.1 Introduction	156
13.2 Instability of Self Trapped-Exciton States	157
13.3 Enhancement of Exciton Bandwidth	160
13.4 Abrupt Change of the Exciton Bandwidth at a Critical Size	162
13.5 Summary and Future Scope	165
References	166

Part IV Physics and Chemistry of Nanoparticles

14 Optical Properties of Polymer Nanocrystals

H. Oikawa, H. Nakanishi	169
14.1 Introduction	169
14.2 Crystal Size Dependence of Linear Optical Properties	169
14.3 Metal-Coated Organic Nanocrystals	176
14.4 Fabrication of Thin Films of Layered Organic Nanocrystals	178
14.5 Enhanced Nonlinear Optical Properties	180
14.6 Summary and Future Scope	182
References	183

15 Photophysics of Capped Nanocrystals and Molecular J-Aggregates

T. Tani	185
15.1 Introduction	185
15.2 Organic-Inorganic Hybrid CdSe Nanocrystals	186
15.3 Molecular J-Aggregates	191
15.4 Microscopy with Solid Imersion Gradient Index Microlens	197
15.5 Summary and Future Scope	201
References	201

16 Near-field Microspectroscopy and Microprocessing of Individual Perylene Microcrystals

T. Itoh	203
16.1 Introduction	203
16.2 Near-field Microspectroscopy of Individual Perylene Microcrystals	204
16.3 Near-field Microprocessing of Individual Perylene Microcrystals ..	207
16.4 Application to Double-Layered Microcrystals.....	209
16.5 Summary and Future Scope	211
References	212

17 Photochemical Dynamics of Fullerene Nanoparticles

M. Fujitsuka, O. Ito	213
17.1 Introduction	213
17.2 Photoexcitation of Organic Nanoparticles.....	214
17.3 Photophysical and Photochemical Processes of Fullerene Nanoparticles	215
17.4 Photoinduced Charge Separation and Recombination Processes ..	220
17.5 Summary and Future Scope	223
References	224

18 Structural Relaxation of Dendrimers and Polymer Nanoparticles with Single Chromophores

K. Horie	225
18.1 Introduction	225
18.2 Photochemical Hole Burning of Unimacromolecular Micelles with a Single Chromophore Inside	227
18.3 Photochemical Hole Burning of Dendrimers with a Porphyrin Core	232
18.4 Summary and Future Scope	239
References	239

19 Photophysical Properties of Semiconductor Nanocrystals

K. Edamatsu, T. Itoh	241
19.1 Introduction	241
19.2 Resonant Exciton Luminescence of CuCl Nanocrystals	242
19.3 Two-photon Microphotoluminescence Study of CuCl Nanocrystals	248
19.4 Summary and Future Scope	250
References	251

20 Electronic States of Chemically Modified CdS Nanoparticles

Y. Nosaka.....	253
20.1 Introduction	253

20.2 Linking Nanoparticles at a Liquid–Liquid Interface	254
20.3 Electronic States of CdS Clusters	256
20.4 Effect of Phenyl Capping on the Electronic States	259
20.5 Molecular Orbital Approach to Nanoparticle Dimers	261
20.6 Summary and Future Scope	263
References	263

Part V Physics and Chemistry of Liquid Droplets

21 Photoredox Chemistry of Single Microdroplets in Water

F. Kitagawa, N. Kitamura	267
21.1 Introduction	267
21.2 Photoredox Chemistry in Oil-in-Water Emulsions	271
21.3 Photocyanation of Perylene in Single Microdroplets	279
21.4 Summary and Future Scope	282
References	283

22 Raman Spectroscopy of a Single Microdroplet

K. Ajito	285
22.1 Introduction	285
22.2 Laser Trapping and Near-infrared Raman Spectroscopy	286
22.3 Near-infrared Raman Spectroscopy of a Single Picoliter Droplet ..	288
22.4 Application to the Analysis of Single Nanoparticles and Cellular Organelles	292
22.5 Summary and Future Scope	295
References	296

23 Picoliter Droplets for Single-Particle and Single-Molecule Imaging

M. Ishikawa	297
23.1 Introduction	297
23.2 Spotting Droplets on a Surface	299
23.3 Tips on the Pulsed-Field Droplet Spotter	301
23.4 Imaging of Droplet Formation	302
23.5 Droplet Volume as a Function of the Pulse Voltage	303
23.6 Microarrays of Droplets and Nanoparticles	305
23.7 Summary and Future Scope	306
References	307

24 Auto-Oscillated Vibration of Single Oil Droplets

O. Kogi, N. Kitamura	309
24.1 Introduction	309
24.2 Characteristics of Auto-Oscillated Vibration	310

24.3 Oil/Surfactant Structure Formation and its Implication to Droplet Vibration.....	314
24.4 Summary and Future Scope	317
References	317

Part VI Materials Application and Future Perspective

25 Photon-Force Controlled Molecular Assembling in Solution

H. Masuhara	321
25.1 Introduction	321
25.2 Principle and Experimental Setup	322
25.3 Trapping of Nanometer Polymer Chains Leading to a Single Micrometer Particle	323
25.4 Minimum Size of the Trapped Polymer and Effective Molecular Parameters	328
25.5 Optical Potential Evolution and Chemical Equilibrium	329
25.6 Molecular Association and Orientation Structures Characteristic of the Photon Force	331
25.7 Manipulation of Assembly and Molecular Conformation of Dendrimers	333
25.8 Summary and Future Scope	338
References	339

26 Spectroscopic Analysis of Single Microparticles Under Solution-Flow Conditions

O. Kogi, N. Kitamura	341
26.1 Introduction	341
26.2 Microinjection–Microspectroscopy of Single Oil Droplets.....	342
26.3 Chemical Responses of Single Cells	348
26.4 Summary and Future Scope	354
References	354

27 Stimulus-Responsive Polymer Nanoparticles

K. Horie, H. Kawaguchi.....	356
27.1 Introduction	356
27.2 Dansyl-Labeled Core-Shell and Core-Hair Type Microspheres	356
27.3 Applications of Poly(<i>N</i> -isopropylacrylamide) Microspheres.....	364
27.4 Summary and Future Scope	367
References	368

28 Photonic Band Properties of Ordered Nanoparticle Layers

T. Itoh	369
28.1 Introduction	369
28.2 Preparation of Latex Nanoparticle Layers	369
28.3 Far-field Measurement of Photonic Band Effects	371
28.4 Near-field Measurement of Photonic Band Effects	374
28.5 Summary and Future Scope	378
References	380

29 Particle-Based Optical Devices

H. Oikawa, H. Nakanishi	382
29.1 Introduction	382
29.2 Optical Switching by the Fabry-Perot Optical Oscillator	382
29.3 Polar Nanocrystals Prepared by the Inverse Reprecipitation Method	384
29.4 Electric-Field-Induced Orientation of Polar Nanocrystals	386
29.5 Huge Dipole Moment of Polar Nanocrystals	387
29.6 Crystal Size Dependence of Electric-Field-Induced Orientation of Polar Nanocrystals	393
29.7 Summary and Future Scope	394
References	395
