

Contents

1	Univariate Linear Regression Model	1
<i>Ignacio Moral and Juan M. Rodriguez-Poo</i>		
1.1	Probability and Data Generating Process	1
1.1.1	Random Variable and Probability Distribution	2
1.1.2	Example	7
1.1.3	Data Generating Process	8
1.1.4	Example	12
1.2	Estimators and Properties	12
1.2.1	Regression Parameters and their Estimation	14
1.2.2	Least Squares Method	16
1.2.3	Example	19
1.2.4	Goodness of Fit Measures	20
1.2.5	Example	22
1.2.6	Properties of the OLS Estimates of α , β and σ^2	23
1.2.7	Examples	28
1.3	Inference	30
1.3.1	Hypothesis Testing about β	31
1.3.2	Example	34
1.3.3	Testing Hypothesis Based on the Regression Fit	35

1.3.4	Example	37
1.3.5	Hypothesis Testing about α	37
1.3.6	Example	38
1.3.7	Hypotheses Testing about σ^2	38
1.4	Forecasting	39
1.4.1	Confidence Interval for the Point Forecast	40
1.4.2	Example	41
1.4.3	Confidence Interval for the Mean Predictor	41
	Bibliography	42
2	Multivariate Linear Regression Model	45
	<i>Teresa Aparicio and Inmaculada Villanua</i>	
2.1	Introduction	45
2.2	Classical Assumptions of the MLRM	46
2.2.1	The Systematic Component Assumptions	47
2.2.2	The Random Component Assumptions	48
2.3	Estimation Procedures	49
2.3.1	The Least Squares Estimation	50
2.3.2	The Maximum Likelihood Estimation	55
2.3.3	Example	57
2.4	Properties of the Estimators	59
2.4.1	Finite Sample Properties of the OLS and ML Estimates of β	59
2.4.2	Finite Sample Properties of the OLS and ML Estimates of σ^2	63
2.4.3	Asymptotic Properties of the OLS and ML Estimators of β	66
2.4.4	Asymptotic Properties of the OLS and ML Estimators of σ^2	71

2.4.5	Example	72
2.5	Interval Estimation	72
2.5.1	Interval Estimation of the Coefficients of the MLRM . .	73
2.5.2	Interval Estimation of σ^2	74
2.5.3	Example	74
2.6	Goodness of Fit Measures	75
2.7	Linear Hypothesis Testing	77
2.7.1	Hypothesis Testing about the Coefficients	78
2.7.2	Hypothesis Testing about a Coefficient of the MLRM .	81
2.7.3	Testing the Overall Significance of the Model	83
2.7.4	Testing Hypothesis about σ^2	84
2.7.5	Example	84
2.8	Restricted and Unrestricted Regression	85
2.8.1	Restricted Least Squares and Restricted Maximum Like- lihood Estimators	86
2.8.2	Finite Sample Properties of the Restricted Estimator Vec- tor	89
2.8.3	Example	91
2.9	Three General Test Procedures	92
2.9.1	Likelihood Ratio Test (LR)	92
2.9.2	The Wald Test (W)	93
2.9.3	Lagrange Multiplier Test (LM)	94
2.9.4	Relationships and Properties of the Three General Test- ing Procedures	95
2.9.5	The Three General Testing Procedures in the MLRM Context	97
2.9.6	Example	102
2.10	Dummy Variables	102

2.10.1	Models with Changes in the Intercept	103
2.10.2	Models with Changes in some Slope Parameters	107
2.10.3	Models with Changes in all the Coefficients	109
2.10.4	Example	111
2.11	Forecasting	112
2.11.1	Point Prediction	113
2.11.2	Interval Prediction	115
2.11.3	Measures of the Accuracy of Forecast	117
2.11.4	Example	118
	Bibliography	118
3	Dimension Reduction and Its Applications	121
	<i>Pavel Čížek and Yingcun Xia</i>	
3.1	Introduction	121
3.1.1	Real Data Sets	121
3.1.2	Theoretical Consideration	124
3.2	Average Outer Product of Gradients and its Estimation	128
3.2.1	The Simple Case	128
3.2.2	The Varying-coefficient Model	130
3.3	A Unified Estimation Method	130
3.3.1	The Simple Case	131
3.3.2	The Varying-coefficient Model	140
3.4	Number of E.D.R. Directions	142
3.5	The Algorithm	145
3.6	Simulation Results	147
3.7	Applications	151
3.8	Conclusions and Further Discussion	157

3.9	Appendix. Assumptions and Remarks	158
	Bibliography	159
4	Univariate Time Series Modelling	163
	<i>Paz Moral and Pilar González</i>	
4.1	Introduction	164
4.2	Linear Stationary Models for Time Series	166
4.2.1	White Noise Process	170
4.2.2	Moving Average Model	171
4.2.3	Autoregressive Model	174
4.2.4	Autoregressive Moving Average Model	178
4.3	Nonstationary Models for Time Series	180
4.3.1	Nonstationary in the Variance	180
4.3.2	Nonstationarity in the Mean	181
4.3.3	Testing for Unit Roots and Stationarity	187
4.4	Forecasting with ARIMA Models	192
4.4.1	The Optimal Forecast	192
4.4.2	Computation of Forecasts	193
4.4.3	Eventual Forecast Functions	194
4.5	ARIMA Model Building	197
4.5.1	Inference for the Moments of Stationary Processes	198
4.5.2	Identification of ARIMA Models	199
4.5.3	Parameter Estimation	203
4.5.4	Diagnostic Checking	207
4.5.5	Model Selection Criteria	210
4.5.6	Example: European Union G.D.P.	212
4.6	Regression Models for Time Series	216

4.6.1	Cointegration	218
4.6.2	Error Correction Models	221
	Bibliography	222
5	Multiplicative SARIMA models	225
	<i>Rong Chen, Rainer Schulz and Sabine Stephan</i>	
5.1	Introduction	225
5.2	Modeling Seasonal Time Series	227
5.2.1	Seasonal ARIMA Models	227
5.2.2	Multiplicative SARIMA Models	231
5.2.3	The Expanded Model	233
5.3	Identification of Multiplicative SARIMA Models	234
5.4	Estimation of Multiplicative SARIMA Models	239
5.4.1	Maximum Likelihood Estimation	241
5.4.2	Setting the Multiplicative SARIMA Model	243
5.4.3	Setting the Expanded Model	246
5.4.4	The Conditional Sum of Squares	247
5.4.5	The Extended ACF	249
5.4.6	The Exact Likelihood	250
	Bibliography	253
6	AutoRegressive Conditional Heteroscedastic Models	255
	<i>Pilar Olave and José T. Alcalá</i>	
6.1	Introduction	255
6.2	ARCH(1) Model	260
6.2.1	Conditional and Unconditional Moments of the ARCH(1)	260
6.2.2	Estimation for ARCH(1) Process	263

6.3	ARCH(q) Model	267
6.4	Testing Heteroscedasticity and ARCH(1) Disturbances	269
6.4.1	The Breusch-Pagan Test	270
6.4.2	ARCH(1) Disturbance Test	271
6.5	ARCH(1) Regression Model	273
6.6	GARCH(p,q) Model	276
6.6.1	GARCH(1,1) Model	277
6.7	Extensions of ARCH Models	279
6.8	Two Examples of Spanish Financial Markets	281
6.8.1	Ibex35 Data	281
6.8.2	Exchange Rate US Dollar/Spanish Peseta Data (Continued)	284
	Bibliography	285
7	Numerical Optimization Methods in Econometrics	287
	<i>Lenka Čížková</i>	
7.1	Introduction	287
7.2	Solving a Nonlinear Equation	287
7.2.1	Termination of Iterative Methods	288
7.2.2	Newton-Raphson Method	288
7.3	Solving a System of Nonlinear Equations	290
7.3.1	Newton-Raphson Method for Systems	290
7.3.2	Example	291
7.3.3	Modified Newton-Raphson Method for Systems	293
7.3.4	Example	294
7.4	Minimization of a Function: One-dimensional Case	296
7.4.1	Minimum Bracketing	296

7.4.2	Example	296
7.4.3	Parabolic Interpolation	297
7.4.4	Example	299
7.4.5	Golden Section Search	300
7.4.6	Example	301
7.4.7	Brent's Method	302
7.4.8	Example	303
7.4.9	Brent's Method Using First Derivative of a Function . .	305
7.4.10	Example	305
7.5	Minimization of a Function: Multidimensional Case	307
7.5.1	Nelder and Mead's Downhill Simplex Method (Amoeba)	307
7.5.2	Example	307
7.5.3	Conjugate Gradient Methods	308
7.5.4	Examples	309
7.5.5	Quasi-Newton Methods	312
7.5.6	Examples	313
7.5.7	Line Minimization	316
7.5.8	Examples	317
7.6	Auxiliary Routines for Numerical Optimization	320
7.6.1	Gradient	320
7.6.2	Examples	321
7.6.3	Jacobian	323
7.6.4	Examples	323
7.6.5	Hessian	324
7.6.6	Example	325
7.6.7	Restriction of a Function to a Line	326
7.6.8	Example	326

7.6.9 Derivative of a Restricted Function	327
7.6.10 Example	327
Bibliography	328
Index	329
