<b>1. What is Nonlinearity?</b>	<b>1</b>
1.1 Dynamical Systems: Linear and Nonlinear Forces	2
1.2 Mathematical Implications of Nonlinearity	5
1.2.1 Linear and Nonlinear Systems	5
1.2.2 Linear Superposition Principle	7
1.3 Working Definition of Nonlinearity	10
1.4 Effects of Nonlinearity	11
<b>2. Linear and Nonlinear Oscillators</b>	<b>17</b>
2.1 Linear Oscillators and Predictability	17
2.1.1 Free Oscillations	18
2.1.2 Damped Oscillations	19
2.1.3 Damped and Forced Oscillations	20
2.2 Damped and Driven Nonlinear Oscillators	21
2.2.1 Free Oscillations	22
2.2.2 Damped Oscillations	23
2.2.3 Forced Oscillations – Primary Resonance and Jump Phenomenon (Hysteresis)	23
2.2.4 Secondary Resonances (Subharmonic and Superharmonic)	26
2.3 Nonlinear Oscillations and Bifurcations	27
Problems	29
<b>3. Qualitative Features</b>	<b>31</b>
3.1 Autonomous and Nonautonomous Systems	32
3.2 Dynamical Systems as Coupled First-Order Differential Equations: Equilibrium Points	34
3.3 Phase Space/Phase Plane and Phase Trajectories: Stability, Attractors and Repellers	36
3.4 Classification of Equilibrium Points: Two-Dimensional Case	38
3.4.1 General Criteria for Stability	38
3.4.2 Classification of Equilibrium (Singular) Points	40
3.5 Limit Cycle Motion – Periodic Attractor	50
3.5.1 Poincaré–Bendixson Theorem	52

3.6	Higher Dimensional Systems . . . . .	54
3.6.1	Example: Lorenz Equations . . . . .	55
3.7	More Complicated Attractors . . . . .	58
3.7.1	Torus . . . . .	59
3.7.2	Quasiperiodic Attractor . . . . .	62
3.7.3	Poincaré Map . . . . .	63
3.7.4	Chaotic Attractor . . . . .	64
3.8	Dissipative and Conservative Systems . . . . .	65
3.8.1	Hamiltonian Systems . . . . .	68
3.9	Conclusions . . . . .	69
	Problems . . . . .	69
<b>4.</b>	<b>Bifurcations and Onset of Chaos</b>	
	<b>in Dissipative Systems . . . . .</b>	<b>75</b>
4.1	Some Simple Bifurcations . . . . .	76
4.1.1	Saddle-Node Bifurcation . . . . .	77
4.1.2	The Pitchfork Bifurcation . . . . .	80
4.1.3	Transcritical Bifurcation . . . . .	83
4.1.4	Hopf Bifurcation . . . . .	85
4.2	Discrete Dynamical Systems . . . . .	89
4.2.1	The Logistic Map . . . . .	90
4.2.2	Equilibrium Points and Their Stability . . . . .	91
4.2.3	Stability When the First Derivative Equals to $+1$ or $-1$ . . . . .	92
4.2.4	Periodic Solutions or Cycles . . . . .	94
4.2.5	Period Doubling Phenomenon . . . . .	96
4.2.6	Onset of Chaos: Sensitive Dependence on Initial Conditions – Lyapunov Exponent . . . . .	98
4.2.7	Bifurcation Diagram . . . . .	101
4.2.8	Bifurcation Structure in the Interval $3.57 \leq a \leq 4$ . . .	103
4.2.9	Exact Solution at $a = 4$ . . . . .	104
4.2.10	Logistic Map: A Geometric Construction of the Dynamics – Cobweb Diagrams . . . . .	105
4.3	Strange Attractor in the Hénon Map . . . . .	107
4.3.1	The Period Doubling Phenomenon . . . . .	108
4.3.2	Self-Similar Structure . . . . .	110
4.4	Other Routes to Chaos . . . . .	111
4.4.1	Quasiperiodic Route to Chaos . . . . .	111
4.4.2	Intermittency Route to Chaos . . . . .	113
4.4.3	Type-I Intermittency . . . . .	114
4.4.4	Standard Bifurcations in Maps . . . . .	116
	Problems . . . . .	118

<b>5. Chaos in Dissipative Nonlinear Oscillators and Criteria for Chaos</b>	123
5.1 Bifurcation Scenario in Duffing Oscillator	124
5.1.1 Period Doubling Route to Chaos	126
5.1.2 Intermittency Transition	130
5.1.3 Quasiperiodic Route to Chaos	132
5.1.4 Strange Nonchaotic Attractors (SNAs)	133
5.2 Lorenz Equations	135
5.2.1 Period Doubling Bifurcations and Chaos	136
5.3 Some Other Ubiquitous Chaotic Oscillators	142
5.3.1 Driven van der Pol Oscillator	142
5.3.2 Damped, Driven Pendulum	142
5.3.3 Morse Oscillator	145
5.3.4 Rössler Equations	146
5.4 Necessary Conditions for Occurrence of Chaos	147
5.4.1 Continuous Time Dynamical Systems (Differential Equations)	147
5.4.2 Discrete Time Systems (Maps)	148
5.5 Computational Chaos, Shadowing and All That	151
5.6 Conclusions	153
Problems	153
<b>6. Chaos in Nonlinear Electronic Circuits</b>	159
6.1 Linear and Nonlinear Circuit Elements	159
6.2 Linear Circuits: The Resonant RLC Circuit	161
6.3 Nonlinear Circuits	165
6.3.1 Chua's Diode: Autonomous Case	165
6.3.2 A Simple Practical Implementation of Chua's Diode	167
6.3.3 Bifurcations and Chaos	167
6.4 Chaotic Dynamics of the Simplest Dissipative Nonautonomous Circuit: Murali–Lakshmanan–Chua (MLC) Circuit	171
6.4.1 Experimental Realization	171
6.4.2 Stability Analysis	172
6.4.3 Explicit Analytical Solutions	173
6.4.4 Experimental and Numerical Studies	174
6.5 Analog Circuit Simulations	178
6.6 Some Other Useful Nonlinear Circuits	181
6.6.1 RL Diode Circuit	181
6.6.2 Hunt's Nonlinear Oscillator	182
6.6.3 p-n Junction Diode Oscillator	182
6.6.4 Modified Chua Circuit	182
6.6.5 Colpitt's Oscillator	184
6.7 Nonlinear Circuits as Dynamical Systems	185
Problems	185

<b>7. Chaos in Conservative Systems</b>	191
7.1 Poincaré Cross Section or Surface of Section	192
7.2 Possible Orbits in Conservative Systems	196
7.2.1 Regular Trajectories	197
7.2.2 Irregular Trajectories	201
7.2.3 Canonical Perturbation Theory: Overlapping Resonances and Chaos	202
7.3 Hénon–Heiles System	204
7.3.1 Equilibrium Points	206
7.3.2 Poincaré Surface of Section of the System	207
7.3.3 Numerical Results	208
7.4 Periodically Driven Undamped Duffing Oscillator	213
7.5 The Standard Map	216
7.5.1 Linear Stability and Invariant Curves	217
7.5.2 Numerical Analysis: Regular and Chaotic Motions	222
7.6 Kolmogorov–Arnold–Moser Theorem	226
7.7 Conclusions	227
Problems	228
<b>8. Characterization of Regular and Chaotic Motions</b>	235
8.1 Lyapunov Exponents	235
8.2 Numerical Computation of Lyapunov Exponents	238
8.2.1 One-Dimensional Map	238
8.2.2 Computation of Lyapunov Exponents for Continuous Time Dynamical Systems	239
8.3 Power Spectrum	245
8.3.1 The Power Spectrum and Dynamical Motion	245
8.4 Autocorrelation	250
8.5 Dimension	253
8.6 Criteria for Chaotic Motion	255
Problems	258
<b>9. Further Developments in Chaotic Dynamics</b>	259
9.1 Time Series Analysis	260
9.1.1 Estimation of Time-Delay and Embedding Dimension	260
9.1.2 Largest Lyapunov Exponent	261
Problems	261
9.2 Stochastic Resonance	262
Problems	264
9.3 Chaotic Scattering	266
Problems	268
9.4 Controlling of Chaos	269
9.4.1 Controlling and Controlling Algorithms	270

9.4.2	Stabilization of UPO.....	271
Problems	.....	274
9.5	Synchronization of Chaos.....	277
9.5.1	Chaos in the DVP Oscillator .....	277
9.5.2	Synchronization of Chaos in the DVP Oscillator ....	278
9.5.3	Chaotic Signal Masking and Transmission of Analog Signals .....	280
9.5.4	Chaotic Digital Signal Transmission .....	282
Problems	.....	284
9.6	Quantum Chaos.....	284
9.6.1	Quantum Signatures of Chaos .....	284
9.6.2	Rydberg Atoms and Quantum Chaos .....	287
9.6.3	Hydrogen Atom in a Generalized van der Waals Interaction .....	289
9.6.4	Outlook .....	291
Problems	.....	293
9.7	Conclusions.....	293
<b>10.</b>	<b>Finite Dimensional Integrable</b>	
	<b>Nonlinear Dynamical Systems</b> .....	295
10.1	What is Integrability?.....	296
10.2	The Notion of Integrability .....	297
10.3	Complete Integrability – Complex Analytic Integrability .....	300
10.3.1	Real Time and Complex Time Behaviours .....	301
10.3.2	Partial Integrability and Constrained Integrability ...	302
10.3.3	Integrability and Separability .....	302
10.4	How to Detect Integrability: Painlevé Analysis .....	305
10.4.1	Classification of Singular Points .....	306
10.4.2	Historical Development of the Painlevé Approach and Integrability of Ordinary Differential Equations .	307
10.4.3	Painlevé Method of Singular Point Analysis for Ordinary Differential Equations .....	311
10.5	Painlevé Analysis and Integrability of Two-Coupled Nonlinear Oscillators .....	317
10.5.1	Quartic Anharmonic Oscillators .....	317
10.6	Symmetries and Integrability .....	321
10.6.1	Invariance Conditions, Determination of Infinitesimals and First Integrals of Motion .....	323
10.6.2	Application – The Hénon–Heiles System.....	326
10.7	A Direct Method of Finding Integrals of Motion .....	330
10.8	Integrable Systems with Degrees of Freedom Greater Than Two .....	331
10.9	Integrable Discrete Systems.....	333

10.10	Integrable Dynamical Systems on Discrete Lattices .....	335
10.11	Conclusion .....	336
	Problems .....	337
<b>11.</b>	<b>Linear and Nonlinear Dispersive Waves .....</b>	<b>341</b>
