Introduction	1
---------------------------	---

Part I. Bayesian Image Analysis: Introduction

1. The Bayesian Paradigm	9
1.1 Warming up for Absolute Beginners	10
1.2 Images and Observations	14
1.3 Prior and Posterior Distributions	20
1.4 Bayes Estimators	24
2. Cleaning Dirty Pictures	29
2.1 Boundaries and Their Information Content	30
2.2 Towards Piecewise Smoothing	31
2.3 Filters, Smoothers, and Bayes Estimators	41
2.4 Boundary Extraction	48
2.5 Dependence on Hyperparameters	50
3. Finite Random Fields	55
3.1 Markov Random Fields	55
3.2 Gibbs Fields and Potentials	60
3.3 Potentials Continued	66

Part II. The Gibbs Sampler and Simulated Annealing

4. Markov Chains: Limit Theorems	75
4.1 Preliminaries	75
4.2 The Contraction Coefficient	81
4.3 Homogeneous Markov Chains	84
4.4 Exact Sampling	92
4.5 Inhomogeneous Markov Chains	102
4.6 A Law of Large Numbers for Inhomogeneous Chains	106
4.7 A Counterexample for the Law of Large Numbers	110

5. Gibbsian Sampling and Annealing	113
5.1 Sampling	113
5.2 Simulated Annealing	120
5.3 Discussion	125
6. Cooling Schedules	129
6.1 The ICM Algorithm	129
6.2 Exact MAP Estimation Versus Fast Cooling	131
6.3 Finite Time Annealing	139

Part III. Variations of the Gibbs Sampler

7. Gibbsian Sampling and Annealing Revisited	143
7.1 A General Gibbs Sampler	143
7.2 Sampling and Annealing Under Constraints	147
8. Partially Parallel Algorithms	153
8.1 Synchronous Updating on Independent Sets	154
8.2 The Swendsen-Wang Algorithm	156
9. Synchronous Algorithms	159
9.1 Invariant Distributions and Convergence	159
9.2 Support of the Limit Distribution	163
9.3 Synchronous Algorithms and Reversibility	168

Part IV. Metropolis Algorithms and Spectral Methods

10. Metropolis Algorithms	179
10.1 Metropolis Sampling and Annealing	179
10.2 Convergence Theorems	180
10.3 Best Constants	185
10.4 About Visiting Schemes	187
10.5 Generalizations and Modifications	191
10.6 The Metropolis Algorithm in Combinatorial Optimization ...	193
11. The Spectral Gap and Convergence of Markov Chains	197
11.1 Eigenvalues of Markov Kernels	197
11.2 Geometric Convergence Rates	201
12. Eigenvalues, Sampling, Variance Reduction	203
12.1 Samplers and Their Eigenvalues	203
12.2 Variance Reduction	204
12.3 Importance Sampling	206

13. Continuous Time Processes	209
13.1 Discrete State Space	210
13.2 Continuous State Space	211

Part V. Texture Analysis

14. Partitioning	217
14.1 How to Tell Textures Apart	217
14.2 Bayesian Texture Segmentation	221
14.3 Segmentation by a Boundary Model	223
14.4 Julesz's Conjecture and Two Point Processes	225
15. Random Fields and Texture Models	231
15.1 Neighbourhood Relations	233
15.2 Random Field Texture Models	235
15.3 Texture Synthesis	240
16. Bayesian Texture Classification	243
16.1 Contextual Classification	244
16.2 Marginal Posterior Modes Methods	246

Part VI. Parameter Estimation

17. Maximum Likelihood Estimation	251
17.1 The Likelihood Function	252
17.2 Objective Functions	257
18. Consistency of Spatial ML Estimators	263
18.1 Observation Windows and Specifications	263
18.2 Pseudolikelihood Methods	268
18.3 Large Deviations and Full Maximum Likelihood	277
18.4 Partially Observed Data	279
19. Computation of Full ML Estimators	281
19.1 A Naive Algorithm	281
19.2 Stochastic Optimization for the Full Likelihood	285
19.3 Main Results	286
19.4 Error Decomposition	291
19.5 L^2 -Estimates	295

Part VII. Supplement

20. A Glance at Neural Networks	301
20.1 Boltzmann Machines	302
20.2 A Learning Rule	306
21. Three Applications	313
21.1 Motion Analysis	313
21.2 Tomographic Image Reconstruction	317
21.3 Biological Shape	321

Part VIII. Appendix

A. Simulation of Random Variables	327
A.1 Pseudorandom Numbers	327
A.2 Discrete Random Variables	331
A.3 Special Distributions	334
B. Analytical Tools	343
B.1 Concave Functions	343
B.2 Convergence of Descent Algorithms	346
B.3 A Discrete Gronwall Lemma	347
B.4 A Gradient System	347
C. Physical Imaging Systems	351
D. The Software Package AntsInFields	355
References	357
Symbols	379
Index	381
