

Table of Contents

Polymerization

1 Mathematical Models for Polymerization Processes of Ziegler-Natta Type

1.1	Introduction	3
1.2	Description of the Process	5
1.3	Governing Equations for the Macroscopic Processes (Heat and Mass Transfer)	7
1.4	Governing Equation for the Microproblem (Polymerization)	9
1.5	Computation of the Coupling Terms. Expansion of the Agglomerate	12
1.6	Rescaling and Simplifications	14
1.7	Summary of the Simplified Model and Sketch of the Proof	18
1.8	Fragmentation	21
1.9	Conclusions and Open Questions	25
1.10	Acknowledgements	27
	References	27

Nucleation

2 Classical Kinetic Theory of Nucleation and Coarsening

2.1	Introduction	31
2.2	Kinetics of Clusters	32
2.3	Phase Equilibria of a Binary Material	36
2.4	Macroscopic Kinetics	39
2.5	Quasistatic Nuclei	44
2.6	Material and Energy Parameters of Kinetic Theory Determined from Xiao-Haasen Data	51
2.7	Discussion	55
2.8	Acknowledgements	56
2.9	Appendix: BD Kinetics for $n < n_c$	56
	References	57

3 Multidimensional Theory of Crystal Nucleation

3.1	Introduction	59
3.2	One-dimensional Theory of Nucleation	60
3.3	Modifications of the Classical Theory	63
3.4	Multidimensional Theory of Nucleation	74
3.5	Some Applications	83
3.6	Closing Remarks	115
	References	115

4 Kinetic Theory of Nucleation in Polymers

4.1	Introduction	119
4.2	Nucleation Theory	123
4.3	Kinetic Equations from Non-Equilibrium Thermodynamics	129
4.4	Isothermal Homogeneous Nucleation	130
4.5	Nucleation in Spatially Inhomogeneous Non-Isothermal Conditions	136
4.6	Homogeneous Nucleation in Spatially Inhomogeneous Systems. Diffusion Regime	141
4.7	Nucleation in a Shear Flow	146
4.8	Kinetic Equations for the Crystallinity	152
4.9	Further Extensions	157
4.10	Discussion and Conclusions	161
4.11	Acknowledgments	162
	References	162

Crystallization

5 Mathematical Models for Polymer Crystallization Processes

5.1	Stochastic Models of the Crystallization Process	167
5.2	The Causal Cone	180
5.3	The Hazard Function	185
5.4	The Random Tessellation of Space	187
5.5	Estimating the Local Density of Interfaces	189
5.6	Interaction with Latent Heat	202
5.7	Simulation of the Stochastic Model	205
5.8	Stochasticity of the Causal Cone	213
5.9	A Hybrid Model	216
5.10	Scaling Limits	226
5.11	Related Mathematical Problems	231
	References	240

6 Polymer Crystallization Processes via Many Particle Systems

6.1	Introduction	243
6.2	The Nucleation Process	244
6.3	Growth of Crystals	246
6.4	The Mass Distribution of Crystals	247
6.5	The Rates	247
6.6	The Time Evolution of the Processes Λ_N and \mathbb{Y}_N	250
6.7	Heuristic Derivation of a Continuum Dynamics	254
	References	259

Manufacturing

7 Modelling of Industrial Processes for Polymer Melts: Extrusion and Injection Moulding

7.1	Introduction	263
7.2	Flow Instabilities in the Extrusion of Polymer Melts	265
7.3	Injection Moulding	295
7.4	Closing Remarks	307
	References	308

Appendix. Color Plates	311
