

Contents

1	Environmental Signal Processing and Adaptation	1
	G. Heldmaier and D. Werner	
1.1	Introduction	1
1.2	Acclimation and Adaptation	2
1.3	Biological and Physical Signals for Plants	2
1.4	Symbiotic Signal Exchange	3
1.5	Light Adaptation in Plants	4
1.6	Thioredoxins	5
1.7	Vibratory Signal Processing in Insects	5
1.8	Seasonal Acclimation in Small Mammals	6
1.9	Signal Processing	7
1.10	References	7
2	Communication and Efficiency in the Symbiotic Signal Exchange	9
	D. Werner and P. Müller	
2.1	Introduction	9
2.2	Flavonoids and Isoflavonoids as Signal Molecules from Host Plants	10
2.3	Nod Factors as Signal Molecules from <i>Rhizobium</i> , <i>Bradyrhizobium</i> , <i>Sinorhizobium</i> and <i>Mesorhizobium</i>	19
2.4	Communication and Signal Exchange Between Host Plants and Symbionts: a Summary	21
2.5	Induction of Early <i>nod</i> Genes in the Plants by Inoculation with Rhizobia/Bradyrhizobia	24
2.6	Symbiosis Specific Differentiation of Free-Living <i>Rhizobium/Bradyrhizobium</i> Cells to Bacteroids	25
2.7	Nodule Compartmentation and Induction of Late Nodulines During Nodule Development	27
2.8	Essential Functions of Late Nodulins for Nodule Metabolism	28

2.9	Signal Molecules for the Induction of Late Nodulins	28
2.10	Signals and the Regulation of Nodule Senescence	30
2.11	N ₂ -Fixation and Denitrification Under Field Conditions	30
2.12	References	31
3	Rhizosphere Signals and Ecochemistry	39
	Donald A. Phillips and Wolfgang R. Streit	
3.1	Introduction	39
3.2	The Nature of Rhizosphere Signals	40
3.2.1	Plant Signal Molecules	40
3.2.2	Bacterial Signals to Plants	41
3.2.3	Antibiotics	42
3.3	New Concepts in Rhizosphere Signals	43
3.3.1	Biotin	44
3.3.2	Respiratory Elicitors	47
3.3.3	Nucleosides	47
3.4	Integration of Signals into Rhizosphere Communities	49
3.4.1	Positional Effects	49
3.4.2	Environmental Effects	50
3.4.3	Inactivation of Signals	50
3.5	Summary	51
3.6	References	51
4	Endomycorrhizas in the Gentianales: Structures and Evolution of the Vesicular-Arbuscular Mycorrhiza (VAM)	57
	Hans Christian Weber	
4.1	Introduction	57
4.2	Classification of the Gentianales	59
4.3	Root System, Roots, and Mycorrhizal Structures in the Gentianales	59
4.3.1	Root Infection by VAM Fungi	60
4.3.2	Colonization of the Root Cortex	61
4.4	<i>Paris</i> Type: Structural Incompatibility of the <i>Arum</i> Type . . .	65
4.5	VAM Structures as a Characteristic for Systematics	66
4.6	The Advanced <i>Paris</i> Type Represents a Progressive Evolutionary Step in VAM	66
4.7	Summary	67
4.8	References	68

5	Light Adaptation of the Photosynthetic Apparatus of Green Algae	71
	Horst Senger, Klaus Humbeck, and Hilmar Schiller	
5.1	Introduction	71
5.2	Changes in the Photosynthetic Apparatus During Adaptation to Different Light Intensities and Wavelengths . .	72
5.3	Adaptation Phenomena of Other Green Algae and of Aquatic Higher Plants	77
5.4	Carotenoids and Photosynthetic Adaptation	77
5.5	Regulation of the <i>cab</i> -Gene Expression by Light of Different Intensities and Wavelengths	78
5.6	Photoreceptors	79
5.7	Photoprotection by Nonphotochemical Chlorophyll Fluorescence Quenching	81
5.8	Adaptation of the Photosynthetic Apparatus of Cyanobacteria to Light Intensity and CO ₂ Concentration .	82
5.9	References	83
6	Light-Harvesting Systems in the Photosynthetic Apparatus of Cyanobacteria, Red Algae and Cryptophytes	87
	W. Wehrmeyer	
6.1	Introduction	87
6.2	Light Harvesting in the Photosynthetic Apparatus of Cyanobacteria and Red Algae	88
6.2.1	Structure of Hemidiskoidal and Hemiellipsoidal Phycobilisomes	88
6.2.2	Chromophores and Excitation Energy Transfer	93
6.2.3	Phycobilisomes as Dynamic Structures	95
6.3	Light Harvesting in the Chloroplasts of Cryptophytes	97
6.3.1	Origin of Genetic Complexity in Cryptophytes	97
6.3.2	Phycobiliprotein Antennae in Cryptophytes	98
6.3.3	Cooperation of Two Antennae Systems in Cryptophytes . . .	101
6.4	References	103

7	Thioredoxins: Adapting Plant Metabolism to Light and Other Environmental Signals	113
	H. Follmann and I. Häberlein	
7.1	Introduction	113
7.2	Complete thioredoxin profiles in plant cells	116
7.3	Thioredoxin-Dependent Enzymes	121
7.4	The Signaling Mechanism and its Physiological Logic	123
7.5	Environmental Disturbance of Thioredoxin Action	128
7.6	Experimentation Pitfalls in Vitro	130
7.7	Thioredoxin Control of Plant Metabolism: A Unified View	131
7.8	References	134
 8	 Photoinhibition in Seaweeds	 141
	D. Hanelt and W. Nultsch	
8.1	Introduction	141
8.2	Photoinhibition of Photosynthesis and Its Recovery	143
8.3	Occurrence of Photoinhibition in the Natural Environment	147
8.4	Photoinhibition Affects Zonation of the Algae on the Shore	149
8.5	Temperature Dependence of Photoinhibition and Recovery	151
8.6	Correlation Between Oxygen Production Rate and Fluorescence	153
8.7	Possible Molecular Mechanisms of Photoinhibition and Recovery in Seaweeds	156
8.8	The Influence of UV Radiation on Photosynthesis of Arctic Macroalgae	159
8.9	Conclusion	162
8.10	References	163
 9	 The Auditory-Vibratory Sensory System in Bushcrickets (Tettigoniidae, Ensifera, Orthoptera) I Comparison of Morphology, Development and Physiology	 169
	Klaus Kalrmring, Thomas Sickmann, Martin Jatho, Wolfgang Rössler, Elke Hoffmann, Clemens Unrast, Marc Bangert, and Bernd Nebeling	
9.1	Introduction	169
9.2	The Receptor Organs	172
9.2.1	Location and Morphology	172
9.2.2	Larval and Phylogenetic Development	179

9.2.3	Stimulus Transduction in the Receptor Organs	191
9.2.4	Frequency Tuning of the Receptor Cells	196
9.3	Projection of the Receptor Cells at the Ventral Nerve Cord Level	199
9.4	The Auditory-Vibratory Sensory System in the Ventral Nerve Cord	201
9.5	References	204

10 The Auditory-Vibratory Sensory System in Bushcrickets (Tettigoniidae, Ensifera, Orthoptera)

II. Signal Production and Acoustic Behavior	209
Klaus Kalmring, Martin Jatho, Elke Hoffmann, Oliver Stiedl, Johannes Schul, Holger Schröder, Richard Stephens, and Colin Hartley	

10.1	Introduction	209
10.1.1	Signal Production	209
10.1.2	Signal Transmission in the Biotope	210
10.1.3	Broadcasting and Acoustic Behavior	211
10.2	Results	213
10.2.1	Combined “Resonant” and “Nonresonant” Sound Production in Tettigoniids	213
10.2.2	The Role of Subtegmina Air Volume During Sound Production in Tettigoniids	220
10.2.3	Acoustic Behavior and Species Discrimination in Tettigoniids	221
10.2.4	Chirp Rate Variability	225
10.2.5	Reactions of <i>Tettigonia viridissima</i> Larvae to Sound and Vibration	227
10.3	References	229

11 Mechanisms for Seasonal Control of Reproduction in Small Mammals 233

Stephan Steinlechner and Wolfgang Puchalski

11.1	Why Seasonal Reproduction?	233
11.2	Mechanism of Seasonal Control	235
11.2.1	Circannual Rhythms	235
11.2.2	Sequence of Stages as a Basis for Seasonal Reproduction . .	235
11.2.3	Environmental Signals as Triggers for Seasonal Reproduction	236

11.2.4	Pros and Cons of Different Strategies	236
11.3	Transduction of Daylength Information into an Endogenous Signal	237
11.4	Lack of Photoperiodic Response in "Photoperiodic Species": Nonresponders	243
11.5	References	246
12	Role of Photoperiod During Seasonal Acclimation in Winter-Active Small Mammals	251
	Gerhard Heldmaier and Martin Klingenspor	
12.1	Introduction	251
12.2	Body Mass and Fur Insulation	252
12.3	Burrowing and Nest Building Activity	257
12.4	Daily Torpor	258
12.5	Seasonal Reduction of Energy Requirements	261
12.6	Cold Tolerance	263
12.7	Thermogenic Acclimation	265
12.8	Seasonal Control of Thermogenesis	269
12.9	Neural and Endocrine Processing of Environmental Signals .	270
12.10	References	273
	Subject Index	281

Environmental Signal Processing and Adaptation

Heldmaier, G.; Werner, D. (Eds.)

2003, X, 287 p., Hardcover

ISBN: 978-3-540-43794-9
