Roadmap	XVII
1 Medically Intractable Epilepsy	
J. Milton	1
1.1 Temporal Lobe Epilepsy	1
1.2 Prevalence of MIE	2
1.3 The Evolving Epileptic Syndrome	4
1.4 Lesional Epilepsy	5
1.5 Do Seizures Begat Seizures?	6
1.6 Neuronal Re-organization	7
1.7 Epilepsy as a Learning Disorder	11
1.8 Dynamical Aspects of Epilepsy	13
1.9 Conclusions	14
2 Insights into Seizure Propagation from Axonal Conduction Times	
J. Milton	15
2.1 Axonal Conduction Velocities	16
2.1.1 Unmyelinated Axons (Path 1)	16
2.1.2 Myelinated Axons (Path 2)	17
2.2 Human Seizure Propagation Rates	19
2.3 Sub-cortical Mediated Spread (Path 3)	21
2.4 Discussion	22
3 Dynamic Epileptic Systems Versus Static Epileptic Foci?	
S.A. Chkhenkeli and J. Milton	25
3.1 Failures of Epilepsy Surgery	25
3.2 Dynamic Epileptic Systems	26
3.3 Amygdalo-Hippocampal Interactions	28
3.4 Propagation Pathways	30
3.5 Extratemporal Seizure Propagation	32
3.6 Inhibitory Mechanisms	34
3.7 Conclusion	35

4 Neuroglia, the Other Brain Cells

P. Jung, A.H. Cornell-Bell, A. deGrauw, and R. Strawsburg 37

4.0.1 Voltage-gated Na^+ Channels in Astrocytes
and Action Potentials 38

4.0.2 Calcium Signaling in Glial Cells 39

4.1 Cluster Decomposition and Cluster Entropy of Ca^{2+} Waves 42

4.2 Calcium Signaling in Hyperexcitable Tissues 44

4.2.1 Cultures of Human Nervous Tissue 45

4.3 Neuron-Glial Signaling 47

4.4 Conclusions 49

5 The Electroencephalogram (EEG):**A Measure of Neural Synchrony**

J.S. Ebersole and J. Milton 51

5.1 Cortical Architecture 51

5.1.1 Laminar Organization 51

5.1.2 Columnar Organization 53

5.2 Generation of the EEG 54

5.3 Neuronal Dipole Layers 56

5.4 Role of Glial Cells 57

5.5 Epileptic Spikes 57

5.6 Seizures 60

5.7 Ictal EEG Patterns 62

5.8 Limitations of the EEG 64

5.9 Concluding Remarks 67

**6 Electrocorticographic Coherence Patterns
of Epileptic Seizures**

V.L. Towle, F. Ahmad, M. Kohrman, K. Hecox, and S. Chkhenkeli 69

6.1 Lateral Coherence 69

6.2 ECoG Recordings 71

6.3 Ictal Coherence 71

6.4 Interictal Coherence 76

7 Synchronization**of Synaptically-Coupled Neural Oscillators**

P.C. Bressloff and S. Coombes 83

7.1 Neural Oscillator Models 88

7.1.1 Conductance-based Models 88

7.1.2 Class I and Class II Excitability 90

7.1.3 Phase Resetting Curves 92

7.1.4 Periodic Forcing:
Frequency-locking, Phase-locking and Synchronization 93

7.1.5	Integrate-and-fire Model	96
7.2	Mutual Synchronization in a Network of Synaptically Coupled Oscillators	97
7.2.1	Network Model with Synaptic Coupling	97
7.2.2	Synchronization in the Weak Coupling Regime	99
7.2.3	Synchronization in the Strong Coupling Regime	105
7.3	Synaptically Generated Traveling Waves	110
8 Controlling Neural Synchrony with Periodic and Aperiodic Stimuli		
	J.D. Hunter and J. Milton	115
8.1	Arnold Tongue Diagrams	116
8.1.1	Entrainment Versus Synchrony	117
8.1.2	Synaptic Inputs	118
8.1.3	Epileptic Hippocampal Slices	119
8.2	Aperiodic Current Inputs	121
8.3	Rate-dependent Control of Neural Synchrony	123
8.4	Inhibitory Control of Neural Synchrony	124
8.5	Periodically Stimulated Inhibitory Networks	127
8.6	Discussion	129
9 Modeling Pattern Formation in Excitable Media: The Legacy of Norbert Wiener		
	A.S. Mikhailov	131
9.1	Excitable Media	132
9.2	Spiral Waves Around Obstacles	134
9.3	Free Spiral Waves	136
9.4	Kinematics of Curved Waves with Open Ends	142
9.5	Complex Anisotropy	145
9.6	Resonances	148
9.7	Meandering	154
9.8	Fibrillation and Turbulence	159
9.9	Conclusions	163
10 Are Cardiac Waves Relevant to Epileptic Wave Propagation?		
	A.T. Winfree	165
10.1	Introduction	165
10.2	Different Molecular Mechanisms of Propagation	166
10.3	Electrical Propagation Between Adjacent Cells	168
10.4	Chemical Propagation Between Adjacent Cells	175
10.5	Electrical Propagation in the Long-Range Fast-lane	176
10.6	An Alternative Description of Propagation in Complex Media	178
10.7	Electrical Stimulation of Excitable Tissues	186

11 Pattern Formation in the Microbial World:

Dictyostelium Discoideum

H. Levine	189
11.1 Spiral Waves and Aggregation	189
11.2 Wavefield Evolution	194
11.2.1 Cell Streaming and Mound Formation	199
11.3 Cell Sorting and Tip Formation	206
11.4 Reprise	210

12 Predicting Epileptic Seizures

Robert Savit	213
12.1 Empiricism and Theory	214
12.2 Predicting Seizures	216
12.3 Simple Nonlinear Measures	218
12.4 Role of Non-stationarity and Non-autonomy	223
12.5 Non-autonomy and the Metaphase Space	225
12.6 Nonautonomy in Temporal Lobe Epilepsy	227
12.7 Conclusion	232
12.8 Prospective	233
12.9 Addendum	235

13 Comparison of Methods for Seizure Detection

K.K. Jerger, T.I. Netoff, J.T. Francis, T. Sauer, L. Pecora, S.L. Weinstein, S.J. Schiff	237
13.1 Methods for Seizure Prediction	238
13.1.1 Power Spectrum	238
13.1.2 Cross-correlation	239
13.1.3 Principal Components Analysis	239
13.1.4 Wavelets	240
13.1.5 Phase Correlation	240
13.1.6 Correlation Dimension	241
13.1.7 Mutual Prediction	242
13.2 Comparison of Seizure Detection Methods	242
13.3 Discussion	246

14 Direct Deep Brain Stimulation:

First Steps Towards the Feedback Control of Seizures

S.A. Chkhenkeli	249
14.1 Background	249
14.1.1 Stimulation of the Caudate Nucleus	249
14.1.2 Stimulation of the Dentate Nucleus	253
14.2 Clinical Experience	256
14.3 Feedback Control of Deep Brain Stimulation	257

14.4	Comparisons of Therapeutic Effects of Brain Stimulation	258
14.5	Conclusion	260
15 Seizure Control Using Feedback and Electric Fields		
B.J. Gluckman and S.J. Schiff		263
15.1	Introduction	263
15.2	Electric Field Modulation of Neuronal Activity	264
15.2.1	History and Physics	264
15.2.2	Modulation with DC	265
15.2.3	Computational Confirmation of Modulation	267
15.3	Key Instrumentation and Experimental Methods	269
15.3.1	Measurement Technique	269
15.3.2	Application of an Electric Field	269
15.4	Feedback Control of In-vitro Seizure Activity	271
15.4.1	Feedback Algorithm	271
15.4.2	Field Characteristics	271
15.4.3	Overview of Control Phenomena	272
15.4.4	Seizure Suppression	272
15.4.5	Seizure Enhancement	272
15.5	Comparison of Parameters: a Single Experiment	275
15.5.1	Feedback Suppression	275
15.5.2	Suppression with Constant Field	277
15.5.3	Stimulation with Low-Frequency Noise	277
15.5.4	Positive Feedback Control	278
15.5.5	Release Phenomena	279
15.6	Results Summary	279
15.7	Discussion	281
16 Aborting Seizures with a Single Stimulus: The Case for Multistability		
J. Foss and J. Milton		283
16.1	Delayed Recurrent Loops	285
16.2	Basins of Attraction	289
16.3	Noise-induced Switching	290
16.4	Statistical Periodicity	291
16.5	Conclusion	294
17 Unstable Periodic Orbits (UPOs) and Chaos Control in Neural Systems		
M.L. Spano, W.L. Ditto, K. Dolan, F. Moss		297
17.1	Unstable Periodic Orbits	298
17.2	Locating UPOs	299
17.2.1	Direct Observation of UPOs	299
17.2.2	Topological Recurrence Method	300

XII Contents

17.2.3	Periodic Orbit Transform Method	304
17.2.4	Surrogate Analysis	306
17.3	UPOs: Applications to Biology	311
17.3.1	Canine Ventricular Fibrillation	311
17.3.2	Rat Brain Hippocampus	313
17.4	The Control of Chaos	314
17.4.1	Control of Chaos in Cardiac Tissue	315
17.4.2	Control of Chaos in Brain Tissue	319
17.5	Discussion	321
 18 Prospects for Building a Therapeutic Cortical Stimulator		
J.R. Hetling	323
18.1	Cortical Stimulation as a Treatment Approach	323
18.2	Devices for Therapeutic Stimulation	325
18.3	The Input Stage: Detection of Seizure Onset	328
18.3.1	Recording Bioelectric Signals: FET vs. Metal Electrodes	328
18.3.2	Chemical Signals: Ion-selective Electrodes	331
18.3.3	Alternate Signals: Optical	331
18.4	Processing Stage	332
18.5	Output Stage	333
18.5.1	Electrical Stimulation: Mechanisms	334
18.5.2	Electrical Stimulation: Metal Electrodes	335
18.5.3	Chemical Stimulation: Micropumps	336
18.6	Power Supply: Battery vs. RF	337
18.7	Materials and Packaging	337
18.8	Closing and Speculation	338
 19 Brain Defibrillators:		
Synopsis, Problems and Future Directions		
J. Milton and P. Jung	341
19.1	Brain Defibrillator or Fibrillator?	341
19.2	What to Treat: Seizures or Spikes?	342
19.3	Seizure Prediction	343
19.4	Sudden Changes in Neural Dynamics	344
19.5	The Case for Brief Stimuli	344
19.6	Changing Neural Synchrony	346
19.7	Controlling Waves of Neural Activity	346
19.8	Electrical Versus Chemical Stimuli	347
19.9	Where to Deliver the Stimulus?	348
19.10	Linear Versus Nonlinear Methods	349
19.11	Problems	350
19.11.1	Methodological Woes	350
19.11.2	Measurement Guided Mathematical Models	350
19.11.3	Stage of Patient's Epileptic Syndrome	351

19.11.4 Animal Models	351
19.12 Conclusion	351
Color Plates	353
References	373
Index	411

Epilepsy as a Dynamic Disease

Milton, J.; Jung, P. (Eds.)

2003, XXXII, 417 p., Hardcover

ISBN: 978-3-540-42762-9
