

Table of Contents

Introduction	1
Summary	3
Zusammenfassung	15
Empfehlungen	29
 1 Theoretical and Practical Possibilities in Human Embryo Experimentation	 37
1.1 The Human Problem	38
1.1.1 Infertility	38
1.1.2 Embryo loss	41
1.2 Experiments Designed Exclusively to Develop Methods to Improve, Facilitate or Make Reproduction Possible.	45
1.2.1 In vitro fertilisation: all possible clinical indications	45
1.2.2 Embryo culture	46
1.2.3 Intracytoplasmis sperm injection (ICSI)	48
1.2.4 Injection of ooplasm	49
1.2.5 Embryo and gamete freezing	50
1.2.6 Other techniques	50
(i) Spermatogonial transfer	50
(ii) Ovary transplants	51
(iii) in vitro maturation of germ cells	51
(iv) Sperm sorting	51
1.3 Prenatal and Preimplantation Genetic Diagnosis	52
1.3.1 Major goals	52
1.3.2 Prenatal diagnosis	54
1.3.3 Preimplantation Genetic Diagnosis	54
1.3.4 Procedures involved in IVF and PGD	58
1.3.5 How do we decide when PGD should be used and what are its limits?	59

1.4	Experiments Designed to Develop and Improve Methods of Contraception.....	62
1.5	Research to Obtain Basic Understanding of Early Human Embryogenesis	62
1.6	Experiments Designed to Develop Methods for the Alteration of the Genetic Makeup of the Human Embryo and Resulting Adult (Cure and Improve)	63
1.6.1	Correction of a genetic defect	63
1.6.2	Genetic improvement	65
1.6.3	Cloning	66
1.7	Research Involving the Use of Embryos to Derive Embryonic Stem (ES) Cells for Therapeutic Purposes	68
1.7.1	Will clinical application of ES-cells be necessary in view of the availability of adult stem cells?.....	73
1.8	Conclusions	75
Tables	39
1.1	Causes of male infertility	39
1.2	Causes of female infertility	40
1.3	a) Most common reasons for requesting PGD.....	53
	b) PGD referrals according to indication.....	53
1.4	a) Specific locus diseases for which PGD has been requested ..	55
	b) Chromosomal abnormalities for which PGD has been requested	56
2	Adult and Embryonic Stem Cells: Clinical Perspectives	77
2.1	Introduction	77
2.2	Regenerative Medicine: New Approaches for Tissue Repair	78
2.2.1	Application of factors regulating proliferation, migration, differentiation and structural integration.....	79
2.2.2	Gene therapy	79
2.2.3	Cell transplantation	80
2.2.4	Tissue engineering	80
2.3	Cell Sources	83
2.3.1	Somatic differentiated cells.....	83
2.3.2	Adult stem and progenitor cells	85
2.3.3	Hematopoietic stem and precursor cells	85
2.3.4	Mesenchymal stem cells	88
2.3.5	Cord blood stem cells	90
2.3.6	Tissue-resident adult stem and progenitor cells	91
2.3.7	Intestinal stem cells.....	91

2.3.8	Epidermal stem cells	92
2.3.9	Neuronal stem cells	92
2.3.10	Oval cells of the liver	94
2.3.11	Pancreatic stem cells	94
2.3.12	Transdifferentiation	94
2.3.13	Previous clinical application of adult stem cells	95
2.4	Fetal Cells	96
2.5	Embryonic Stem Cells	96
2.5.1	Isolation and culture of embryonic stem cells	98
2.5.2	Differentiation of embryonic stem cells	99
2.5.3	Genetic manipulation of human embryonic stem cells	100
2.5.4	Approaches to allow clinical transplantation of ES-cell-derived cells without immunosuppression	101
2.5.5	World wide embryonic cell culture collection	101
2.5.6	Genetic engineering of an universal ES-cell line	102
2.5.7	Tolerance induction	102
2.5.8	Production of autologous embryonic stem cells by means of ‘therapeutic cloning’	104
2.6	Embryonic Germ Cells	107
2.7	Potential Risks of Upcoming Applications of Regenerative Medicine	108
2.8	Clinical Approval	109
2.9	Time Frame for Future Clinical Applications	109
3	The Regulation of Embryo Research in Europe: Situation and Prospects	111
3.1	Introduction	111
3.2	Current Regulation in the EU and the NAS	112
3.2.1	The European Union	112
3.2.1.1	Regulatory stances	112
3.2.1.2	Definition of “embryo”	113
3.2.1.3	Sources of embryos for research (where permitted)	114
3.2.1.4	Time limit on use for research (where permitted)	114
3.2.1.5	Consent	115
3.2.1.6	Licences	115
3.2.1.7	Ethics Committee approval	115
3.2.1.8	Benefit to the embryo	116
3.2.1.9	Other purposes	116
3.2.1.10	Storage	117

3.2.2	The Newly Associated States	117
3.2.2.1	Regulatory stances	117
3.2.2.2	Sources of embryos (where permitted)	118
3.2.2.3	Time limit for research (where permitted)	118
3.2.2.4	Consent	119
3.2.2.5	Licenses	119
3.2.2.6	Ethics Committee approval	119
3.2.2.7	Benefit to the embryo	119
3.2.2.8	Other purposes	119
3.2.2.9	Storage	120
3.3	Case Study 1: Regulation in the United Kingdom	120
3.3.1	Challenges to the legislation	121
3.3.2	The broad position of UK regulation	123
3.4	Case Study 2: Regulation in Spain	127
3.4.1	Main regulations on embryo research	127
3.4.2	The ruling of the Spanish Constitutional Court of 19 December 1996	129
3.4.3	The Spanish Constitutional Court ruling of 17. June 1999.	130
3.4.4	The National Assisted Human Reproduction Committee Comisión Nacional de Reproducción Humana Asistida – NRHA)	131
3.4.4.1	The first report of the CNRHA	132
3.4.4.2	The second report of CNRHA	133
3.4.5	Practical aspects and problems	133
3.5	Case Study 3: Regulation in Germany	134
3.5.1	Protection of Embryos Act and Stem Cell Act	134
3.5.2	Relevant legislation	135
3.5.3	Current decisions	137
3.5.3.1	Statutory definition of the embryo and prohibition of cloning	138
3.5.3.2	Criticism of the statutory definition of the embryo and of the prohibition of cloning	138
3.5.3.3	The discussion on the status of the embryo	141
3.5.4	Embryo research	141
3.5.4.1	Admissibility of embryo research	141
3.5.4.2	Extraction of embryos	142
3.5.4.3	Admission of the importation of embryonic stem cells	142
3.5.4.4	Preimplantation Genetic Diagnosis (PGD)	145
3.5.5	Current discussion – statements from the main political parties	146
3.5.6	Commission of Inquiry and National Ethics Council – an attempt at a solution	148
3.5.7	Possible solutions for the German legal situation	149

3.6	Prospects.	151
3.6.1	The European Union.	153
3.6.2	The Impact of the Newly Associated States	153
3.7	Conclusion	153
3.8	Recent Development	154
4	Attitudes toward Embryo Experimentation in Europe	157
4.1	Perceptions of Scientific Advances and Public Policies.	157
4.2	Science in a Crisis of Legitimacy?	159
4.2.1	Perceptions of science in late modernity: Environmental awareness, “zero risk” culture and the “postmodern condition”	159
4.2.2	The cultural appropriation of science at the turn of the century	160
4.3	Ambivalence toward Science at the Turn of the Century: The Case of Life Sciences	162
4.4	General Attitudes to Science and Technology in Europe	165
4.4.1	Interest in science	165
4.4.2	Expectations about sciences and technology	165
4.4.3	Confidence in the scientific community.	166
4.5	Perceptions of Animal and Human Cloning in Europe	168
4.6	Attitudes to Reproduction Technologies: IVF and Semen Bank Donors	172
4.7	Stem Cells, Embryo Experimentation and the Status of the Embryo	175
4.7.1	Awareness and information about stem cells	175
4.7.2	The status of the embryo.	176
4.7.3	Beliefs about the beginning of individual human life.	180
4.7.4	Religious beliefs, the status of the embryo and the beginning of individual life	183
4.8	Attitudes toward Embryo Experimentation	186
4.8.1	Spare embryos and embryos created for biomedical research	186
4.8.2	Medical benefits vs. the embryo’s rights.	190
4.8.3	Religious beliefs and attitudes towards embryo experimentation.	194
4.9	Attitudes to PGD	197
4.10	Regulation of Embryo Research: EU vs. National Level.	198
4.11	Conclusions	200

5	Toward a Rational Debate on Embryo Research	205
	Introduction	205
5.1	Three Policy Positions: Prohibitive, Permissive and Regulatory	206
5.1.1	The Prohibitive Position	206
5.1.2	The Permissive Position	210
5.1.3	The Regulatory Stance	212
5.2	Rationality and Persuasiveness of Specific Arguments	217
5.2.1	Taboos	218
5.2.2	Redefinition	220
5.2.3	Emotions and the Rhetorical Language	221
5.2.4	Potentiality	221
5.2.5	Naturalism	223
5.2.6	Dignity	224
5.2.7	Rights	226
5.2.8	The Slippery Slope Argument	227
5.2.9	Caution	229
5.2.10	Injustice	230
5.3	The Need for and Limits of Procedural Solutions to Problems of Substantive Rationality	232
6	Recommendations	239
7	Glossary	245
8	Appendices	259
9	References	399
