

Table of Contents

1	Historical Introduction	1
1.1	Neutrinos and the Law of Weak Interactions	1
1.2	Detection of the Neutrino and the Discovery of Generations	7
1.3	Search for Intermediate Bosons to the Unified Theory of Electroweak Interactions	12
1.4	The Neutrino-Mass Quest	15
1.5	The Interest in Neutrinos Today	19
2	Standard Theory of Electroweak Interactions	23
2.1	Classical Theory of Weak Interactions	23
2.2	Weinberg–Salam Theory of Electroweak Interactions	24
2.2.1	$SU(2) \times U(1)$ Symmetry	24
2.2.2	The Gauge Fields	25
2.2.3	Spontaneous Symmetry Breaking and the Higgs Mechanism	27
2.2.4	Gauge Boson Mixing	29
2.2.5	Fermion Mass	30
2.2.6	Introduction of Quarks	31
2.2.7	Low-Energy Weak Interactions	31
2.2.8	Introduction of the Generations	33
2.3	Quantum Field Theory: The Renormalisable Gauge	35
2.4	Consistency of the Quantum Field Theory: Anomaly Cancellation	37
2.4.1	Renormalisability	37
2.4.2	Triangle Anomaly	38
2.4.3	Implications of Anomaly	43
2.5	Experimental Test	44
2.5.1	Electroweak Parameters	44
2.5.2	Higher Order Perturbations	46
2.5.3	Other Elementary Parameters in the Weinberg–Salam Theory	52
2.6	The Problem with the Higgs Sector and the Search for the Higgs Particle	52
2.6.1	Theoretical Considerations on the Higgs Mass	52

2.6.2	Empirical Limits on the Higgs Mass	56
2.6.3	Theoretical Implications of a ‘Small’ Higgs Mass	56
3	Applications of the Electroweak Theory	59
3.1	Physics with the Charged Current	59
3.2	Muon Decay	60
3.3	Weak Decays Involving Hadrons: Classification	62
3.4	Leptonic Decays of Mesons	64
3.5	Semileptonic Decays of Mesons	65
3.6	Theory of Nuclear Beta Decays.....	67
3.6.1	Fermi Theory	67
3.6.2	Classification of Nuclear Beta Decays	74
3.6.3	Electron Capture	75
3.6.4	$0^+ \rightarrow 0^+$ Transitions	78
3.6.5	Nuclear Structure and Gamow–Teller Matrix Elements	79
3.7	Hyperon Beta Decay	86
3.8	Determination of Quark Mixing Angles	87
3.9	Number of Generations.....	91
3.10	Neutrino–Lepton Scattering.....	92
3.11	Neutrino–Nucleon Scattering.....	97
3.12	Neutrino–Nucleus Scattering	101
3.12.1	General Considerations.....	101
3.12.2	Examples of Specific Reactions	106
3.12.3	Nuclear Excitation with the Neutral Current.....	113
3.12.4	Neutrino Reactions off Carbon	114
3.12.5	Neutrino Reactions off Deuterium	119
3.12.6	Neutrino–Nucleus Reactions at Middle–High Energies .	121
3.13	Single Pion Production.....	126
3.14	Deep-Inelastic Neutrino Scattering off Nucleons	129
3.15	Ultra-High-Energy Neutrino–Nucleon Scattering.....	133
3.16	Coherent Nuclear Scattering	134
3.17	Refractive Effects.....	135
3.18	Flavour-Changing Neutral Current.....	137
4	Neutrino Sources and Detection	143
4.1	Reactor Neutrinos	143
4.2	Accelerator Neutrinos	145
4.3	Atmospheric Neutrinos	148
4.4	Neutrinos from Stars.....	160
4.4.1	Theory of Stars: Fundamental Equations	160
4.4.2	Theory of Stars: Simple Solutions	163
4.4.3	Nuclear Reactions in Stars and Neutrino Emission: Formalism	166
4.4.4	Nuclear Reactions in the Sun and Solar Neutrinos	168

4.4.5	Accurate Modelling of the Sun	176
4.4.6	Solar Neutrino Problem	183
4.4.7	Neutrino Energy Losses	186
4.4.8	Evolution from the Main Sequence	190
4.4.9	White Dwarfs	194
4.5	Neutrinos from Type II Supernovae	196
4.5.1	Stellar Core Collapse: Type II Supernovae	196
4.5.2	Supernova Rate and Relic Neutrinos	204
4.6	Neutrinos in Cosmology	206
4.6.1	Elements of Cosmology	206
4.6.2	Radiation-Dominated Universe and the Thermal History	208
4.6.3	Universe in the Matter-Dominated Epoch	216
4.7	Geophysical Neutrinos	224
4.8	Detection of Low-Energy Neutrinos	227
4.8.1	Overview of Neutrino Detectors	227
4.8.2	Detection of Electrons: Čerenkov Light	228
4.8.3	Detection of Electrons: Scintillation	233
4.8.4	Background to Electron Detection	239
4.8.5	Radiochemical Detection	243
4.8.6	Other Types of Experiments	248
4.9	Other Astrophysical Sources of Neutrinos	250
4.9.1	Neutrino from Dark Matter Annihilation	250
4.9.2	Ultra-High-Energy Neutrinos	252
5	Properties of the Neutrino	255
5.1	Electromagnetic Properties	255
5.1.1	Electromagnetic Form Factors	255
5.1.2	Electric Charge	256
5.1.3	Magnetic and Electric Dipole Moments	259
5.1.4	Charge Radius	261
5.2	Limit on the Mass of Neutrinos	262
5.3	Neutrino Mass: Cosmological and Astrophysical Considerations	267
	Appendix: Cosmological Limits on the Mass of Heavy ‘Neutrinos’ ..	271
6	Massive Neutrinos	273
6.1	Massive Neutrinos – Overview	273
6.2	Dirac Matrices	274
6.3	Massless Neutrinos	276
6.4	Massive Majorana Neutrinos	277
6.5	Massive Dirac Neutrinos	278
6.6	Massive Neutrinos in the Weinberg–Salam Theory	278
6.7	Seesaw Mechanism	279
6.8	Majoron Model	281

6.9	Neutrino Mass Induced by Radiative Corrections	283
6.10	Models for Dirac Neutrinos	284
6.11	Pontecorvo's Neutrino Oscillation	286
7	Quantisation of the Majorana Field	289
7.1	Necessity of Quantisation	289
7.2	Unitary Equivalence of the Majorana and the Weyl Fields	289
7.3	Quantisation of Majorana Fermions	292
7.4	Simple Derivation of Feynman Propagators	296
7.5	Simple Examples of Applications	297
7.5.1	$N \rightarrow e_L^- + \varphi^{(+)}$	297
7.5.2	$N + N \rightarrow e_L^- + e_L^+$	299
7.6	Double Beta Decay	301
7.6.1	$0\nu 2\beta$ Decay Rate	302
7.6.2	$2\nu 2\beta$ Decay	305
7.6.3	Nuclear Matrix Elements	307
7.6.4	Experimental Techniques	313
7.6.5	Limit on the Majorana Neutrino Mass	315
7.6.6	Several Remarks Concerning Double Beta Decay	317
8	Generation Mixing of Neutrinos	321
8.1	Generation Mixing – the Case of Dirac Neutrinos	321
8.2	Generation Mixing – the Case of Majorana Neutrinos	323
8.3	Phases of Mixing Matrices	324
8.4	Neutrino Oscillation in Vacuum	327
8.4.1	Formulation	327
8.4.2	Neutrino Oscillation and the Uncertainty Principle	330
8.4.3	$\nu_L \rightarrow \nu_R^c$ Oscillation	334
8.5	Experimental Test for Neutrino Oscillation	335
8.5.1	Survey	335
8.5.2	Atmospheric Neutrino Oscillation Experiments	338
8.5.3	Reactor Experiments with an Extended Baseline	345
8.5.4	Long-Baseline Accelerator Experiments	346
8.5.5	Neutrino Oscillation in Solar Neutrinos	346
8.6	Neutrino Oscillation in Matter	348
8.6.1	Neutrino Conversion	348
8.6.2	Derivation of the Transition Probability	353
8.6.3	Derivation of the Landau–Zener Formula	355
8.6.4	Slab Model	358
8.6.5	The MSW Effect in the Solar-Neutrino Problem	359
8.7	The Effect of Earth on Neutrino Propagation	363
8.8	Solar Neutrino Analysis: Latest Results	369
8.9	Other Applications of the MSW Effect	373
8.10	Neutrino Oscillation: Summary	377
8.10.1	Present Status	377

8.10.2	Future Neutrino Experiments	379
8.11	CP Violation	380
8.11.1	CP Violation in Neutrino Oscillation	380
8.11.2	CP-Violation Characteristic of the Majorana Phase ...	384
9	Models for Massive Neutrinos	387
9.1	Beyond the Standard Model	387
9.2	Classification of Models for Neutrino Mass	391
9.3	Grand Unification: Introduction	394
9.3.1	SU(5) GUT	394
9.3.2	SUSY SU(5) GUT	402
9.3.3	Introduction of $B-L$ and Massive Neutrinos	409
9.3.4	Constraints on U(1) Symmetry Breaking: Cosmic String Formation	409
9.4	Left-Right Symmetry Model	410
9.5	Left-Right Symmetry in SO(10)	414
9.6	General Discussion of SO(10) Grand Unification	421
9.6.1	Symmetry-Breaking Pattern and the Neutrino Mass ..	421
9.6.2	Prediction of the Mass Scale	423
9.6.3	Phenomenology with SO(10) GUT	428
9.7	Model with Horizontal Gauge Symmetry	430
9.8	Seesaw Mechanism with Global Symmetry	431
9.8.1	Model with U(1) Symmetry	431
9.8.2	Model with Family Symmetry	432
9.8.3	Model for the Fourth-Generation Neutrino	434
9.9	Peccei-Quinn Symmetry and the Neutrino Mass	436
9.9.1	Strong CP Problem and Peccei-Quinn Symmetry	436
9.9.2	Model for the Neutrino Mass	438
9.9.3	Astrophysical and Cosmological Constraints	439
9.9.4	Domain Wall Problem	442
9.10	Heuristic Models for the Neutrino Mass Matrix	443
9.10.1	Model of Froggatt and Nielsen	444
9.10.2	Democratic Mass Matrix	447
9.10.3	Models for Other Textures	449
9.11	Neutrino Mass Matrix from Radiative Corrections	453
9.12	Brief Assessment of Models	454
	Appendix: Representation of SO(10) group	455
10	Magnetic Moment of the Neutrino	461
10.1	Neutrino Magnetic Moment in the Weinberg-Salam Model ...	461
10.2	Neutrino Magnetic Moment in the Left-Right Symmetric Model	464
10.3	Model with a Charged Scalar Particle	469
10.4	Variants of the Scalar Model	476
10.4.1	Voloshin's Symmetry	477

10.4.2	Helicity Suppression Mechanism	478
10.5	Astrophysical Significance of the Neutrino Magnetic Moment .	479
10.5.1	Solar Neutrino Problem	479
10.5.2	Neutrino Radiative Decay and Cosmology	483
10.5.3	Neutrino Magnetic Moment and the Early Universe . . .	485
11	Baryon Asymmetry in the Universe and Neutrinos	487
11.1	Introduction	487
11.2	Sphaleron-Induced Baryon-Number Violation	489
11.2.1	Instanton-Induced Baryon-Number Nonconservation . .	489
11.2.2	B Violation in Minkowski Space-Time	491
11.2.3	Sphalerons	492
11.2.4	The Rate of the B -Violating Process	493
11.2.5	Constraints on $B - L$ Violating Interactions	496
11.2.6	Electroweak Baryogenesis	499
11.3	Baryon-Number Production with GUT	501
11.4	Leptogenesis from Heavy Majorana Neutrinos	505
11.5	Affleck–Dine Baryogenesis and Its Variants	510
11.6	Summary	515
	Note Added in Proof	517
	References	521
	Index	581

Physics of Neutrinos
and Application to Astrophysics

Fukugita, M.; Yanagida, T.

2003, XII, 593 p., Hardcover

ISBN: 978-3-540-43800-7
