1 Strategies for Introducing Renewable Energies and the Contribution of Photovoltaics

J. Nitsch and F. Staiß	1
1.1 Development of the World Photovoltaic Market in the Past	1
1.1.1 Development of Module Production and Prices in the Past ...	1
1.1.2 Development by Applications	3
1.1.3 Development by Regions	6
1.2 Present Electricity Demand and Potential of Renewable Energies ..	8
1.2.1 Present Structure of Global Electricity Production and Demand	8
1.2.2 Potentials of Renewable Energies	10
1.3 Global Prospects for Renewable Energies	15
1.3.1 Scenarios for Future Global Energy Demand and Generation .	15
1.3.2 Global Contribution of Renewables in Detail and the Possible Role of Photovoltaics	19
1.3.3 Prospects for Renewable Energies in Europe and the Contribution of Photovoltaics	24
1.4 Prospects for Renewable Energies in Germany and the Contribution of Photovoltaics	29
1.5 Conclusions and Recommendations	36
References	37

2 Solar Modules and Photovoltaic Systems

J. Luther, K. Preiser, and G. Willeke	41
2.1 Basic Principles of Photovoltaic Energy Conversion	41
2.1.1 The Standard Screen Printed Crystalline Silicon Solar Cell ...	47
2.1.2 High-Efficiency Silicon Solar Cells	49
2.1.3 Module Manufacturing	51
2.1.4 Thin Film Solar Modules	52
2.1.5 Amorphous Silicon (a-Si)	55
2.1.6 Copper Indium Diselenide (CIS)	56
2.1.7 Cadmium Telluride (CdTe)	58
2.1.8 Raw Materials and Resources	59
2.2 Emerging Solar Cell Technologies	60
2.2.1 Solar Cells Based on GaAs and Other III-V Compounds	60

2.2.2 Crystalline Silicon Thin-Film Solar Cells	62
2.2.3 Organic and Nanocrystalline Solar Cells	63
2.3 Photovoltaic Systems – Solar Electricity Supply	64
2.3.1 Different Types of Photovoltaic Systems	64
2.3.2 Off-Grid Solar Electric Systems	65
2.3.3 Remote Habitation	72
2.3.4 Grid-Connected Photovoltaic Systems	92
2.3.5 Fluctuations of Photovoltaic Power Production and Storage Requirements	99
References	103
 3 Industrial Technology and Cost Reduction Assessment	
T. Schott	107
3.1 Photovoltaics as a Technology and Industrial Development	107
3.1.1 PV Production as an Industry of Its Own Kind	111
3.1.2 Industrial Goals	114
3.1.3 Industrial Structures	117
3.1.4 The Silicon Photovoltaic Industry	121
3.1.5 Thin-Film Photovoltaic Technologies	124
3.2 Cost Structures and Reduction Potential	128
3.2.1 Crystalline Silicon Modules	128
3.2.2 The Crystalline Silicon Case	129
3.2.3 Thin-Film Technologies	134
3.2.4 Cost Scenario for 2010 and Beyond	137
3.3 System Approach	140
3.3.1 Cost Reduction Potential of Balance of System Components . .	142
3.4 The Export Drama of Photovoltaics	153
3.5 Strategies for Photovoltaics Industrialization	157
References	167
Experiences and Lessons from a Pilot Line	170
References	178
 4 Life Cycle Assessment of Photovoltaic Systems – Trying To Fight Deep-Seated Prejudices	
M. Pehnt, A. Bubenzer, A. Räuber	179
4.1 Introduction	179
4.2 Methodology, Terms, and Definitions	179
4.2.1 Cumulative Energy Demand and Energy Payback Time	179
4.2.2 The Overall Approach: Life Cycle Assessment	183
4.3 Life Cycle of Photovoltaic Systems	187
4.3.1 Important Parameters for the Cumulative Energy Demand (CED) and Life Cycle Assessment (LCA) of Photovoltaics . . .	187
4.3.2 Example: Life Cycle of Polycrystalline (p-Si) Silicon Photovoltaic Systems	188

4.3.3 Aspects of LCA for Other Photovoltaic Technologies	196
4.3.4 Future Developments Reducing Environmental Impacts	200
4.3.5 Comparison of Photovoltaics with Conventional Power Plants	201
4.4 Availability of Materials for Photovoltaic Systems	204
4.4.1 Crystalline Si Cells	204
4.4.2 Thin Film Cells	204
4.4.3 Materials for the Balance of System	207
4.5 Conclusions	208
4.5.1 Energy Payback Time	208
4.5.2 Life Cycle Assessment (LCA)	208
4.5.3 General Issues	210
References	210
 5 Strategies in Photovoltaic Research and Development – R&D and History	
A. Räuber	215
5.1 Introduction	215
5.1.1 Structure of this Chapter	215
5.1.2 Photovoltaics – a Challenge for Governments, Society, and Industry	215
5.2 Chronology of Development	216
5.2.1 First Silicon and Thin-Film Solar Cells	216
5.2.2 Current Status	217
5.3 Role of the State in Research and Development	217
5.3.1 Legislation	217
5.3.2 Financial Engagement	219
5.3.3 The Organization of R&D Funding	224
5.3.4 Directions of Research	225
5.3.5 International Activities	226
5.4 Role of Industry	227
5.4.1 Engaged Industries	227
5.4.2 Strategy of the Companies	228
5.4.3 Partnership Between State and Industry	229
5.5 Role of Research Establishments	231
5.5.1 Pioneers in the Development of New Technologies	231
5.5.2 Research Organizations	232
5.6 Selected Examples	233
5.6.1 The U.S. Federal PV Programme	233
5.6.2 The Japanese Sunshine Project	235
5.6.3 The Activities of the European Union	236
5.6.4 IEA Photovoltaic Power Systems Program	237
5.7 Future	239
5.7.1 Further Need for R&D	239
5.7.2 Responsibility of the State for Further Progress	239

5.8 Further Reading	240
5.8.1 Information Sources	240
6 Strategies in Photovoltaic Research and Development – Market Introduction Programs	
F. Staiß and A. Räuber	243
6.1 Introduction	243
6.2 Market Introduction Efforts in Industrialized Countries	243
6.3 Programs in Developing Countries	246
6.4 Special Examples	247
6.4.1 Germany	247
6.4.2 Federal Government	247
6.4.3 Federal States	249
6.4.4 Local Authorities	249
6.4.5 Japan	250
6.5 Conclusion	251
References	254
Acronyms and Abbreviations	255
Participants of the Reisenburg Workshop	259
Index	263

Photovoltaics Guidebook for Decision-Makers
Technological Status and Potential Role in Energy
Economy

Bubenzer, A.; Luther, J. (Eds.)

2003, XXX, 266 p., Hardcover

ISBN: 978-3-540-41327-1
