Introduction	XIII
The Goals of Data Collection and Its Statistical Treatment in the Earth Sciences	XIII
Acknowledgements	XVI
Abbreviated Glossary	XVII
1 Sampling Schemes	1
1.1 Sampling Versus Spatial Sampling	1
1.2 Introductory Concepts	2
1.3 Examples of Spatial Distributions	3
1.4 Sampling Scales and the Periodicity of Geological Features	3
1.5 Geological Examples of Spatial Variation	5
1.6 Site Distributions	8
1.7 Site Spacing	11
1.8 Locally Planned Sampling Schemes	12
1.9 Monte-Carlo “Sampling”	16
1.10 Geometrical Limitations to Sampling Imposed by Geological Structure	17
1.11 Fabric Influences on Observations: the Cut-effect	17
1.12 Interpreting Spatial Variation of Scalar Values from Samples	24
1.12.1 Contouring	24
1.12.2 Trend-Surface Analysis	29
2 Central Tendency and Dispersion	33
2.1 Central Tendency: Mean, Median and Mode	33
2.1.1 Arithmetic Mean	35
2.1.2 Median and Mode	37
2.1.3 Weighted Mean	37
2.2 Other Averages	37
2.3 Histograms and Frequency Distributions	39
2.4 Histograms and Their Relation to Continuous Frequency Distributions	39
2.5 Dispersion: Inter-Quartile Range, Half-Width and Standard Deviation	42
2.6 Review of some Statistics for Frequency Distributions	45

2.7	Detection Limits and Precision with Analytical Data	45
2.8	Sample Size	46
2.9	Mean and Variance of Spatially Distributed Samples: Kriging	47
3	Theoretical Distributions: Binomial, Poisson and Normal Distributions	61
3.1	The Binomial Distribution	61
3.2	The Poisson Distribution	68
3.3	The Normal Distribution	70
3.4	The Links Between Certain Theoretical Probability Distributions	74
4	Statistical Inference: Estimation and Hypothesis Tests . .	77
4.1	The Central Limit Theorem	77
4.2	Estimation	79
4.2.1	Standard Error of the Sample Mean	79
4.2.2	Confidence Interval That Contains the Population Mean .	79
4.2.3	Confidence Intervals by the Bootstrap Method	80
4.2.4	Estimation and Bayesian Statistics	81
4.2.5	Error Bars and Confidence Regions on Graphs	82
4.3	Hypothesis Testing	89
4.4	Mechanics of Hypothesis Testing	91
4.5	Further Considerations in Hypothesis Testing	92
4.5.1	Selecting H_0 ; One- and Two-Tailed Tests	92
4.5.2	Selecting α	93
4.5.3	Choosing a Test Statistic and a Sampling Distribution . .	93
4.5.4	Interpreting the Decision	94
4.5.5	Communicating the Result	96
4.6	Sampling Distributions Used in Hypothesis Tests	98
4.6.1	The t-Distribution (Comparing Means)	98
4.6.2	The F-Distribution (Comparing Variances s_1, s_2)	99
4.7	Multiple Independent Variables: Paired Samples and Randomised Block Design	101
4.8	Comparing Multiple Samples: Analysis of Variance ("ANOVA")	103
4.9	ANOVA: Identifying Important Variables in a Multi-Variable System	106
4.10	Informal Uses of Probability to Assess "Importance"	109
5	Comparing Frequency-Distribution Curves	111
5.1	The Empirical Rule to Compare with the Normal Distribution	111
5.2	Linearisation Using Normal-Probability Paper to Compare with the Normal Distribution	111
5.3	Normal Scores to Compare with the Normal Distribution	113

5.4	Standardisation of Observations to Compare with the Normal Distribution	113
5.5	Cumulative Frequency Distributions	115
5.5.1	Application of Cumulative Frequency Plots in Sedimentology	116
5.5.2	Interpreting Natural Processes from Frequency Distributions	117
5.6	Log-Frequency Distributions; the Logarithmic and Other Transformations	120
5.7	Quantified Comparison of Frequency Distributions: Non-parametric Statistics	123
5.7.1	χ^2 -Distribution and Goodness-of-Fit	123
5.7.2	χ^2 -Distribution and Contingency Tables	126
5.7.3	χ^2 -Distribution and Single-Sample Variance	129
5.8	Kolmogorov-Smirnov Two-Sample Test	129
6	Regression: Linear, Curvilinear and Multilinear	133
6.1	Control and Response Variables	133
6.2	Associated Variables Without Clear Control	135
6.3	Lurking Variables	136
6.4	Basis of Linear Regression	138
6.5	An Introduction to the Correlation Coefficient	140
6.6	Confidence Interval About the Regression Line	140
6.7	The Major-Axis Line and the Reduced Major-Axis Line	141
6.8	Linearisation to Facilitate Regression Analysis	141
6.9	Directly Fitting Curves to the Data	144
6.10	Multiple Regression	152
7	Correlation and Comparison of Variables	157
7.1	Covariance and the Correlation Coefficient (R)	159
7.2	Spearman's Rank-Correlation Coefficient (R_s)	159
7.3	Coefficient of Determination, R^2	161
7.4	Significance of Correlation	161
7.5	Confidence in the Regression Line	162
7.6	Progress, Problems and Pitfalls with Simple Linear Regression	164
7.7	Special Cases in Correlation	172
7.7.1	Co-linear Variables	172
7.7.2	The Bivariate Normal Distribution	174
7.7.3	Constant Sums, Ratios and the Closure Restraint	175
7.7.4	Pearce Element Ratios	178
7.7.5	Triangular Diagrams	178
7.7.6	Multiple and Partial Correlation	179
7.8	Multivariate Situations	181
7.9	Linear Discriminant Function Analysis (LDFA)	183
7.10	Cluster Analysis	184

8	Sequences, Cycles and Time Series	187
8.1	Runs Analysis	190
8.2	Rank Correlation	191
8.3	Markov Chain Analysis: Identifying Cyclicality	192
8.4	Time Series	194
8.5	Stationary and Non-stationary Behaviour	197
8.6	Cumulative Sum Plot (<i>CUSUM</i>)	200
8.7	Moving Averages	201
8.8	Regression Lines and Curve Fitting	203
8.9	Data Stacking Where the Control Period Is Predictable	204
8.10	Autocorrelation to Reveal Periodicity	204
8.11	Isolating Fixed Waveforms by Fourier Analysis	207
8.12	Deconvolution	209
8.13	Power Spectra of Geomagnetic Secular Variation	212
8.14	Time-Series Analysis of Geomagnetic Polarity	219
8.15	Precise, Time-Proxied Series	219
9	Circular Orientation Data	221
9.1	Axes, Directions or Unit Vectors and Vectors	222
9.2	Rose Diagrams	228
9.3	Idiosyncrasies of Orientation Data	233
9.3.1	Axes	233
9.3.2	Unit Vectors	233
9.3.3	Vectors	233
9.3.4	Special Characteristics of Orientation Data	233
9.4	Circular Statistics: No Theoretical Model Assumed	236
9.4.1	The Mean Orientation	236
9.4.2	Mode and Median	239
9.4.3	Descriptors of Angular Dispersion	239
9.5	Theoretical Orientation Distributions	241
9.5.1	Estimation and Significance with von Mises ¹ Model	243
9.5.2	Estimation with small or Dispersed Samples	245
10	Spherical Orientation Data	247
10.1	Visualising Orientations in Three-Dimensions: the Stereogram	247
10.2	Recording and Reporting Three-Dimensional Orientations	252
10.3	Field Measurements, Oriented Samples and Associated Errors	255
10.4	Stereogram Density Contours	258
10.5	The Mean Orientation of an Axis, Direction or Vector	262
10.6	Theoretical Orientation Distributions in Three Dimensions	264
10.6.1	Circular Concentration: Fisher Model	269
10.6.2	Elliptical Concentration: Bingham Model	273
10.6.3	Elliptical Concentration: Henry-Le Goff Bivariate Normal Approximation	275
10.7	Statistical Models: Circular or Elliptical Clusters?	276

10.8	Tests for Preferred Orientation and Confidence Limits for the Mean Orientation	282
10.8.1	Tests for Preferred Orientation	283
10.8.2	Approximate Comparison of Mean Orientations with Confidence Cones	285
10.9	Symmetry Compatibility of Orientation Distributions and Their Causative Processes	285
10.10	The Fabric Ellipsoid	289
10.11	Shape of the Orientation Distribution Ellipsoid	290
11	Spherical Orientation Data: Tensors	293
11.1	Second-Rank Tensors in Geology	294
11.2	Measurement of Second-Rank Tensor Anisotropy	297
11.3	Measurement Procedures for Anisotropy	299
11.4	Interpretations of Anisotropy Using Second-Rank Tensors in Rocks and Minerals	302
11.5	Crystallographic Control of AMS	303
11.6	Property Anisotropy of a Polycrystalline Aggregate	307
11.7	Mean Tensor and its Uncertainty for Multiple Specimens	308
11.8	The Mean Tensor: Hext-Jelinek Statistics	309
11.9	Examples of Tensor Orientation Distributions and the Confidence Cones of Their Principal Axes	310
11.10	Orientation Distributions Involving Multiple Fabrics and Fabric Heterogeneity	316
11.11	Heterogeneous or Multiple Fabrics and the Mean Orientation of Sample Tensors	317
11.12	Specimen-Level Uncertainty and Its Contribution to Sample-Mean-Tensor Confidence Limits	320
11.12.1	Jelinek Statistics	320
11.12.2	Le Goff-Henry Bivariate Fisher Statistics	324
12	Appendix	327
	Appendix I: Errors in Compound Quantities	327
	Appendix II: Notes on the Manual Use of Stereograms	328
	Plotting Lines, Planes and Poles to Planes	328
	Great Circles, Small Circles; Dip Plunge and Rake	331
	Rotations: For Convenient Viewing or for Tectonic Restorations	332
	Contouring	334
	References	337

Statistics of Earth Science Data
Their Distribution in Time, Space and Orientation
Borradaile, G.J.
2003, XXVII, 351 p., Hardcover
