Introduction	1
---------------------------	---

Part I. Single Atom in Transverse Electromagnetic Field

1. Quantum Principles of Two-Level Atomic Spectroscopy ...	7
1.1 Hamiltonian of an Electron–Photon System	7
1.2 Transverse Electromagnetic Field as a Photon Gas	9
1.3 Electron–Photon Interaction. Rabi Frequency	13
1.4 Equations for Transition Amplitudes	16
1.5 Density Matrix of the System. Relation to Transition Amplitudes	18
2. Two-Photon Start–Stop Correlator	21
2.1 Photon Counting in the Start–Stop Regime	21
2.2 Spontaneous Fluorescence. Temporal Evolution of Fluorescence Line Shape	22
2.3 Optical Absorption Line. Equations for Transition Amplitudes	27
2.4 Temporal Evolution of Probabilities	30
2.5 Temporal Evolution of Absorption Line Shape	33
2.6 Two-Photon Start–Stop Correlator	35
3. Full Two-Photon Correlator	39
3.1 Counting All Photon Pairs	39
3.2 Infinite Set of Equations for Transition Amplitudes. Discussion of Main Approximations	40
3.3 Equations Governing the Full Two-Photon Correlator	43
3.4 Relating the Full and Start–Stop Two-Photon Correlators	46
3.5 Frequency and Time Dependence of Full and Start–Stop Two-Photon Correlators	48

Part II. Phonons and Tunneling Excitations

4. Adiabatic Interaction	55
4.1 Theoretical Description of Interacting Electrons and Nuclei ..	55
4.2 Franck–Condon and Herzberg–Teller Interactions	57
5. Natural Vibrations of Solids	61
5.1 Acoustic and Optical Phonons	61
5.2 Localized Phonon Modes	65
6. Tunneling Systems in Solids	75
6.1 Tunneling Degrees of Freedom in Complex Molecules and Amorphous Solids	75
6.2 Rate Equations for Tunneling Systems	78
6.3 One-Phonon Transition Probabilities in Tunneling Systems ..	80
6.4 Kinetics of Tunneling Systems	84
6.5 Tunneling Systems in Polymers and Glasses	86
6.6 Two-Level Systems (TLS). Tunnelons. Tunnelon–Phonon and Electron–Tunnelon Interaction	90

Part III. Spectroscopy of a Single Impurity Center

7. Density Matrix for an Impurity Center	95
7.1 Transition Amplitudes in the Electron–Phonon–Tunnelon System	95
7.2 Equations for the Density Matrix	99
7.3 Reducing Equations for the Full Density Matrix to the Optical Bloch Equations	104
8. One- and Two-Photon Counting Methods in the Spectroscopy of a Single Impurity Center	109
8.1 Two-Photon Correlator for a Two-Level Impurity Center	109
8.2 Influence of a Triplet Level on the Two-Photon Correlator. Photon Bunching and Antibunching	112
8.3 One-Photon Counting Method. Quantum Trajectories	119

**Part IV. Optical Band Shape Theory
for Impurity Centers**

9. Stochastic Theories of Line Broadening	125
9.1 Dynamic and Stochastic Approaches to the Line-Broadening Problem	125
9.2 Stochastic Theory Due to Anderson and Weiss	126
9.3 Anderson Theory for Optical Lines	129
9.4 Exchange Model for Line Broadening	131
10. Dynamical Theory of Electron–Phonon Bands	137
10.1 Absorption Cross-Section and the Probability of Light Emission	138
10.2 Electron–Phonon Optical Transitions in a Condon Approximation at $T = 0$	139
10.3 Zero-Phonon Line and Phonon Side Band	142
10.4 Influence of Temperature on the ZPL Intensity	149
10.5 Optical Bands for Strong Electron–Phonon Coupling	150
11. Vibronic Spectra of Complex Molecules	153
11.1 Vibronic Spectra in the Condon Approximation. Similarity Rule in Vibronic Spectra	153
11.2 Influence of the HT Interaction on Optical Bands	156
11.3 Interference of HT and FC Amplitudes. Breakdown of the Mirror Symmetry of Conjugate Absorption and Fluorescence Bands	158
11.4 Theoretical Treatment of Electron–Phonon and Vibronic Spectra	161
12. Dynamical Theory of Line Broadening	167
12.1 Specific Features of the Quadratic FC Interaction	168
12.2 Cumulant Expansion of the Dipolar Correlator	170
12.3 Broadening and Shift of the ZPL at Weak Coupling with Acoustic and Localized Phonons	173
12.4 Quantum Phonon Green Functions	177
12.5 Temperature Broadening and Shift of the ZPL at Arbitrary Strength of the Quadratic FC Interaction	179
12.6 General Expression for the Cumulant Function of an Electron–Phonon System	186
12.7 Theoretical Treatment of Experimental Data for Temperature Broadening of the ZPL	187

Part V. Methods of Selective Spectroscopy

13. Fluorescence Line Narrowing	195
13.1 Frequency Selection of Molecules by Laser Excitation	195
13.2 Fluorescence Line Narrowing and Its Relation to the Full Two-Photon Correlator	198
13.3 Laser Fluorescence Analysis	202
14. Spectral Hole Burning in Inhomogeneous Optical Bands ..	205
14.1 Transient Spectral Hole Burning. Relation to the Full Two-Photon Correlator	205
14.2 Persistent Spectral Holes	209
14.3 Kinetics of Persistent Hole Burning. Hole Shape in the Short Time Limit	213
14.4 Hole Burning with Photoactive Photoproduct. Antiholes	216
14.5 Polarization Aspects in Spectral Holes and Antiholes	221
14.6 Photon-Gated Persistent Spectral Hole Burning	226

Part VI. Transient Coherent Phenomena in Solids

15. Coherent Radiation of Molecular Ensembles	233
15.1 Dephasing and Energy Relaxation. Coherent Spontaneous Emission	233
15.2 Fast Optical Dephasing	237
16. Photon Echo	241
16.1 Interaction of a Single Atom with a Classical Electromagnetic Field	241
16.2 Molecule Interacting with a Classical Electromagnetic Field, Phonons, and Tunnelons	244
16.3 Simplest Theory of the Two-Pulse Photon Echo	246
16.4 Bloch Vector and Its Temporal Evolution	249
16.5 Exponential Two-Pulse Photon Echo	251
16.6 Three-Pulse Photon Echo	255
16.7 Long-Lived 3PE	258
16.8 Space Anisotropy of Echo Radiation	261
17. Nonexponential Photon Echo	263
17.1 Generalized Bloch Vector	263
17.2 Long-Lived Stimulated Photon Echo	265
17.3 Picosecond SPE	271
17.4 Two-Pulse Femtosecond Photon Echo	272
17.5 3PE at Arbitrary Waiting Time t_w	278

**Part VII. Low Temperature Spectral Diffusion
in Polymers and Glasses**

18. Theory of Electron–Tunnelon Optical Band	283
18.1 General Expression for the Cumulant Function of the Electron–Tunnelon System	284
18.2 Tunnelon Green Function	288
18.3 Temperature Broadening of the Zero Tunnelon Optical Line	289
18.4 Dipolar Correlator for a Chromophore–TLS System. Solution of the Integral Equation	292
18.5 Electron–Tunnelon Optical Band Shape Function	294
19. Chromophore Interacting with Phonons and TLSs Which Are not in Thermal Equilibrium	297
19.1 Hamiltonian of the Electron–Phonon–Tunnelon System	297
19.2 Equations for the Density Matrix of the Electron–Phonon–Tunnelon System	299
19.3 Spontaneous and Light-Induced Transitions in TLSs	305
19.4 Interaction with One TLS. Approximate Solution	307
19.5 Interaction with Many TLSs Undergoing Spontaneous Tunneling	310
20. Dynamical Theory of Spectral Diffusion	313
20.1 Absorption Coefficient of a Single Guest Molecule Interacting with Nonequilibrium TLSs	313
20.2 Dependence of the Optical Dephasing Time T_2 on the Time Scale of the Experiment	317
20.3 Logarithmic Temporal Line Broadening. Deviation from the Logarithmic Temporal Law	321
21. Theory of Tunneling Transitions in TLSs	325
21.1 General Formulas for the Tunneling Probability	325
21.2 Inelastic Tunneling Assisted by Acoustic and Localized Phonon Modes	328
21.3 Elastic Tunneling	332
22. Investigating TLS Relaxation by Single-Molecule Spectroscopy	333
22.1 Two-Photon Correlator of a Molecule Interacting with TLSs	333
22.2 Spontaneous and Light-Induced Jumps of the Optical Line. Relation to Hole Burning	336
22.3 Analysis of Complicated Spectral Trajectories Using the Two-Photon Correlator	338

XII Contents

22.4 Single-Molecule Chemical Reactions	340
22.5 Manifestation of Spectral Diffusion in the Two-Photon Correlator	341
22.6 Diversity of the Local Dynamics of Individual Molecules	342
22.7 Contribution to the Optical Band from Different Types of TLS	345
22.8 Deviations from the Standard TLS Model	346
Appendices	349
A. Calculation of the Function $\gamma(\omega)$	349
B. Probability of Spontaneous Photon Emission	350
C. Unitarity of Amplitudes	351
D. Derivation of (3.8)	351
E. Derivation of (3.24)	352
F. Proof of the Approximation (7.16)	352
G. The Wick–Bloch–Dominicis Theorem for Bosons	353
H. Influence of FC and HT Interactions on the Optical Band Shape Function	355
I. Cumulant Expansion	359
J. Relation Between Phonon Green Functions	361
K. Shift of the ZPL at $T = 0$	363
L. Derivation of (17.65)	364
M. The Wick–Bloch–Dominicis Theorem for Fermions	365
N. Derivation of (18.37) and (18.38)	367
O. Derivation of (18.53)	368
P. Derivation of (18.60)	369
Q. Stochastic Approach to Spectral Diffusion	370
Bibliography	375
Index	381

Selective Spectroscopy of Single Molecules

Osad'ko, I.

2003, XII, 382 p., Hardcover

ISBN: 978-3-540-44101-4
