## 1 Interview with Willi Jäger

<i>Willi Jäger in discussion with Markus Kirkilionis, Susanne Krömker, Rolf Rannacher, and Friedrich Tomi.....</i>	1
--	---

## 2 Spatio-Temporal Dynamics of Reaction-Diffusion Patterns

<i>Bernold Fiedler, Arnd Scheel .....</i>	23
2.1 Introduction and Overview .....	23
2.2 One Space Dimension: Global Attractors .....	27
2.2.1 Lyapunov Functions, Comparison Principles, and Sturm Property.....	27
Lyapunov functions .....	27
Comparison principles .....	29
Sturm property, revisited .....	30
2.2.2 Sturm Attractors on the Interval.....	33
Global attractors .....	33
Sturm attractors and Sturm permutations .....	34
Sturm permutations and heteroclinics .....	38
Combinatorics of Sturm attractors .....	41
2.2.3 Sturm Attractors on the Circle .....	45
Poincaré-Bendixson theory .....	45
Heteroclinic connections of rotating waves .....	47
2.3 One Unbounded Space-Dimension: Travelling Waves .....	51
2.3.1 Unbounded Domains and Essential Spectra .....	51
From bounded to unbounded domains .....	51
Spectra of travelling waves: group velocities and Fredholm indices .....	53
2.3.2 Instabilities of Travelling Waves .....	60
Instability of a front caused by point spectrum .....	61
The Turing instability .....	61
Essential Hopf instability of a front .....	64
Instability of a pulse caused by the essential spectrum .....	67
Fredholm indices and essential instabilities .....	67
Spatial dynamics and essential instabilities .....	70

2.3.3	From Unbounded to Large Domains: Absolute Versus Essential Spectra .....	74
2.4	Two Space Dimensions: Existence of Spiral Waves .....	80
2.4.1	Kinematics and its Defects .....	80
	Curvature flow of Archimedean spirals .....	82
	The front-back matching problem .....	83
2.4.2	Archimedean Spiral Waves in Radial Dynamics .....	86
	Rigid rotation and asymptotic wavetrains .....	86
	Linear and nonlinear group velocities .....	88
	Characterizing Archimedean spirals .....	89
2.4.3	Bifurcation to Spiral Waves .....	91
2.5	Two Space Dimensions: Bifurcations from Spiral Waves .....	93
2.5.1	Phenomenology of Spiral Instabilities .....	93
2.5.2	Meandering Spirals and Euclidean Symmetry .....	95
	Euclidean equivariance .....	96
	Relative center manifolds .....	97
	Palais coordinates .....	98
	Spiral tip motion, Hopf meandering, and drift resonance .....	99
	Relative normal forms .....	102
	Relative Hopf resonance .....	104
	Relative Takens-Bogdanov bifurcation .....	105
2.5.3	Spectra of Spiral Waves .....	107
	The eigenvalue problem for spiral waves: core versus farfield ..	107
	Spatial Floquet theory and the dispersion relation of wavetrains	109
	Relative Morse indices and essential spectra of spiral waves ..	111
	Absolute spectra of spiral waves .....	114
	Point spectrum and the shape of eigenfunctions .....	116
2.5.4	Comparison with Experiments .....	118
	Meander instabilities .....	118
	Farfield and core breakup .....	120
2.6	Three Space Dimensions: Scroll Waves .....	123
2.6.1	Filaments, Scrolls, and Twists .....	123
	Spirals, tips, and Brouwer degree .....	124
	Scroll waves, filaments, and twists .....	124
2.6.2	Generic Changes of Scroll Filament Topology .....	127
	Generic level sets .....	128
	Sturm property, revisited .....	129
	Comparison principle and nodal domains .....	130
	Annihilation of spiral tips .....	131
	Collisions of scroll wave filaments .....	131
2.6.3	Numerical Simulations .....	134
	References .....	140

### 3 Some Nonclassical Trends in Parabolic and Parabolic-like Evolutions

<i>Paul Fife</i> .....	153
3.1 Introduction .....	153
3.2 The Simplest Nonlocal Parabolic-like Evolution and its Relatives .....	154
3.2.1 Comparison Between the Local and Nonlocal Equations ....	156
3.2.2 Models from Statistical Mechanics .....	157
3.2.3 Related Nonlocal Evolutions .....	158
3.2.4 Digression on the Role of Gradient Flows in Modeling .....	158
3.2.5 The Issue of Discontinuous Profiles in the Nonlocal Problem	160
3.3 The Simplest Pattern-Forming Parabolic Equation.....	160
3.3.1 Overview .....	160
3.3.2 Spinodal Decomposition in Higher Dimensions.....	162
3.4 Layer Phenomena Related to the Cahn-Hilliard Equation .....	164
3.4.1 The Slowness of Some Motions .....	164
Phenomena in 1D.....	164
Bubbles and such .....	165
3.4.2 Reduction to the Mullins-Sekerka Problem .....	165
3.4.3 Further Reductions: Ripening .....	166
3.5 Patterning Due to Competition in General Gradient Systems.....	168
3.5.1 An Abstract Setting.....	168
Examples .....	169
Threshold results .....	170
Properties of the minimizers .....	170
Restriction to real-valued functions .....	170
3.5.2 Conserved Evolutions .....	171
3.5.3 A Paradigm.....	171
3.6 Ginzburg-Landau Energies with Nonlocal Additions .....	171
3.6.1 A Prototypical Inverse Elliptic Reduction .....	172
3.7 Free Boundary Reductions.....	173
3.8 Another Kind of Competition .....	175
3.8.1 Models for Copolymers .....	176
3.9 Conclusion .....	177
References .....	178

### 4 Mathematical Aspects of Design of Beam Shaping Surfaces in Geometrical Optics

<i>Vladimir Oliker</i> .....	193
4.1 Introduction .....	193
4.2 Creating a Prescribed Intensity Distribution in the Far-Field .....	195

4.2.1	Statement of the Problem	195
4.2.2	Weak Formulation of the Problem	196
4.2.3	Strong Solutions of the Reflector Problem	200
4.2.4	Existence, Uniqueness and Regularity	200
4.2.5	Computational Methods	203
	The method of supporting paraboloids (SP method)	203
4.2.6	Open Problems	204
4.3	Creating a Prescribed Intensity Distribution	
	in the Near-Field	205
4.3.1	Statement of the Near-Field (NF) Reflector Problem	206
4.3.2	Weak Formulation and Solution	
	of the NF Reflector Problem	207
4.3.3	Some Open Problems	210
4.4	Two-Reflector System for Transforming	
	a Beam of Parallel Rays	210
4.4.1	Statement of the Problem	211
4.4.2	Properties of Reflectors $R_1$ and $R_2$	214
4.4.3	Weak Formulation and Weak Solutions	215
4.4.4	Regularity and Numerics	218
4.5	Two-Reflector System with a Point Source	219
	References	222

## 5 Recent Developments in Multiscale Problems Coming from Fluid Mechanics

<i>Andro Mikelić</i>		225
5.1	Homogenization of Flow Problems in the Presence	
	of Rough Boundaries and Interfaces	226
5.1.1	Wall Laws at Rough Boundaries	226
	Introduction	226
	Navier's boundary layer	228
	Justification of the Navier's slip condition for the laminar 3D	
	Couette flow	230
5.1.2	Drag Reduction and Homogenization	236
5.1.3	Law of Beavers and Joseph	238
	Introduction	238
	Modeling of the experiment by Beavers and Joseph	241
	Navier's boundary layer	243
	Justification of the law by Beavers and Joseph	245
5.2	Interactions Flow-Structures	249
5.2.1	Introduction	249
5.2.2	Biot's Model Without Dissipation	252
5.2.3	Biot's Model with Dissipation	259
	References	264

**6 From Molecular Dynamics****to Conformation Dynamics in Drug Design**

<i>Peter Deuffhard</i> .....	269
6.1 Introduction .....	269
6.2 Classical Molecular Dynamics .....	270
6.2.1 Hamiltonian Differential Equations.....	270
6.2.2 Condition of Molecular Initial Value Problems .....	271
Example: Trinucleotide ACC. ....	272
6.3 Metastable Conformations as Almost Invariant Sets.....	272
6.3.1 Perron–Frobenius Operator .....	274
6.3.2 Stochastic Transition Operator .....	274
6.3.3 Perron Cluster Analysis (PCCA) .....	276
6.4 Approximation of the Transition Operator .....	280
Example: HIV protease inhibitor VX-478.....	284
6.5 Perspectives .....	286
References .....	286

**7 A Posteriori Error Estimates****and Adaptive Methods for Hyperbolic****and Convection Dominated Parabolic****Conservation Laws**

<i>Dietmar Kröner, Marc Küther, Mario Ohlberger, Christian Rohde</i> .....	289
7.1 Introduction .....	289
7.2 A Posteriori Error Estimates	
for Scalar Hyperbolic Conservation Laws .....	291
7.2.1 Cell Centered Finite Volume Approximations.....	292
7.2.2 Staggered Lax-Friedrichs Approximations .....	295
7.3 A Posteriori Error Estimates for Weakly Coupled Systems .....	298
The finite volume scheme. ....	299
7.4 Numerical Experiments .....	302
7.4.1 Transport of Contaminants with Degradation .....	302
7.5 Conclusion .....	304
References .....	305

**8 On Anisotropic Geometric Diffusion****in 3D Image Processing and Image Sequence Analysis**

<i>Karol Mikula, Tobias Preußer, Martin Rumpf, Fiorella Sgallari</i> .....	307
8.1 Introduction .....	307
8.2 Review of Related Work.....	308
8.3 Anisotropic Geometric Diffusion on Still Images .....	311
8.4 Processing Image Sequences	
via Coupled Anisotropic Geometric Diffusion .....	315
8.5 Local Curvature and Motion Evaluation .....	316
8.6 Finite Element Discretization .....	317
References .....	320

**9 Population Dynamics:****A Mathematical Bird's Eye View**

<i>Odo Diekmann, Markus Kirkilionis</i> .....	323
9.1 The Chemostat .....	323
9.2 Consumer-Resource Interaction .....	324
9.3 Competition for Substrate in the Chemostat .....	327
9.4 A Chemostat Containing a Food-Chain .....	328
9.5 Infectious Agents and the Art of Averaging .....	331
9.6 Heterogeneity .....	333
9.6.1 Heterogeneity Deriving from Physiological Differences .....	333
9.6.2 Heterogeneity Deriving from Spatial Position .....	334
The gradostat and the creation of niches .....	335
9.7 The Peculiarities of Semelparity .....	335
9.8 Concluding Sermon .....	336
References .....	337

**10 Did Something Change?****Thresholds in Population Models**

<i>Frank Hoppensteadt, Paul Waltman</i> .....	341
10.1 Introduction .....	341
10.2 Mathematical Background on Bifurcations .....	343
10.3 Disease Thresholds .....	347
10.3.1 Kermack-McKendrick .....	347
10.3.2 Schistosomiasis .....	350
10.4 Predator-Prey Systems .....	352
10.4.1 The Basic Model .....	353
10.4.2 Subcritical Bifurcation .....	356
10.4.3 Bifurcation from a Limit Cycle .....	359
10.5 Chaos .....	361
10.5.1 Iterating Reproduction Curves .....	361
10.6 Random Perturbations of Ecological Systems .....	364
10.6.1 Lotka-Volterra Model with Random Perturbations .....	365
10.6.2 The Basic Model with Random Perturbations .....	371
10.7 Summary .....	372
References .....	373

**11 Multiscale Modeling of Materials –  
the Role of Analysis**

<i>Sergio Conti, Antonio DeSimone, Georg Dolzmann, Stefan Müller, Felix Otto</i> .....	375
11.1 Introduction .....	375
11.2 Soft Magnetic Films .....	377
11.2.1 Micromagnetics .....	378
11.2.2 Thin Film Limit .....	380
11.2.3 Numerical Results and Comparison with Experiment .....	383

11.2.4 Discussion .....	385
11.3 Nematic Elastomers .....	386
11.3.1 Microscopic Model .....	387
11.3.2 Quasiconvexification .....	391
11.3.3 Finite-Element Computations .....	396
11.3.4 Attainment Results .....	399
Attainment and non-attainment for Dirichlet boundary conditions. ....	399
Attainment for a Dirichlet-Neumann problem.....	401
11.3.5 Discussion and Perspectives .....	404
References .....	406
<b>Appendix. Color Plates .....</b>	<b>409</b>

Trends in Nonlinear Analysis

Kirkilionis, M.; Krömker, S.; Rannacher, R.; Tomi, F.  
(Eds.)

2003, XV, 419 p., Hardcover

ISBN: 978-3-540-44198-4
