

Contents

1. Introduction: Linear Atomic Chains	1
1.1 A Model Binary Molecule: Two Atoms	1
1.1.1 External Forces	4
1.1.2 Dynamic Motion	6
1.2 The Three Atom Chain	8
1.2.1 External Force on a Trimer	9
1.2.2 Strain in the Trimer	10
1.2.3 Dynamic Motion	10
1.3 An N -mer Molecule: The N Atom Linear Chain	13
1.3.1 Normal Mode Coordinates	17
1.3.2 Phase and Group Velocity	19
1.3.3 Fixed Boundary Conditions	20
1.3.4 Transverse Motion	22
1.4 Linear Chain with Optical Modes	26
1.5 Quantum Mechanics and Thermodynamics of the Linear Chain	29
1.6 Effect of Temperature on the Linear Chain	30
1.6.1 Specific Heat for an N Atom Chain	33
1.6.2 Thermal Expansion	35
1.7 Quantum Operators for Normal Modes	37
1.7.1 Quantum Operators for the Simple Harmonic Oscillator	37
1.7.2 Quantum Operators for the N -Atom Chain	39
Exercises	40
2. Two- and Three-Dimensional Lattices	43
2.1 Crystal Lattices	43
2.2 Two-Dimensional Crystals	44
2.3 Three-Dimensional Crystals	46
2.3.1 Crystal Structures with a Basis	48
2.4 Periodic Functions	49
2.4.1 One-Dimensional Fourier Series	50

2.4.2	Two and Three Dimensional Fourier Series: The Reciprocal Lattice	51
2.4.3	Reciprocal Space Lattices: Some Examples	53
2.5	Bloch's Theorem	54
2.6	Classical Theory of the Lattice	56
2.6.1	Diatomic Interaction Potentials	59
2.6.2	Boundary Conditions in Two and Three Dimensions ..	62
2.6.3	Normal Modes of the Lattice.....	63
2.6.4	Optical Phonons	75
2.7	Normal Mode Hamiltonian	75
2.7.1	Quantum Operators for Normal Modes.....	77
2.8	Connection to the Classical Continuum Theory of Solids.....	79
	Exercises	84
3.	Properties of the Phonon Gas	87
3.1	Specific Heat of the Phonon Gas	87
3.1.1	Primary Thermal Phonon Wavelength	95
3.2	Phonons as Particles: Position, Momentum and Scattering	100
3.2.1	Phonon Momentum and Energy	102
3.3	Phonon Scattering from Point Defects.....	104
3.4	Phonon-Phonon Interactions.....	109
3.4.1	Phonon-Phonon Interactions: Temperature Dependence.....	114
3.4.2	Higher Order Phonon-Phonon Interactions.....	115
3.4.3	Akhiezer Effect	116
3.5	Electron-Phonon Scattering	119
3.5.1	Piezoelectric Interaction	127
3.6	Phonon Thermal Conductivity	131
3.6.1	The Boltzmann Equation.....	133
3.6.2	Quantum of Thermal Conductance	137
3.6.3	Thermal Conductivity in Metals.....	140
	Exercises	143
4.	Stress and Strain	145
4.1	Relative Displacement and Strain.....	145
4.2	Principal Axes of Strain	152
4.3	Superposition	155
4.3.1	Eulerian Definition of Strain	156
4.4	The Stress Tensor	157
4.4.1	Symmetry of the Stress Tensor	162
4.5	Properties of the Stress Tensor	162
4.5.1	Transformations of the Stress Tensor.....	162
4.5.2	Stress on an Arbitrary Surface	164
4.5.3	Principal Axes of Stress	165

4.6	Inhomogeneous Stresses and Arbitrary Shapes	167
4.7	Body Forces	168
4.7.1	Torque Balance in the Presence of Body Forces	170
	Exercises	172
5.	Elasticity Relations	175
5.1	Classes of Elastic Response	175
5.2	Linear Elastic Response	177
5.2.1	Six-Vector Representation of Stress and Strain	178
5.2.2	Elastic Stiffness	179
5.3	Orthotropic and Isotropic Materials.....	179
5.4	Crystalline Materials.....	184
5.5	Strain–Stress Relations.....	187
5.6	Polycrystalline Materials	188
5.7	Conclusion	189
	Exercises	189
6.	Static Deformations of Solids	191
6.1	System of Equations for a Static Deformable Solid	191
6.1.1	Boundary Conditions	193
6.2	Extensional Forces.....	194
6.2.1	Extension of a Beam from End Forces.....	195
6.2.2	Extension of a Beam from a Body Force.....	196
6.3	Flexure of Beams.....	198
6.3.1	Bending by Pure Torque	199
6.3.2	Displacement of the Neutral Axis.....	201
6.3.3	Saint–Venant’s Principle	202
6.4	Euler–Bernoulli Theory of Beams.....	203
6.4.1	Torque and Shear due to Local Forces.....	205
6.4.2	Shear Displacements	208
6.4.3	Boundary Conditions	209
6.4.4	Point Forces	210
6.4.5	Results for Common Bending Problems	210
6.5	Torsional Beam	211
6.5.1	Torsion of Non-Circular Cylinders	214
6.6	Two-Dimensional Problems	215
6.6.1	Plane Strain	215
6.6.2	Plane Stress	217
6.7	Three-Dimensional Problems.....	218
	Exercises	221
7.	Dynamical Behavior of Solids	223
7.1	Simple Vibrational Methods: Torsional Vibrations in Beams ..	223
7.1.1	Longitudinal Vibrations	224
7.1.2	Torsion of Cylinders	229

7.1.3	Stress and Strain in Longitudinal and Torsional Motion	231
7.1.4	Flexural Vibrations	233
7.2	Dynamical Equations of Motion in an Isotropic Solid	240
7.3	Waves in Infinite Isotropic Solids	242
7.3.1	Dilational and Rotational Waves	242
7.3.2	Scalar and Vector Potentials Φ and \mathbf{H}	244
7.3.3	Time-Dependent Body Forces	246
7.4	Waves in Infinite Crystalline Solids	249
7.4.1	Energy Flow and the Poynting Vector in Crystalline Solids	251
7.5	Waves in Semi-infinite Isotropic Solids	254
7.5.1	Waves Incident at Normal Incidence	256
7.5.2	Waves Incident at Arbitrary Angles	257
7.5.3	Rayleigh Waves	261
7.6	Waves in Plates	264
7.6.1	Shear Horizontal Waves in Plates	265
7.6.2	The General Problem of Waves in a Plate	267
7.7	Waves in Rods	271
7.7.1	Torsional Waves	272
7.7.2	Longitudinal Waves	273
7.7.3	Flexural Waves	273
7.8	Summary	274
	Exercises	275
8.	Dissipation and Noise	
	in Mechanical Systems	277
8.1	Langevin Equation	278
8.1.1	Dissipation and Quality Factor	281
8.1.2	Attenuation	282
8.2	Zener's Model of an Anelastic Solid	282
8.2.1	Two-Level Systems	284
8.3	Thermoelastic Relaxation	285
8.4	Phonon–Phonon Interactions	288
8.4.1	Attenuation in Metals	290
8.5	Dissipation in Nanoscale Mechanical Resonators	292
8.5.1	Driven Damped Beams	293
8.5.2	Dissipation-Induced Amplitude Noise	295
8.5.3	Dissipation-Induced Phase Noise	296
8.5.4	Frequency Noise	299
8.5.5	Allan Variance	300
	Exercises	301

9. Experimental Nanostructures	303
9.1 A Simple Fabrication Sequence	303
9.2 Flexural Resonators	305
9.2.1 Radiofrequency Flexural Resonators	305
9.2.2 Nonlinear Resonators	312
9.2.3 Free-Free Resonators	319
9.3 Parametric Resonators: The Mathieu Oscillator	321
9.3.1 Optical Parametric Resonator	329
9.4 Mechanical Electrometer	331
9.5 Thermal Conductance in Nanostructures	334
9.6 Coupling of Electron Transport and Mechanical Motion	336
9.7 Magnetic Resonance Force Microscopy	340
10. Nanostructure Fabrication I	349
10.1 Materials	350
10.2 Lithographic Principles	350
10.2.1 Photolithography	351
10.2.2 Electron Beam Lithography	355
10.2.3 Focused Ion Beams	360
10.2.4 Scanned-Probe Techniques: AFM and STM	361
10.2.5 Imprint Lithography	362
10.2.6 Self-Assembled Monolayers	363
10.3 Dry Etching Techniques	364
10.3.1 Plasma Etching	364
10.3.2 Reactive Ion Etching	365
10.3.3 Reactive Gas Chemistries	367
10.3.4 Silicon and Silicate Reactive Ion Etching	367
10.3.5 GaAs and GaAlAs Reactive Ion Etching	369
10.3.6 RIE Etching of Metals	369
10.3.7 Masking of RIE Etching	369
10.3.8 Ion Beam Etching	370
10.3.9 End-Point Detection	372
10.4 Wet Etching Techniques	373
10.4.1 Silicon Etchants	375
10.5 Thin Film Deposition	379
10.5.1 Evaporation and Sputtering Deposition of Thin Films	379
10.5.2 Chemical Vapor Deposition	382
10.5.3 Silicon Doping	389
10.5.4 Ion Implantation	390
10.6 Tunnel Junction Fabrication: Suspended Resist Mask	391

11. Nanostructure Fabrication II	395
11.1 Bulk Single Crystal Nanomachining	395
11.1.1 Silicon Regrowth Structures	399
11.2 Epitaxial Heterostructure Nanomachining	399
11.2.1 SIMOX and SLICE Wafers	399
11.3 Polycrystalline Nanomachining	402
11.4 GaAs Heterostructure-Based Nanofabrication	404
11.5 Critical Point Drying	405
A. Mathematical Tools	407
A.1 Scalars, Vectors, Tensors	407
A.1.1 Vectors	407
A.1.2 Tensors	410
A.2 Eigenvectors and Eigenvalues	412
A.3 The Dirac Delta Function	414
B. Compatibility Relations for Stress and Strain	417
C. Notation	421
Bibliography	423
Index	431
