PROLOGUE, page 1

SYNOPSIS, page 5

CHAPTER ONE

BASIC KINEMATICS OF THE GEAR SET

Preliminary remarks, 13

Kinematics and the pitch line, 14

On the dichotomy synthesis-v-analysis, 19

Algebraic formulae for the pitch line, 20

On the numbering and significance of these equations, 23

Various graphs telling about the pitch line, 24

On the question of sign, 27

The axodes, 28

The imaginary spline-line teeth of a pair of axodes, 30

Singly-departed naked wheels of the crossed helicals, 32

The twisted surface marked (d) in figure 1.07, 33

Some aspects to be remembered of figure 1.07, 34

Special cases among the radii occurring at P, D and O, 34

Ordinary planar spur and the parallel helical gears, 36

The various kinds of bevel gears, 37

A first look at the question of offset, 37

Conclusion, 40

CHAPTER TWO

THE FUNDAMENTAL LAW OF GEARING

Introduction, 41

The fundamental law, 41

Involute gears, 43

Prognoses, 44

Some assumptions and two disclaimers, 44

An equivalent linkage, 45

- Enumerative geometry, 47
- In screw theory the fundamental law manifests itself, 48
- Proofs of the law by means of the vector algebra, 50
- On what there is to follow, 52
- On the non-involute hypoids, 52
- Design in the absence of the fundamental law, 53
- Sketchy account of the (non-involute) hypoid literature, 54
- The manufacture of hypoid gearing, 55
- Some eclectic theoretical works, 56
- Survey of the general spatial involute literature, 57
- Other laws, 58
- Some observations in respect of all gears, 58
- Robert Willis 1838, 61

CHAPTER THREE

MATING INVOLUTE HELICOIDS

- Introduction, 63
- Circular hyperboloids proliferate, 64
- A straight path for the point of contact, 65
- Two ruled surfaces intersecting perpendicularly, 66
- Imagined milling of the involute tooth profile, 71
- The core helix and the twisted line of intersection, 71
- The involute helicoid and its whole slip track, 72
- The whole geometric construct, 74
- Brief look at a special (the planar) case, 75
- The triad of lines mutually perpendicular at B, 75
- The angles ζ and σ and the curvature at B, 75
- A mating pair of non-alike involute helicoids, 77
- The unimportance of errors upon assembly, 80
- Two cut gear-bodies put anyhow into contact, 81
- On the kinematic equivalences, 84
- The G-circles intersecting at Q, 84
- Circles intersecting in general, 85
- The triad of planes at a general Q, 85
- Gyratory motion of the triad at Q, 89
- Location here of the pitch line, 89
- Another triad of lines in and about the polar plane, 90
- More about the variable angle δ_{REMOTE} , 91
- Special points [Qp], [Qm] and [Qc] in the path of Q, 91
- Practical limits to the otherwise endless motion, 92
- Degenerate slip track geometry at the two ends of Z , 93
- The slip tracks unsupported, 97
- Theodore Olivier 1842, 98

Intersection of the base hyperboloids, 98
 Penultimate remarks, 101
 Raoul Bricard, 102
 Appendix A at chapter 3, 102
 Appendix B at chapter 3, 103
 Appendix C at chapter 3, 104
 Appendix D at chapter 3, 104
 Appendix E at chapter 3, 105

CHAPTER FOUR

KEY ASPECTS OF THE GEOMETRY

Introduction, 107
 The hyperboloid and its generators, 108
 Theorems about generator-joined hyperboloids, 109
 Theorem #1, about circular hyperboloidal axodes, 111
 Theorem #2, about the points $[\Gamma m]$, 113
 Intersecting circles, 115
 Theorem #3 part one, about the points $[\Gamma t]$, 115
 Theorem #3 part two, about the point $[\Gamma d]$, 117
 An isolated note looking in retrospect, 118
 An isolated note looking ahead, 118
 Definition of $[Qf]$, 119
 Looking now at the figures 4.04, 119
 Looking next at figure 4.04(d), 122
 Specifically in the case of gearing, 123
 The central fortuitous fact now apparent, 125
 Legitimate paths, 126
 On the distribution of $[Qm]$, 127
 Kinematics at $[Qm]$, 129
 Statics at $[Qm]$, 130
 Strain energy at $[Qm]$, 132
 Another look at the gear bodies of figure 3.10, 132
 The moving transversal, the FAXL, and the F-surface, 134
 Variation of δ -remote with the distance of Q from $[Qf]$, 134
 The point $[Qs]$ occurring at the line of striction, 135
 Position of $[Qs]$ in the special case of equiangularity, 137
 More about the gyratory motion of the triad at Q, 138
 The two planes that continuously define j-Q-k, 140
 Mechanical significance of $[Qf]$, 140
 From the path of Q in 1 to the slip tracks by inversion, 143
 The two paths of the two Q, 144
 Coaxiality of the circular hyperboloids, 145
 The parabolic hyperboloid, 146

Four different rectilinear parabolic hyperboloids, 148
Appendix A at chapter 4, 149
Appendix B at chapter 4, 158

CHAPTER FIVE (A) THE SIMPLICITY OF EQUIANGULARITY

Transition comment, 159
Prognosis, 159
Synopsis of the chapters 5, 160
The common objectives of the chapters 5B and 6, 160
Two important theorems that need to be studied, 161
Aspects of the pitch helices not well studied as yet, 161
Problems concerning our choice for the travel paths, 162
Radial offset R and the FAXL, 164
The fortuitous aspects of an equiangular architecture, 166
A selected few of the algebraic formulae, 171
Two special values of R , 172
The special case when C is at P , 173
An interim mention of the polyangular, 173
Last remarks and a transition comment, 173
Appendix A at chapter 5A, 174
Appendix B at chapter 5A, 176

CHAPTER FIVE (B) SYNTHESISING AN EQUIANGULAR SET

Introduction, 177
Naked wheels, 177
The angles τ , κ and λ at the naked wheel, 178
Rolling, rocking and boring, 181
Watershed, 182
Beginning of worked example #1 (part 1), 182
More on the lengths Z_i and related questions, 193
On the angles α and the shapes of the slip tracks, 196
Danger-locations for excessive wear, 198
Adverse circumstances at the crossed helicals, 199
On the sets of wheels combined at figure 5B.06, 200
Beginning of part 2 of worked example #1, 200
Unwrapping the roll of paper, 204
WkEx#1(2) continued, 206
On the results of this synthesis, 207
The phantom rack, 209
The anatomy of a tooth, 212
The very small angles χ at the crossed helicals, 212

On the plane of the E-radii and the radiplan view, 214
 The ellipses of obliquity, 218
 Beginning of worked example #2, 220
 Mutual decapitation versus continuity of action, 227
 Transition comment, 228
 The special sets with Σ zero, 229
 The special sets with R zero, 230
 The special sets with C zero, 230
 The so-called straight bevels of ordinary practice, 231
 More transition comment, 232
 Load bearing and lubrication, 233
 Conclusion, 233
 Appendix A at chapter 5B, 234
 Appendix B at chapter 5B, 236

CHAPTER SIX THE PLAIN POLYANGULAR OPTION

Recapitulation, 237
 Introduction to polyangularity, 237
 Timely exclusion of an as yet unwanted difficulty, 238
 On getting ready to begin, 238
 On what happens in the G-space, 239
 The plain polyangular and the exotic, 240
 Important aspects of the equilateral transversal, 240
 An important observation, 243
 The figures 6.02, 243
 The figure 6.03, 246
 Circular cylinder of radius R coaxial with the CDL, 247
 Some more-incisive remarks about the F-surface, 249
 Location of [Qf], 250
 Finally some definitive remarks about the elusive [Qm], 250
 Two special plain polyangulares, 251
 Again the plain and the exotic, 252
 More about axodes and the naked wheels, 252
 Geometric relations within the linear array, 254
 The velocity vector at F, 255
 The parabolic hyperboloid of the rectilinear array, 256
 Need for a dedicated algebra, 256
 An algebra for the plain polyangular architecture, 257
 Law of the speed ratio $k = [a_3 \cos \alpha_3] / [a_2 \cos \alpha_2]$, 260
 Beginning of worked example #3, 261
 Numerical check on the law of the speed ratio, 270
 Putting one of the paths upon the transversal, 270

Beginning of worked example #4, 271
Some ongoing comments in conclusion, 278
Appendix A at chapter 6, 279
Appendix B at chapter 6, 282
Appendix C at chapter 6, 283

CHAPTER SEVEN

WORM DRIVES OFFSET AND NON-OFFSET

Introduction, 285
Recapitulation, 286
Beginning of worked example #5, 287
Looking more generally now at the plane of adjacency, 292
The radial planar section through the flank of a tooth, 294
Beam's axvolute, 294
Visual recognition of properly cut involute worms, 296
Beginning of worked example #6, 297
Load bearing and the small angles χ in worm drives, 307
Appendix A at chapter 7, 308

CHAPTER EIGHT

EXOTICISM BY ACCIDENT OR DESIGN

Preliminary remarks, 311
Overview of exoticism, 311
Analysis of the Merritt figure, 313
The wholly-completed F-surface, 318
Forehanded and backhanded design, 319
Non-intersecting paths, 319
The wider generality of exoticism, 322
On the difficulties surrounding truncation, 322

CHAPTER NINE (A)

HELICALITY TIGHT MESH AND BACKLASH

Screw symmetry at the flanks of teeth, 323
On the misnomer, 325
The fronts and the backs, 326
Thick teeth, 326
Conical blanks, 327
Drive and coast, 327
The fixity of the paths, 328
Axial withdrawal from tight mesh, 328
Shifting of the slip tracks, 329
On mobility, 330

Relative re-location at the axes of the wheels, 331
The flush configuration, 333
Axial adjustment for location, 333
Axial adjustment for backlash, 334
A general observation, 334

CHAPTER NINE (B) MECHANICS OF THE PHANTOM RACK

Introduction, 335
First look at a puzzling matter, 335
Second look at the same matter, 338
Axodes in general and the ideas of Reuleaux, 339
Another theorem, 340
On deeper consideration, 346
Concluding remarks, 347

CHAPTER TEN MATHEMATICS OF THE MACHINING

Recapitulation, 349
Some early hints about milling and hobbing, 350
The rack triad, 351
On the nagging question of the 'conicality' of teeth, 351
More on the shapes of teeth, 354
The swivel angle λ , 354
The angles κ and λ taken together, 355
Incidentally some interesting interrelated formulae, 355
Two other important angles, γ and θ , 356
Matters to do with δ and γ , 357
The real rack, 358
Length-measured pitches of teeth, 360
The flat-action phenomenon, 364
First algebraic look at γ in terms of δ , 366
Second algebraic look at γ in terms of δ , 370
An incidental second look at α also, 371
An already established fact not to be overlooked, 372
The helix angles θ at the opposite profiles of a tooth, 372
The various triads, 375
The helix angles in Beveloid gearing, 375
Aspects of the motion of the real rack cutter, 376
Some misconceptions that must be rejected, 379
Rack velocity, 380
The analogous oblique-rolling vehicular wheel, 381
How the rack moves to cut the teeth of a wheel, 382

- A mating pair of naked wheels and its phantom rack, 383
- Finding precisely the location and pitch of ISA_{24} , 386
- Finding precisely the location and pitch of ISA_{34} , 387
- Some well known but misleading phenomena, 387
- The angles ι , 389
- The cylindroid at the meshing, 390
- The other, as yet unmentioned cylindroids, 393
- Cutting velocity across the flanks of the rack, 393
- A confirmation by means of inversion, 395
- Application here of the theorems at chapter 9B, 397
- Speeds and feeds at the machine tool, 401
- Overall strategy of the found mathematics, 402
- Appendix A at chapter 10, 404

CHAPTER 11

ASPECTS OF THE PHYSICAL REALITY

- Contents, 407
- Interference at teeth and among teeth, 407
- Kinetostatic evaluation of the result at WkEx#2, 412
- Commenting more widely now but inconclusively, 416
- Ideas about the envelope, 416
- A worked example previously tried but discontinued, 417
- The slip track locations matrix, 426
- The closed envelope of kinematic possibilities, 427
- An exercise for the reader, 430
- Early confirmation with a first prototype, 430
- Appendix A at chapter 11, 430

CHAPTER 12

THE SCREW SYSTEMS AND GEAR DESIGN

- Explanation, 435
- Introduction, 435
- Intersecting screw systems inhabiting the gear set, 436
- The overall design strategy seen now in retrospect, 439

TABLE OF NUMERICAL RESULTS
