

# Contents

<b>1 Introduction</b> .....	1
<i>Ulrich Hammel, Boris Naujoks, Hans-Paul Schwefel</i>	
1.1 Computational Intelligence Methods .....	1
1.2 Parallel Problem Solving from Nature .....	3
1.3 On the Development of Computational Intelligence .....	3
1.4 State of the Art and Trends in Computational Intelligence .....	5
1.5 Goals of the Collaborative Research Center .....	6
1.6 On the Organization of the Chapters of This Book .....	8
<hr/>	
<b>Part I. Fuzzy Logic</b>	
<hr/>	
<b>2 Mathematical Foundations of Fuzzy Inference</b> .....	15
<i>Stephan Lehmke, Bernd Reusch, Karl-Heinz Temme, Helmut Thiele</i>	
2.1 Introduction .....	15
2.2 Structure of Fuzzy Inference Mechanisms .....	16
2.3 Interpretation of Fuzzy IF-THEN Rule Bases Using Concepts of Functional Analysis .....	18
2.4 The Generalized Modus Ponens and the Compositional Rule of Inference .....	20
2.5 Constructing Solutions for Fuzzy IF-THEN Rule Bases .....	22
2.6 Uniqueness of Solutions for Fuzzy IF-THEN Rule Bases .....	28
2.7 Functional Analytic Properties of Fuzzy Inference Operators .....	29
2.8 Approximate Reasoning with Context-Dependent Fuzzy Sets .....	30
2.9 Approximate Reasoning Under Uncertainty .....	33
2.10 Axiomatic Characterization of Fuzzy Approximation Operators ..	34
2.11 Algebraic Foundations of Information Granulation .....	36
2.12 Algebraic Foundations of Modeling with Words .....	37
2.13 Conclusions and Further Research .....	37
<b>3 Data-Based Fuzzy Modeling for Complex Applications</b> ....	46
<i>Harro Kiendl, Peter Krause, Daniel Schauten, Timo Slawinski</i>	
3.1 Introduction .....	46
3.2 Efficient Rule Generation in High-dimensional Search Spaces .....	48
3.3 Interpretable Fuzzy Models with High Accuracy .....	58

3.4	Applications .....	67
3.5	Concluding Remarks .....	72
<b>4</b>	<b>Fuzzy Modeling to Cope with Ambiguities .....</b>	<b>78</b>
	<i>Harro Kiendl, Peter Krause, Daniel Schauten, Timo Slawinski</i>	
4.1	Introduction .....	78
4.2	Rating and Reduction of Ambiguities .....	80
4.3	Reduction of Ambiguities by Negative Rules .....	83
4.4	Resolution of Ambiguities by Defuzzification .....	87
4.5	Ambiguity-Based Predesign .....	92
4.6	Implicit Modeling .....	95

---

## Part II. Evolutionary Algorithms

---

<b>5</b>	<b>Theory of Evolutionary Algorithms and Genetic Programming .....</b>	<b>107</b>
	<i>Stefan Droste, Thomas Jansen, Günter Rudolph, Hans-Paul Schwefel, Karsten Tinnefeld, Ingo Wegener</i>	
5.1	Introduction .....	107
5.2	A Contribution to the NFL Debate .....	109
5.3	On the Analysis of Simple Evolutionary Algorithms .....	111
5.4	Multiobjective Evolutionary Algorithms .....	116
5.5	Populations and Crossover .....	119
5.6	Takeover Times and Related Key Measures .....	123
5.7	Dynamization and Adaptation .....	126
5.8	Metric-Based EA (MBEA) and an Application in GP .....	130
5.9	Black-box Optimization .....	134
<b>6</b>	<b>Design of Evolutionary Algorithms and Applications in Surface Reconstruction .....</b>	<b>145</b>
	<i>Thomas Beielstein, Jörn Mehnen, Lutz Schönemann, Hans-Paul Schwefel, Tobias Surmann, Klaus Weinert, Dirk Wismann</i>	
6.1	Introduction .....	145
6.2	Design of Evolutionary Algorithms .....	146
6.3	Evolutionary Algorithms: The General Framework .....	146
6.4	Design of Evolutionary Algorithms and Integration of Domain Knowledge .....	147
6.5	Structure Optimization and Evolutionary Programming .....	155
6.6	An Analysis of Threshold Selection in Noisy Environments .....	161
6.7	Evolutionary Surface Reconstruction .....	165
6.8	Scanning Techniques .....	167
6.9	Point Selection Schemes .....	168
6.10	Surface Reconstruction Using Triangulations .....	172

6.11 Surface Reconstruction Using Nonuniform Rational B-Splines . . . .	178
6.12 A Parallel Reconstruction System Using CSG-NURBS Hybrids . . .	182
6.13 Parallel Evolution Strategies . . . . .	185
6.14 Conclusions . . . . .	187

## 7 Genetic Programming and Its Application in Machining

<b>Technology</b> . . . . .	194
<i>Wolfgang Banzhaf, Markus Brameier, Marc Stautner, Klaus Weinert</i>	
7.1 Introduction . . . . .	194
7.2 Linear Genetic Programming . . . . .	195
7.3 Removal of Non-effective Code . . . . .	197
7.4 Graph Interpretation . . . . .	199
7.5 Linear Genetic Operators . . . . .	201
7.6 Control of Variation Step Size . . . . .	207
7.7 Control of Structural Diversity . . . . .	212
7.8 Genetic Programming in Machining Technology . . . . .	218
7.9 Experimental Setup . . . . .	219
7.10 Gathering Data . . . . .	221
7.11 Tree-Based GP for Symbolic Regression . . . . .	224
7.12 Graphical Representation . . . . .	229
7.13 Results of the GP Kernel . . . . .	231
7.14 Parallelization . . . . .	235
7.15 Conclusion . . . . .	237

---

## Part III. Machine Learning and Optimization

---

<b>8 Novel Learning Tasks, Optimization, and Their Application</b> . . . . .	245
<i>Guido Daniel, Jan Dienstuhl, Sebastian Engell, Sven Felske, Karl Goser, Ralf Klinkenberg, Katharina Morik, Oliver Ritthoff, Henner Schmidt-Traub</i>	
8.1 Novel Learning Tasks in Machine Learning . . . . .	246
8.2 Parameter Estimation for Chromatographic Processes . . . . .	278
8.3 Classification and Prediction of Device Parameters with Regard to the Quality of Integrated Microelectronic Systems . . . . .	294
<b>Index</b> . . . . .	319

Advances in Computational Intelligence

Theory and Practice

Schwefel, H.-P.; Wegener, I.; Weinert, K.D. (Eds.)

2003, X, 326 p., Hardcover

ISBN: 978-3-540-43269-2
