

Table of Contents

I	INTERFACE DYNAMICS: Phenomenology and Modelling	
	Melting Kinetics of Prolate Spheroidal Crystals	3
	<i>M.E. Glicksman, A. Lupulescu, M.B. Koss</i>	
1	Introduction	3
1.1	Dendritic Growth	3
1.2	Isothermal Dendritic Growth Experiment (IDGE)	3
1.3	Mushy Zones	4
2	Video Melting Data	4
3	Data Analysis	5
3.1	Image Processing	5
4	Quasi-static Theory	6
4.1	Background	6
4.2	Potential Theoretic Formulation	6
4.3	Enthalpy Flux	9
4.4	Enthalpy Current	11
4.5	Kinematic Formulation	11
5	Results	13
5.1	Experimental Melting Rates	13
5.2	Thermal Data	15
6	Conclusions	17
7	Acknowledgements	17
	Deterministic Behaviour in Sidebranching Development	20
	<i>Ricard González-Cinca, Yves Couder</i>	
1	Introduction	20
2	Experimental Results	20
3	Model	22
4	Numerical Procedure and Results	23
	Growth Dynamics during Solidification of Undercooled Melts	26
	<i>Dieter Herlach</i>	
1	Introduction	26
2	Experimental	27
3	Description of Dendrite Growth in Undercooled Melts	29
4	Experimental Results on Dendrite Growth in Undercooled Melts	32
4.1	Pure Metals	32
4.2	Solid Solutions	34
4.3	Dilute Multiphase Alloys	35
4.4	Intermetallics with Superlattice Structures	37
4.5	Complex Structures of Polytetrahedral Phases	39

VIII Table of Contents

4.6	Faceted and Non-Faceted Growth of Semiconductors	41
5	Summary and Conclusions	44
	Thermodynamics of Diffuse Interfaces	47
	<i>G.J.Schmitz</i>	
1	Introduction	47
2	General Considerations	49
3	Thermodynamic Approaches to Interfacial Energy	50
4	Crystal Growth Models	50
5	Approaches from Theories of Phase Transitions	55
6	Statistical Approach	57
7	Conclusions	61
8	Acknowledgments	63
	Computer Investigation of the Influence of the Internal Structure Topology on the Percolation Process in Two- and Three-Dimensional Inhomogeneous Systems	65
	<i>Aliaksei Konash, Sergey Bagnich</i>	
1	Introduction	65
2	Computational Technique	66
3	Results and Discussion	67
4	Conclusion	73
	Electron Transport of Nanoperm Alloys	75
	<i>K. Pekala</i>	
1	Introduction	75
2	Experiments	75
3	Results and Discussion	76
	3.1 Electrical Resistivity	76
	3.2 Crystalline Fraction	77
	3.3 Thermoelectric Power	79
4	Conclusion	79
	Self-Organized Formation of Fractal and Regular Pores in Semiconductors	82
	<i>Jens Christian Claussen, Jürgen Carstensen, Marc Christophersen, Sergiu Langa, Helmut Föll (University of Kiel)</i>	
1	Electrochemical Etching: Basic Experimental Setup	82
2	The Current-Burst Model	83
3	Consequences on Pore Geometries	84
4	Conclusions	87
	Evolution and Shapes of Dunes	88
	<i>Hans J. Herrmann, Gerd Sauermann</i>	
1	Introduction	88
2	Experimental Measurements of a Barchan Dune	89
	2.1 Dune Morphology	89

2.2	Wind Velocity and Sand Flux	92
3	The Model	94
3.1	The Wind Shear Stress	95
3.2	The Sand Flux	97
3.3	The Surface Evolution	98
4	The Shape of the Dune and Outlook	100
	Morphogenesis of Growing Amorphous Films	103
	<i>Stefan J. Linz, Martin Raible, Peter Hänggi</i>	
1	Introduction	103
2	Basic Concepts	104
3	Deposition Equation for Thin Film Growth	109
4	Conclusions and Perspectives	117

II INTERFACE DYNAMICS: Modelling and Simulation

	Density Effects and Fluid Flow in Phase-field Models	121
	<i>Massimo Conti</i>	
1	Introduction	121
2	Phase-field Model for a Pure Material	123
2.1	The Entropy Balance	123
2.2	The Thermodynamic Potential	125
2.3	Nondimensional Equations in one Dimension	126
3	Phase-field Model for a Binary Alloy	127
4	Numerical Solutions	130
4.1	Pure Substance	130
4.2	Binary Alloy	133
5	Conclusions	134
	A Lattice Boltzmann Method for the Mesoscopic Calculation of Anisotropic Crystal Growth	136
	<i>Wolfram Miller and Igor Rasin</i>	
1	Introduction	136
2	Lattice Phase-field Model	136
3	Results	138
4	Conclusions	140
	A Phase-field Model for the Solidification Process in Multicomponent Alloys	142
	<i>H. Garcke, B. Nestler, B. Stinner</i>	
1	Solidification Effects and Length Scales	142
2	Description of the Model	143
3	The Related Sharp Interface Model	145
4	Examples	147
5	Further Generalizations	148

Planar Solidification from Undercooled Melt: An Approximation of a Dilute Binary Alloy for a Phase-field Model	150
<i>Denis Danilov</i>	
1 Introduction	150
2 The Model	151
3 An Approximation of a Small Impurity Concentration	152
4 Stationary Interface	154
5 Large-Velocity Asymptotics	154
6 Numerical Calculations	155
7 Conclusions	158
Initial Transients in the Symmetric Model for Directional Solidification	160
<i>Raúl Benítez, Laureano Ramírez-Piscina</i>	
1 Introduction	160
2 The Sharp Interface Model	160
3 The Phase-field Model	162
4 Results and Discussion	163
5 Concluding Remarks	164
Dynamics of a Faceted Nematic-Smectic B Front in Thin-Sample Directional Solidification	166
<i>Tamás Börzsönyi, Silvere Akamatsu, Gabriel Faivre</i>	
1 Introduction	166
2 Results	167
2.1 Experiments	167
2.2 Linear Stability Analysis	168
2.3 Phase-field Simulations	169
Last Stage Solidification of Alloys: A Theoretical Study of Dendrite Arm and Grain Coalescence	172
<i>M. Rappaz, A. Jacot and W. J. Boettinger</i>	
1 Introduction and Theoretical Aspects	172
2 Results and Discussion	175
3 Conclusion	179
4 Acknowledgements	180
Phase-field Modeling of Eutectic Solidification: From Oscillations to Invasion	182
<i>Roger Folch, Mathis Plapp</i>	
1 Introduction	182
2 Model	183
3 Simulations	185
4 Conclusion	188

Phase-field Theory of Nucleation and Growth in Binary Alloys	190
<i>László Gránásy, Tamás Börzsönyi*, Tamás Pusztai</i>	
1 Introduction: Diffuse Interface and Nucleation	190
2 Phase-field Theory of Nucleation	191
2.1 Nucleation in 3D	191
2.2 Multi Particle Solidification in 2D	192
3 Results and Discussion	193
Modelling of Phase Transformations in Titanium Alloys with a Phase-field Model	196
<i>Benoît Appolaire, Elisabeth Gautier</i>	
1 Introduction	196
2 Which Model to Choose?	197
3 Can we Rely on the Model to Get Quantitative Predictions?	198
Spreading of Liquid Monolayers: From Kinetic Monte Carlo Simulations to Continuum Limit	202
<i>M. N. Popescu, S. Dietrich</i>	
1 Introduction	202
2 Model and KMC Simulations	202
3 Results and Discussion	204
4 Patterned Substrates	206
5 Summary and Conclusions	207
A Multi-mesh Finite Element Method for Phase-field Simulations	208
<i>Alfred Schmidt</i>	
1 Models for Solidification	208
1.1 Sharp Interface Models	209
1.2 Diffuse Interface Models	209
2 Adaptive Finite Element Methods for Coupled Systems of PDE	211
2.1 Aspects of Implementation	212
2.2 Numerical Analysis and Adaptive Methods	212
3 Adaptive Method for Phase-field Models	213
Transport of Point Defects in Growing Si Crystals	218
<i>Axel Voigt, Christian Weichmann</i>	
1 Introduction	218
2 Point defect modeling	219
3 Finite element discretisation	222
4 Results	223
5 Conclusions	224
6 Acknowledgment	225

XII Table of Contents

Atomistic Simulation of Transport Phenomena in Simple and Complex Fluids and Fluid Mixtures	226
<i>Kurt Binder, Jürgen Horbach, Walter Kob, Fathollah Varnik</i>	
1 Introduction	226
2 Interdiffusion and Selfdiffusion in Binary Mixtures (A,B)	227
3 Estimation of Selfdiffusion Coefficients in Various Models of Fluids .	233
4 Estimation of the Shear Viscosity	240
5 Thermal Conductivity	244
6 Concluding Remarks	245
Unusual Viscosity Feature in Spinodal Decomposition Under Shear Flow	249
<i>Jian Wang^{†,‡}, Wolfram Gronski[‡], Christian Friedrich[‡], Peter Galenko[†] and Dieter Herlach[†]</i>	
1 Introduction	249
2 Theory	250
3 Simulation Detail	251
4 Conclusion	253
Micro-macro Approach to Cluster Formation in Granular Media	255
<i>S. Luding</i>	
1 Introduction	255
2 Models for Multi-particle Simulations	256
2.1 The Event-driven, Rigid Particle Method	256
2.2 The Time Driven, Soft Particle Technique	257
2.3 The Connection Between Hard- and Soft-sphere Models	258
3 Freely Cooling Granular Media	258
3.1 Homogeneous and Inhomogeneous Cooling	260
3.2 Cluster Structure	261
3.3 Cluster Growth	261
3.4 Micro-macro Transition	263
4 Summary and Conclusion	265
<hr/>	
III TRANSPORT	
<hr/>	
Urban Transport Phenomena in the Street Canyon	269
<i>Maciej M. Duras</i>	
1 The Field Models of Vehicles and Pollutants	269
2 The Governing Equations	270
3 Optimal Control Problems	272
4 Conclusions	273
5 Acknowledgements	273

Walker Behaviour Modelling by Differential Games	275
<i>Serge P. Hoogendoorn</i>	
1 Introduction	275
2 Pedestrian Behaviour Framework	276
3 Theory of Walking	278
4 Conceptual Pedestrian Walking Task Model	280
4.1 Walking Subtask Hierarchy	280
4.2 Walking as a Feedback-oriented Control System	281
4.3 Pedestrian Kinematics (Internal Model)	283
4.4 Walking Discomfort (Resistance)	284
4.5 Cost Components	285
4.6 Cost L_1 due to Deviation from Planned Route	285
4.7 Proximity Cost L_2	285
4.8 Acceleration and Deceleration Cost L_3	286
5 Derivation of Walker Model	286
5.1 Application of the Maximum Principle	286
5.2 Cooperative Walker Model	289
5.3 Relation to the Social-forces Model	290
5.4 Model Refinements	290
6 Approach to Model Calibration	291
7 Application Results	292
8 Conclusions and Future Research Directions	293
Investigations of Vibrations in the Complex Dynamical Systems of Transmission Pipelines	295
<i>Elena Mul, Vladimir Kravchenko</i>	
1 Introduction	295
2 Model	296
3 Method	296
4 Discussion of Results and Conclusions	300
Information in Intelligent Transportation System	301
<i>J. Wahle, M. Schreckenberg</i>	
1 Introduction	301
2 Two-route scenario	302
2.1 Simulation technique	304
3 Floating-Car Data	305
3.1 Influence of the dynamic drivers	307
3.2 Influence of the static drivers	309
4 Different criteria	310
4.1 Gradient of travel time	310
4.2 Global density and speed	311
4.3 Comparison	313
5 Summary and conclusion	314

Experiments on Route Choice Behaviour	317
<i>Reinhard Selten, Michael Schreckenberg, Thomas Pitz, Thorsten Chmura, Joachim Wahle</i>	
1 Introduction	317
2 Experimental Setup	318
3 Equilibrium Predictions and Observed Behaviour	318
4 Response Mode	319
5 Payoffs and Road Changes	320
6 Conclusion	320
Transport Out of a Gravitationally Stable Layer with the Help of a Faster Diffusing Substance: PDE Simulations and Scaling Laws	322
<i>Karsten Koetter, Malte Schmick, Mario Markus</i>	
1 Introduction	322
2 Analytical Estimates	323
3 Experiments	324
4 PDE Simulations	325
5 Conclusion	326
Microscopic Parameters and Macroscopic Features of Traffic Flow	329
<i>Peter Berg, Eddie Wilson</i>	
1 Microscopic Parameters of Traffic Flow	329
2 Stochastic and Deterministic Microscopic Description	330
2.1 A Cellular Automata Model	330
2.2 Car-following Models	331
3 Optimal-velocity Car-following Models	331
4 Derivation of Macroscopic Counterparts	332
5 Similarity of Flow Patterns	334
6 More Realistic Models	335
6.1 Multi-species Traffic; Temporal and Spatial Variations of Driver Behaviour	337
6.2 Reaction Time	339
6.3 Multiple Look-ahead Models	339
6.4 Multi-lane Flow	340
7 Synchronised Flow	341
8 Outlook	341
An Adaptive Smoothing Method for Traffic State Identification from Incomplete Information	343
<i>Martin Treiber, Dirk Helbing</i>	
1 Introduction	343
2 Description of the Method	344
3 Application to German Freeways	350
4 Summary and Outlook	357

Probabilistic Description of Nucleation in Vapours and on Roads	361
<i>Reinhard Mahnke</i>	
1 Introduction	361
2 Stochastic Master Equation Approach	363
3 Nucleation in Supersaturated Vapours	368
4 Car Cluster Formation on Roads	376
5 An Advanced Model of Car Cluster Formation	382
6 Conclusion	385
7 Appendix: Derivation of Thermodynamic Potential and Corresponding Transition Rate	385
Cellular Automata Simulation of Collective Phenomena in Pedestrian Dynamics	390
<i>Andreas Schadschneider, Ansgar Kirchner, Katsuhiro Nishinari</i>	
1 Introduction	390
1.1 Collective Effects	390
1.2 Modelling Approaches	392
2 Basic Principles of the Model	393
3 Definition of the Model	395
4 Collective Phenomena	397
5 Influence of the Floor Fields	399
6 Friction Effects	401
7 Conclusions	403
Modeling, Simulation and Observations for Freeway Traffic and Pedestrian	406
<i>Yuki Sugiyama, Akihiro Nakayama</i>	
1 Introduction	406
2 Brief Review of OV Model (Traffic in Circuit)	406
3 Observations in the Bottleneck	408
4 OV Model with a Bottleneck	410
4.1 Modelling and Simulation	410
4.2 The Structure of Flow Upstream of Bottleneck	412
4.3 Summary and Conjecture	417
5 Modeling Pedestrians in 2-dimensional OV Models	418
Testing Traffic Flow Models	422
<i>Elmar Brockfeld, Peter Wagner</i>	
1 So Much Models, so Little Time	422
2 Theory	422
3 Testing Dynamical Models	423
4 The Trouble with the Data	426
5 Daganzo's Data	426
6 The Contest	427
6.1 Building a Reference Model	427
6.2 Technicalities	428

XVI Table of Contents

6.3	The Rest of the Pack	429
6.4	Finally, the Rest (Preliminary Results!!!)	430
7	Conclusions & Further Plans	431

Interface and Transport Dynamics

Computational Modelling

Emmerich, H.; Nestler, B.; Schreckenberg, M. (Eds.)

2003, XVI, 437 p., Hardcover

ISBN: 978-3-540-40367-8
