I. Threats to Plant Population Viability

1	Why Plant Population Viability Assessment?	3
	M.W. SCHWARTZ and C.A. BRIGHAM	
1.1	Introduction	3
1.1.1	Book Structure	4
1.2	Why Plants Differ	6
1.3	Life Histories of Plants	8
1.4	Conclusion: Conservation Challenges for Plants	11
	References	13
2	Threats to Rare Plant Persistence	17
	J.G.B. OOSTERMEIJER	
2.1	Introduction	17
2.2	Delineating Different Types of Threats	18
2.2.1	Environmental Threats	19
2.2.1.1	Climate Change	19
2.2.1.2	Habitat Fragmentation and Degradation	22
2.2.1.3	Direct Destruction and Overexploitation of Populations	23
2.2.2	Disturbed Biotic Interactions	24
2.2.2.1	Pollen Limitation	24
2.2.2.2	Dispersal Limitation	24
2.2.2.3	Interactions with Exotic Species	25
2.2.2.4	Climate Change	26
2.2.2.5	Grazing and Trampling	26
2.2.3	Genetic Threats	27
2.2.3.1	Drift and Inbreeding	27
2.2.3.2	Inbreeding Effects	28
2.2.3.3	Loss of S-alleles	28
2.2.3.4	Reduced Adaptability	29

2.2.3.5	Genetic Variation in Endemic Plants	29
2.3	Managing Different Types of Threats	30
2.3.1	Managing Threats to Endemic Species	30
2.3.2	Managing Environmental Threats	32
2.3.2.1	Climate Change	32
2.3.2.2	Habitat Fragmentation	32
2.3.2.3	Edge Effects	34
2.3.2.4	Habitat Degradation	35
2.3.3	Managing Disturbed Biotic Interactions	36
2.3.3.1	Managing Mutualistic Interactions	36
2.3.3.2	Managing Herbivores and Pathogens	37
2.3.3.3	Managing Exotic Plant Species	38
2.3.4	Managing Genetic Threats	40
2.3.4.1	Managing Hybridization and Introgression	40
2.3.4.2	Managing Risks of Drift, Inbreeding and Outbreeding . . .	40
2.4	Dealing with Threats in Plant PVAs	43
2.5	Conclusions	45
	References	46

**Factors Affecting Persistence in Formerly Common
and Historically Rare Plants**63

C.A. BRIGHAM

3.1	Introduction	63
3.1.1	General Background	63
3.1.2	Selection of Factors	65
3.1.3	Types of Rarity in Plants	65
3.2	Reductions in Genetic Diversity	66
3.2.1	Is There a Positive Correlation Between Genetic Diversity and Population Size in Plants?	67
3.2.2	Do Rare Plant Species Show Reduced Genetic Diversity in Comparison to More Common Congeners? . . .	71
3.2.3	Is There Evidence for a Positive Correlation Between Reduced Genetic Diversity and Reduced Fitness in Plants? .	73
3.2.4	Do Historically Rare and Formerly Common Species Show Similar Patterns of Correlations Between Population Size and Genetic Diversity?	76
3.2.5	Implications for PVAs	78
3.3	Competition	79
3.3.1	Is There Evidence for Competition with Native Species as a Cause of Rarity in Plants?	80
3.3.2	What Is the Role of Exotic Species in Plant Declines?	83

3.3.3	Competition in Historically Rare and Formerly Common Species	84
3.3.4	Implications for PVA	85
3.4	Loss of Pollinators at Low Abundance	86
3.4.1	Are Rare Plants in General Pollinator-Limited?	86
3.4.2	How Might We Expect Plant-Pollinator Relationships to Differ for Historically Rare and Formerly Common Species?	88
3.4.3	Implications for PVA	89
3.5	Herbivory and Seed Predation	90
3.5.1	Review of the Evidence for Effects of Herbivory and Seed Predation on Rare Plants	90
3.5.2	Historically Rare vs. Formerly Common Species: Expectations	91
3.5.3	Implications for PVA	94
3.6	Conclusions	95
3.6.1	Suggestions for Future Directions	96
3.6.2	Implications for PVA	97
	References	98

4 **The Relationship Between Plant-Pathogen and Plant-Herbivore Interactions and Plant Population Persistence in a Fragmented Landscape**

N.J. OUBORG and A. BIERE

4.1	Introduction	105
4.2	Effects of Habitat Fragmentation on Species Interactions	106
4.3	The Interaction Between Plants and Diseases and Herbivores	107
4.4	Habitat Fragmentation and Disease Susceptibility	109
4.4.1	Disease Incidence and Genetic Drift	110
4.4.2	Disease Incidence and Inbreeding	111
4.4.3	Disease Incidence and Population Dynamics: Thresholds	114
4.4.4	Disease Incidence and Multitrophic Interactions	116
4.5	Conclusions	118
	References	119

**5 The Origin and Extinction of Species
 Through Hybridization 125**
 C.A. BUERKLE, D.E. WOLF and L.H. RIESENBERG

5.1 Introduction: Consequences of Hybridization 125

5.1.1 Maintenance of Stable Hybrid Zones 126

5.1.2 Extinction Through Hybridization with Congeners 128

5.1.3 Hybrid Speciation and Adaptive Trait Introgression 132

5.2 The Relative Frequency Of Extinction, Homoploid
 Speciation and Other Consequences of Hybridization 136

5.2.1 Methods 136

5.2.2 Results 137

5.2.3 Discussion 138

5.3 Frequency of Outcomes: Overview 139

5.4 Species Conservation Among Hybridizing Taxa 143

5.4.1 Anthropogenic Disturbance and Hybridization 144

5.4.2 Conclusion: Implications for Population Viability
 Analysis and Management 145

References 147

II. Modeling Approaches for Population Viability Analysis

**6 Approaches to Modeling Population Viability In Plants:
 An Overview 155**
 C.A. BRIGHAM and D.M. THOMSON

6.1 Introduction 155

6.2 Unstructured Models 157

6.2.1 The Diffusion Approximation 157

6.2.2 When to Use Unstructured Models 160

6.3 Stage-Structured Models 161

6.3.1 Developing a Matrix Model 163

6.3.2 Sensitivity and Elasticity Analysis 166

6.3.3 When to Use Stage-Structured Models 168

6.4 Spatially Structured Models 169

6.4.1 Metapopulation Models 170

6.4.2 Spatially Structured Matrix Models 173

6.4.3 When to Use Spatially Structured Models 174

6.5 Genetics in Population Viability Analysis 175

6.6 Future Directions 176

6.7 Conclusions 178

References 178

7	The Problems and Potential of Count-Based Population Viability Analyses	185
	B.D. ELDERD, P. SHAHANI, and D.F. DOAK	
7.1	Introduction	185
7.1.1	A Genealogy of Count-Based PVA	187
7.1.2	The Basics of Count-Based PVA	188
7.1.3	Problems and Criticisms of the DA Method of PVA	192
7.2	Methods	196
7.3	Results	200
7.3.1	Predictions of Population Growth	200
7.3.2	Predictions of Extinction Risk	203
7.3.3	Ranking Relative Risk	206
7.3.4	Effects of an Unseen Stage	209
