ACKNOWLEDGEMENTS	ix
ABOUT THE AUTHOR	xi
FOREWORD	xiii
INTRODUCTION	1
CHAPTER 1 / <i>Watersheds</i>	7
1. How and What to Spotlight	7
2. How Much Should be Explained	17
3. Images: Are they <i>always</i> useful?	19
4. Experiments: Are they supposed to help?	27
APPENDIX 1: Some General Intentions Are Very Similar in the Various Syllabuses	35
APPENDIX 2: Why the Pinhole Camera is no Longer on the Syllabus	39
CHAPTER 2 / <i>Contact, friction and propulsion</i>	41
1. Laws that Run Counter to Common Sense	41
2. A Method of Spotlighting the Basics	43
3. A Way of Spotlighting Friction: goals and difficulties	45
4. First Elements of Static Friction: step by step	49
5. Analysing the Sequence: lines of attention	53
6. Evaluation of the Sequence with Students	55
7. Reactions of Trainee Teachers	61
8. What Conclusion Should We Draw?	63
APPENDIX 1: The Technique of Fragmented Diagrams	65
APPENDIX 2: Two Situations for Studying Kinetic Friction	70
APPENDIX 3: Trainee Teachers' Comments on the Sequence	71

CHAPTER 3 / <i>Pressure in Fluids in the Presence of Gravity</i>	75
1. Questions About the Merits of a Microscopic Approach	75
2. The Macroscopic Level: what quantities “have to be”?	78
3. Fluid Statics: common ideas among students	79
4. A Proposal for the Teaching of Fluid Statics	86
5. Analysing the Sequence: lines of attention	98
6. Evaluation of the Sequence with Students	100
7. Teachers’ Reactions	109
8. Conclusion	111
APPENDIX: Main Results of the External Evaluation	116
CHAPTER 4 / <i>Superposition of Electric Fields</i>	121
1. Interaction at a Distance and Superposition	121
2. Charges, Fields and Superposition: selected aspects	124
3. Superposition and Causality: common forms of reasoning	125
4. Elements of a Teaching Sequence	131
5. Analysing the Sequence: lines of attention	133
6. Evaluation of the Sequence	134
7. Conclusion	141
APPENDIX 1: Contents Previously Taught to Students Questioned in the Preliminary Survey	144
APPENDIX 2: Electrostatics and Electric Circuits Disconnected: the field in wires	145

CHAPTER 5 / <i>Superposition of Waves and Optical Imaging</i>	147
1. Choosing a Model	147
2. Common Difficulties and “Spotlighting” of the Content	149
3. Analysing the Proposal: some elements	164
4. Reactions of In-Service or Trainee Teachers	169
5. Conclusion	176
CHAPTER 6 / <i>Colour Phenomena</i>	181
1. A Topic at a Crossroads	181
2. Colour Phenomena and Light: the chosen approach	182
3. Common Ideas: too exclusive a linkage	183
4. A Proposed Sequence	185
5. More Detail, Following the Lines of Attention	188
6. Evaluation of the Sequence	191
7. Teachers’ Reactions	196
8. Conclusion	201
APPENDIX 1: Additive and Subtractive Mixing	203
APPENDIX 2: Aspects of Knowledge Whose Acquisition is Evaluated One Year after the Sequence	204
CONCLUSION	207
BIBLIOGRAPHY	221
INDEX OF NAMES	233
