<b>Foreword</b>	v
<b>Preface</b>	vii
<b>I VECTOR CALCULUS</b>	<b>1</b>
<b>1 Introduction and Basic Definitions</b>	<b>2</b>
<b>2 The Scalar Product</b>	<b>5</b>
<b>3 Component Representation of a Vector</b>	<b>9</b>
<b>4 The Vector Product (Axial Vector)</b>	<b>13</b>
<b>5 The Triple Scalar Product</b>	<b>25</b>
<b>6 Application of Vector Calculus</b>	<b>27</b>
Application in mathematics:	27
Application in physics:	31
<b>7 Differentiation and Integration of Vectors</b>	<b>39</b>
<b>8 The Moving Trihedral (Accompanying Dreibein)—the Frenet Formulas</b>	<b>49</b>
Examples on Frenet's formulas:	55
	<b>ix</b>

<b>9 Surfaces in Space</b>	64
<b>10 Coordinate Frames</b>	68
<b>11 Vector Differential Operations</b>	83
The operations gradient, divergence, and curl (rotation)	83
Differential operators in arbitrary general (curvilinear) coordinates	96
<b>12 Determination of Line Integrals</b>	109
<b>13 The Integral Laws of Gauss and Stokes</b>	112
Gauss Law:	112
The Gauss theorem:	114
Geometric interpretation of the Gauss theorem:	115
Stokes law:	117
<b>14 Calculation of Surface Integrals</b>	125
<b>15 Volume (Space) Integrals</b>	130
 <b>II NEWTONIAN MECHANICS</b>	 133
<b>16 Newton's Axioms</b>	134
<b>17 Basic Concepts of Mechanics</b>	140
Inertial systems	140
Measurement of masses	141
Work	141
Kinetic energy	142
Conservative forces	142
Potential	143
Energy law	144
Equivalence of impulse of force and momentum change	144
Angular momentum and torque	149
Conservation law of angular momentum	150
Law of conservation of the linear momentum	150
Summary	150
The law of areas	151
Conservation of orientation	151

<b>18 The General Linear Motion</b>	159
<b>19 The Free Fall</b>	163
Vertical throw	164
Inclined throw	166
<b>20 Friction</b>	172
Friction phenomena in a viscous medium	172
Motion in a viscous medium with Newtonian friction	177
Generalized <i>ansatz</i> for friction:	179
<b>21 The Harmonic Oscillator</b>	196
<b>22 Mathematical Interlude—Series Expansion, Euler's Formulas</b>	210
<b>23 The Damped Harmonic Oscillator</b>	214
<b>24 The Pendulum</b>	229
<b>25 Mathematical Interlude: Differential Equations</b>	241
<b>26 Planetary Motions</b>	246
<b>27 Special Problems in Central Fields</b>	282
The gravitational field of extended bodies	282
The attractive force of a spherical mass shell	283
The gravitational potential of a spherical shell covered with mass	285
Stability of circular orbits	289
<b>28 The Earth and our Solar System</b>	295
General notions of astronomy	295
Determination of astronomic quantities	296
Properties, position, and evolution of the solar system	308
World views	315
On the evolution of the universe	325
Dark Matter	330
What is the nature of the dark matter?	338

<b>III</b>	<b>THEORY OF RELATIVITY</b>	361
<b>29</b>	<b>Relativity Principle and Michelson–Morley Experiment</b>	362
	The Michelson–Morley experiment	364
<b>30</b>	<b>The Lorentz Transformation</b>	370
	Rotation of a three-dimensional coordinate frame	372
	The Minkowski space	374
	Group property of the Lorentz transformation	383
<b>31</b>	<b>Properties of the Lorentz transformation</b>	389
	Time dilatation	389
	Lorentz–Fitzgerald length contraction	394
	Note on the invisibility of the Lorentz–Fitzgerald length contraction	396
	The visible appearance of quickly moving bodies	398
	Optical appearance of a quickly moving cube	398
	Optical appearance of bodies moving with almost the speed of light	400
	Light intensity distribution of a moving isotropic emitter	404
	Doppler shift of quickly moving bodies	407
	Relativistic space-time structure—space-time events	412
	Relativistic past, present, future	413
	The causality principle	414
	The Lorentz transformation in the two-dimensional subspace of the Minkowski space	415
<b>32</b>	<b>Addition Theorem of the Velocities</b>	419
	Supervelocity of light, phase, and group velocity	421

<b>33 The Basic Quantities of Mechanics in Minkowski Space</b>	<b>425</b>
Lorentz scalars	426
Four-velocity in Minkowski space	427
Momentum in Minkowski space	428
Minkowski force (four-force)	428
Kinetic energy	433
The Tachyon hypothesis	442
Derivation of the energy law in the Minkowski space	444
The fourth momentum component	445
Conservation of momentum and energy for a free particle	446
Relativistic energy for free particles	446
Examples on the equivalence of mass and energy	448
<b>34 Applications of the Special Theory of Relativity</b>	<b>461</b>
The elastic collision	461
Compton scattering	465
The inelastic collision	468
Decay of an unstable particle	470
<b>Index</b>	<b>485</b>
