
Contents

1	Introduction	1
2	Random Variables	5
2.1	Random Events and Probability	6
2.2	Random Variables	7
2.3	Means and Moments	10
2.4	Median and Mode of a Probability Distribution	12
2.5	Joint Random Variables	13
2.6	Covariance	16
2.7	Change of Variables	18
2.8	Stochastic Vectors	19
	Exercises	22
3	Fluctuations and Covariance	25
3.1	Stochastic Processes	25
3.2	Stationarity and Ergodicity	28
3.3	Ergodicity in Statistical Physics	32
3.4	Generalization to Stochastic Fields	34
3.5	Random Sequences and Cyclostationarity	35
3.6	Ergodic and Stationary Cases	40
3.7	Application to Optical Coherence	41
3.8	Fields and Partial Differential Equations	42
3.9	Power Spectral Density	44
3.10	Filters and Fluctuations	46
3.11	Application to Optical Imaging	50
3.12	Green Functions and Fluctuations	52
3.13	Stochastic Vector Fields	56
3.14	Application to the Polarization of Light	57
3.15	Ergodicity and Polarization of Light	61
3.16	Appendix: Wiener–Khinchine Theorem	64
	Exercises	66

4	Limit Theorems and Fluctuations	71
4.1	Sum of Random Variables	71
4.2	Characteristic Function	74
4.3	Central Limit Theorem	76
4.4	Gaussian Noise and Stable Probability Laws	80
4.5	A Simple Model of Speckle	81
4.6	Random Walks	89
4.7	Application to Diffusion	92
4.8	Random Walks and Space Dimensions	97
4.9	Rare Events and Particle Noise	100
4.10	Low Flux Speckle	102
	Exercises	104
5	Information and Fluctuations	109
5.1	Shannon Information	109
5.2	Entropy	111
5.3	Kolmogorov Complexity	114
5.4	Information and Stochastic Processes	117
5.5	Maximum Entropy Principle	119
5.6	Entropy of Continuous Distributions	122
5.7	Entropy, Propagation and Diffusion	124
5.8	Multidimensional Gaussian Case	128
5.9	Kullback–Leibler Measure	130
5.10	Appendix: Lagrange Multipliers	133
	Exercises	134
6	Thermodynamic Fluctuations	137
6.1	Gibbs Statistics	137
6.2	Free Energy	141
6.3	Connection with Thermodynamics	142
6.4	Covariance of Fluctuations	143
6.5	A Simple Example	146
6.6	Fluctuation–Dissipation Theorem	149
6.7	Noise at the Terminals of an RC Circuit	153
6.8	Phase Transitions	158
6.9	Critical Fluctuations	161
	Exercises	163
7	Statistical Estimation	167
7.1	The Example of Poisson Noise	167
7.2	The Language of Statistics	169
7.3	Characterizing an Estimator	169
7.4	Maximum Likelihood Estimator	174
7.5	Cramer–Rao Bound in the Scalar Case	177
7.6	Exponential Family	179

7.7	Example Applications	181
7.8	Cramer–Rao Bound in the Vectorial Case.....	182
7.9	Likelihood and the Exponential Family	183
7.10	Examples in the Exponential Family	186
7.10.1	Estimating the Parameter in the Poisson Distribution	187
7.10.2	Estimating the Mean of the Gamma Distribution	187
7.10.3	Estimating the Mean of the Gaussian Distribution	188
7.10.4	Estimating the Variance of the Gaussian Distribution ..	189
7.10.5	Estimating the Mean of the Weibull Distribution	190
7.11	Robustness of Estimators	192
7.12	Appendix: Scalar Cramer–Rao Bound	196
7.13	Appendix: Efficient Statistics	199
7.14	Appendix: Vectorial Cramer–Rao Bound	200
	Exercises	205
8	Examples of Estimation in Physics	209
8.1	Measurement of Optical Flux	209
8.2	Measurement Accuracy in the Presence of Gaussian Noise ...	212
8.3	Estimating a Detection Efficiency	217
8.4	Estimating the Covariance Matrix	219
8.5	Application to Coherency Matrices	221
8.6	Making Estimates in the Presence of Speckle	224
8.7	Fluctuation–Dissipation and Estimation	225
	Exercises	227
9	Solutions to Exercises	231
9.1	Chapter Two. Random Variables	231
9.2	Chapter Three. Fluctuations and Covariance	235
9.3	Chapter Four. Limit Theorems and Fluctuations	243
9.4	Chapter Five. Information and Fluctuations	250
9.5	Chapter Six. Statistical Physics	259
9.6	Chapter Seven. Statistical Estimation	266
9.7	Chapter Eight. Examples of Estimation in Physics	271
	References	285
	Index	287

Noise Theory and Application to Physics
From Fluctuations to Information

Réfrégier, P.

2004, XIII, 288 p., Hardcover

ISBN: 978-0-387-20154-2
