Foreword

SECTION 1: Isolation of Nucleic Acids

1.01	Simplified protocols for the preparation of genomic DNA from bacterial cultures Edward Moore, Angelika Arnscheidt, Annette Krüger, Carsten Strömpl and Margit Mau	3
1.02	Extraction of ribosomal RNA from microbial cultures Erko Stackebrandt and Naomi Ward	19
1.03	Extraction of microbial DNA from aquatic sources: Marine environments John H. Paul	29
1.04	Extraction of microbial DNA from aquatic sources: Freshwater Roger W. Pickup, Glenn Rhodes and Jon R. Saunders	41
1.05	Methods for extracting DNA from microbial mats and cultivated micro-organisms: high molecular weight DNA from French press lysis Mary M. Bateson and David M. Ward	53
1.06	Extraction of microbial DNA from aquatic sediments Elizabeth Wheeler Alm and David A. Stahl	61
1.07	Extraction of microbial RNA from aquatic sources: Marine environments Scott L. Pichard and John H. Paul	89

1.08	Extraction of total RNA and DNA from bacterioplankton Stefan Eichler, Markus G. Weinbauer, Katja Dominik and Manfred G. Höfle	103
1.09	Methods for extracting RNA or ribosomes from microbial mats and cultivated microorganisms David M. Ward, Alyson L. Ruff-Roberts and Roland Weller	121
1.10	Cell extraction method Vigdis Torsvik	135
1.11	DNA and RNA extraction from soil Robert I. Griffiths, Mike Manefield, Andrew S. Whiteley and Mark J. Bailey	149
1.12	Rapid simultaneous extraction of DNA and RNA from bulk and rhizosphere soil Newton C.M. Gomes, Rodrigo Costa and Kornelia Smalla	159
1.13	Direct Extraction of Fungal DNA from Soil Ross N. Nazar, E. Jane Robb and Tatiana Volossiuk	171
1.14	Purification of microbial genes from soil and rhizosphere by magnetic capture hybridization and subsequent amplification of target genes by PCR Carsten S. Jacobsen	181
1.15	Direct ribosome isolation from soil Andreas Felske, Horst Backhaus and Antoon D.L. Akkermans	189
1.16	DNA Extraction from Actinorhizal Nodules Hugo Ramírez-Saad, Wilma M. Akkermans and Antoon D.L. Akkermans	201
<i>SECTION 2: Detection of microbial nucleic acid sequences</i>		
2.01	Quantification of nucleic acids Vigdis Torsvik	215
2.02	Quantification of nucleic acids from aquatic environments by using green-fluorescent dyes and microtiter plates Markus G. Weinbauer and Manfred G. Höfle	223

2.03	Degradation and turnover of extracellular DNA in marine sediments Antonio Dell'anno and Cinzia Corinaldesi	235
2.04	Incorporation of thymidine into DNA of soil bacteria Erland Bååth	243
2.05	Preparation of radioactive probes Martin Cunningham	251
2.06	Detection of Nucleic Acids by Chemiluminescence Bronwen Harvey, Martin Cunningham and Martin Harris	289
2.07	Parameters of nucleic acid hybridization experiments Cindy H. Nakatsu and Larry J. Forney	321
2.08	Detection and quantification of microbial DNA sequences in soil by Southern- and dot/slot blot hybridization Carsten S. Jacobsen	333
2.09	Detection of microbial DNA sequences by colony hybridization Penny R. Hirsch	345
2.10	Polymerase chain reaction analysis of soil microbial DNA Jan Dirk van Elsas and Hidde Boersma	357
2.11	Detection of microbial nucleic acids by polymerase chain reaction in aquatic samples Asim K. Bej	369
2.12	Isolation and detection of bacterial DNA sequences in dairy products Lieve Herman and Nicolette Klijn	433
2.13	Quantitative PCR of environmental samples Janet K. Jansson and Thomas Leser	445
2.14	Molecular beacons for homogeneous real-time monitoring of amplification products Marianna Szemes, Cor D. Schoen and Jan M. Van der Wolf	465
2.15	Detection and enumeration of soil bacteria using the MPN-PCR technique Christine Picard, Xavier Nesme and Pascal Simonet	483

2.16	Detection of mRNA and rRNA via reverse transcription and PCR in soil Sonja Selenska-Pobell	493
<i>SECTION 3: Identification and classification of microbes using DNA and RNA sequences</i>		
3.01	Amplification of ribosomal RNA sequences Richard Devereux and Sherry S. Wilkinson	509
3.02	Cloning 16S rRNA genes and utilization to type bacterial communities Andreas Felske and Roland Weller	523
3.03	SARST, Serial Analysis of Ribosomal Sequence Tags Josh D. Neufeld, Zhongtang Yu, Wan Lam, William W. Mohn	543
3.04	Oligonucleotide Fingerprinting of Ribosomal RNA Genes (OFRG) Lea Valinsky, Alexandra J Scupham, Gianluca Della Vedova, Zheng Liu, Andres Figueroa, Katechan Jampachaisri, Bei Yin, Elizabeth Bent, Robert Mancini-Jones, James Press, Tao Jiang and James Borneman	569
3.05	Genotyping of bacterial isolates from the environment using Low-Molecular-Weight RNA fingerprints Manfred G. Höfle	587
3.06	Characterization of the diversity of ecologically important microbes by rep-PCR genomic fingerprinting Jan L.W. Rademaker, Frank J. Louws, James Versalovic and Frans J. de Bruijn	611
3.07	Genomic Fingerprinting of Micro-organisms by AFLP TM and ERIC-anchor PCR Henk J.M. Aarts, Angela H.A.M van Hoek and Jaap Keijer	645
3.08	The use of pulsed-field gel electrophoresis to study bacteria recovered from the environment Julian J. Smith and Gerry S. Saddler	661
3.09	Easy individual strain and community typing by rDNA ITS1 analysis X. Nesme, and P. Normand	671

3.10	<i>In situ</i> PCR methodologies for visualization of microscale genetic and taxonomic diversities of prokaryotic communities Wendy Dustman, Feng Chen, Mary Ann Moran and Robert E. Hodson	689
3.11	Sensitive multi-color fluorescence <i>in situ</i> hybridization for the identification of environmental microorganisms Annelie Pernthaler, Jakob Pernthaler and Rudolf Amann	711
3.12	Use of Cloned Artificial Targets for FISH (catFISH) for the optimization of oligonucleotide probe hybridization conditions with 16S rRNA clones for <i>in situ</i> quantification of uncultivated prokaryotic cells Cleber C. Ouverney, Gary C. Armitage and David A. Relman	727
3.13	Denaturing gradient gel electrophoresis (DGGE) in microbial ecology Gerard Muyzer, Thorsten Brinkhoff, Ulrich Nübel, Cecilia Santegoeds, Hendrik Schäfer and Cathrin Wawer	743
3.14	Fungal Community Analysis using PCR- Denaturing Gradient Gel Electrophoresis (DGGE) George Kowalchuk and Eric Smit	771
3.15	The Analysis of Microbial Communities with Terminal Restriction Fragment Length Polymorphism (T-RFLP) Sang-Hoon Kim and Terence L. Marsh	789
3.16	Microbial community analysis by PCR-single-strand conformation polymorphism (PCR-SSCP) Anja B. Dohrmann and Christoph C. Tebbe	809
3.17	Isolation of high molecular weight genomic DNA from soil bacteria for genomic library construction Mark R. Liles, Lynn L. Williamson, Jo Handelsman and Robert M. Goodman	839
SECTION 4: Detection, identification and classification of microbes using other methods		
4.01	Use of Biolog® for the Community Level Physiological Profiling (CLPP) of environmental samples Heribert Insam and Marta Goberna	853

4.02	Fluorescent staining of microbes for total direct counts Jaap Bloem and An Vos	861
4.03	Detection of microbes by Scanning Confocal Laser Microscopy (SCLM) Michael Schmid, Michael Rothballer, Bernhard Aßmus, Peter Hutzler, John R. Lawrence, Michael Schlöter and Anton Hartmann	875
4.04	Production of anti-microbial antibodies and their utilization in studies of microbial autecology by immunofluorescence microscopy and <i>in situ</i> CMEIAS image analysis Frank B. Dazzo	911
4.05	The slide immunoenzymatic assay (SIA): A simple and low cost system suitable for detecting water-borne microbes without the need for sophisticated technological infrastructure Everly Conway de Macario, Claire Jarmey-Swan, Alan R. Howgrave-Graham and Alberto J. L. Macario	933
4.06	<i>In situ</i> hybridization to detect microbial messenger RNA in plant tissues Katharina Pawlowski, Kirill Demchenko and Ton Bisseling	953
4.07	Fatty acid analysis in the identification, taxonomy and ecology of (plant pathogenic) bacteria Jaap D. Janse	973
4.08	Determination of microbial community structure using phospholipid fatty acid profiles Robert H. Findlay	983
4.09	Respiratory lipoquinones as biomarkers B.J. Tindall	1005
4.10	Environmental Proteomics: Methods and Applications for Aquatic Ecosystems Oladele A. Ogunseitan and James F. Leblanc	1027
<i>SECTION 5: Detection of gene transfer in the environment</i>		
5.01	Natural transformation in aquatic environments John H. Paul and Haydn G. Williams	1047

5.02	Natural transformation in soil: microcosm studies Kaare Magne Nielsen, Jessica Louise Ray, Jan Dirk Van Elsas	1069
5.03	Plasmid transfer in aquatic environments Søren J. Sørensen, Gunnar Oregaard, Julia R. de Liphay and Niels Kroer	1081
5.04	Conjugation in the epilithon Katja E. Hill, Julian R. Marchesi and John C. fry	1109
5.05	Detection of bacterial conjugation in soil Jan Dirk van Elsas, Hidde Boersma and Eric Smit	1141
5.06	Transduction in the aquatic environment Martin Day and Julian Marchesi	1151
5.07	Phage ecology and genetic exchange in soil Paul R. Herron	1173
<i>SECTION 6: Tracking of specific microbes in the environment</i>		
6.01	Lac as a marker gene to track microbes in the environment Frans de Leij and Nigel Bainton	1187
6.02	<i>XylE</i> as a marker gene for microorganisms Roger W. Pickup, Jon R. Saunders, J. Alun Morgan, Craig Winstanley and Venetia A. Saunders	1201
6.03	GUS as a marker to track microbes Kate J. Wilson	1217
6.04	The <i>celB</i> marker gene Angela Sessitsch, Kate J. Wilson, Antoon D. L. Akkermans and Willem M. de Vos	1241
6.05	Visualisation of microbes and their interactions in the rhizosphere using auto fluorescent proteins as markers Guido V. Bloemberg, Anastasia Lagopodi, Frans J. de Bruijn and Janet K. Jansson	1257
6.06	Identification of bacteria by their intrinsic sequences: Probe design and testing of their specificity Éva Tas and Kristina Lindström	1281

6.07	Subtraction hybridization for the production of high specificity DNA probes A.J. Bjourson, W. Streit and J.E. Cooper	1291
6.08	Considerations for the use of functional markers and field release of genetically engineered microorganisms to soils and plants Mark J. Bailey, Tracey. M. Timms-Wilson and Andrew K. Lilley	1305
<i>SECTION 7: Statistical, computer-assisted and other analyses</i>		
7.01	Application of ecological diversity statistics in microbial ecology Jennifer B. Hughes and Brendan J.M. Bohannon	1321
7.02	Sampling efficiency and interpretation of diversity in 16S rRNA gene libraries John Dunbar	1345
7.03	LIBSHUFF Comparisons of 16S rRNA Gene Clone Libraries David R. Singleton, Steven L. Rathbun, Glen E. Dyszynski and William B. Whitman	1361
7.04	Cluster analysis and statistical comparison of molecular community profile data Henk W. van Verseveld and Wilfred F. M. Röling	1373
7.05	Computer-assisted analysis of molecular fingerprint profiles and database construction Jan L.W. Rademaker and Frans J. de Bruijn	1397
7.06	Multivariate statistical methods and artificial neural networks for analysis of microbial community molecular fingerprints Sherry L. Dollhopf, Héctor L. Ayala-Del-Río, Syed A. Hashsham and James M. Tiedje	1447
7.07	Quantitative fluorescence in situ hybridisation (FISH): statistical methods for valid cell counting Russell James Davenport and Thomas Peter Curtis	1487
7.08	Oligonucleotide probe design for mixed microbial community microarrays and other applications and important considerations for data analysis Syed Hashsham, Stephen Callister and Marjolijn Tijdens	1517

7.09	Design of microarrays for genome-wide expression profiling Anke Becker	1543
------	---	------

SECTION 8: Molecular tools to assess microbial activities

8.01	Assessment of the membrane potential, intracellular pH and respiration of bacteria employing fluorescence techniques Pieter Breeuwer and Tjakko Abee	1563
8.02	Use of microelectrodes to measure <i>in situ</i> microbial activities in biofilms, sediments, and microbial mats Armin Gieseke, Dirk de Beer	1581
8.03	Application of whole-cell biosensors in soil Søren Johannes Sørensen, Lars Hestbjerg Hansen, Mette Burmølle, Gunnar Oregaard and Pernille Hermansen	1613
8.04	Detection of bacterial homoserine lactone quorum sensing signals Scott A. Rice, Staffan Kjelleberg, Michael Givskov, Wietse de Boer and Leonid S. Chernin	1629
8.05	BrdU Substrate Utilization Assay Bei Yin, Alexadra J Scupham, Elizabeth Bent and James Borneman	1651
8.06	Stable isotope probing of nucleic acids to identify active microbial populations Stefan Radajewski, Ian R. McDonald and J. Colin Murrell	1661
8.07	Linking microbial community structure and functioning: stable isotope (^{13}C) labeling in combination with PLFA analysis H.T.S. Boschker	1673
8.08	Correlating single-cell count with function in mixed natural microbial communities through STARFISH Cleber C. Ouverney and Jed A. Fuhrman	1689
8.09	Differential display of mRNA E.J. Kok, E.N.W. Van der Wal-Winnubst, A.M.A. Van Hoef and J. Keijer	1711
8.10	Macro-arrays protocols for gene expression studies in bacteria Frederic Ampe and Jacques Batut	1721

8.11	Oligonucleotide-based functional gene arrays for analysis of microbial communities in the environment Sonia M. Tiquia, Song C. Chong, Matthew W. Fields and Jizhong Zhou	1743
8.12	Proteomic Analysis of Bacterial Systems Barry G. Rolfe, Michael Djordjevic, Hancal Chen, Charles Hocart, Georg Weiller and Ulrike Mathesius	1763
