I	Continuous-Time Control	1
1	Dynamic Modelling of Chemical Processes	3
1.1	References	3
1.2	Applications of Process Control	3
1.3	Process Description from the Control Engineer's Viewpoint	4
1.4	Model Classification	7
1.5	State-Space Models	8
1.6	Examples of Models in Chemical Engineering	9
1.6.1	Lumped-Parameter Systems	9
1.6.2	Distributed-Parameter Systems	18
1.6.3	Degrees of Freedom	19
1.7	Process Stability	20
1.8	Order of a System	20
1.9	Laplace Transform	21
1.9.1	Linearization and Deviation Variables	22
1.9.2	Some Important Properties of Laplace Transformation	24
1.9.3	Transfer Function	27
1.9.4	Poles and Zeros of a Transfer Function	35
1.9.5	Qualitative Analysis of a System Response	36
1.10	Linear Systems in State Space	39
1.10.1	General Case	39
1.10.2	Analog Representation	40
1.11	Dynamic Behaviour of Simple Processes	42
1.11.1	First-Order Systems	44
1.11.2	Integrating Systems	45
1.11.3	Second-Order Systems	46
1.11.4	Higher-Order Systems	50
1.11.5	Process Identification in the Continuous Domain	57
2	Linear Feedback Control	65
2.1	Design of a Feedback Loop	65
2.1.1	Block Diagram of the Feedback Loop	65
2.1.2	General Types of Controllers	67
2.1.3	Sensors	69

2.1.4	Transmission Lines	71
2.1.5	Actuators	71
2.2	Block Diagrams, Signal-Flow Graphs, Calculation Rules	73
2.3	Dynamics of Feedback-Controlled Processes	82
2.3.1	Study of Different Actions	85
2.3.2	Influence of Proportional Action	86
2.3.3	Influence of Integral Action	90
2.3.4	Influence of Derivative Action	93
2.3.5	Summary of Controllers Characteristics	97
3	Stability Analysis	103
3.1	Case of a System Defined by its Transfer Function	103
3.2	State-Space Analysis	104
3.2.1	General Analysis for a Continuous Nonlinear System	104
3.2.2	Case of a Linear Continuous System	109
3.2.3	Case of a Nonlinear Continuous System: The Polymerization Reactor	111
3.2.4	State-Space Analysis of a Linear System	117
3.3	Stability Analysis of Feedback Systems	118
3.3.1	Routh-Hurwitz Criterion	119
3.3.2	Root Locus Analysis	121
3.3.3	Frequency Method	126
4	Design of Feedback Controllers	129
4.1	Performance Criteria	129
4.2	Transient Response Characteristics	131
4.3	Performance Criteria for Design	131
4.4	Choice of PID Controller	134
4.4.1	General Remarks	134
4.4.2	Recommendations	135
4.5	PID Controller Tuning	136
4.5.1	Tuning by Trial and Error	136
4.5.2	Sustained Oscillation Method	137
4.5.3	Relay Oscillation Method	138
4.5.4	Process Reaction Curve Method	143
4.6	PID Improvement	145
4.6.1	PID Controller with Derivative Action on the Measured Output	146
4.6.2	Use of a Reference Trajectory	147
4.6.3	Discretized PID Controller	148
4.6.4	Anti-Windup Controller	149
4.6.5	PID Control by On–Off Action	150
4.6.6	pH Control	153
4.7	Direct Synthesis Method	158
4.8	Internal Model Control	158
4.9	Pole-Placement	165

4.9.1	Robustness of Pole-Placement Control	171
4.9.2	Unitary Feedback Controller	173
4.10	Linear Quadratic Control	173
4.10.1	Regulation Behaviour	174
4.10.2	Tracking Behaviour	175
5	Frequency Analysis	183
5.1	Response of a Linear System to a Sinusoidal Input	183
5.1.1	Case of a First-Order Process	183
5.1.2	Note on Complex Numbers	185
5.1.3	Case of any Linear Process	186
5.1.4	Case of Linear Systems in Series	187
5.2	Graphical Representation	188
5.2.1	Bode Plot	188
5.2.2	n -th-Order System	190
5.2.3	Nyquist Plot	192
5.2.4	n -th-Order System	194
5.2.5	Black Plot	195
5.3	Characterization of a System by Frequency Analysis	195
5.4	Frequency Response of Feedback Controllers	196
5.4.1	Proportional Controller	196
5.4.2	Proportional-Integral Controller	196
5.4.3	Ideal Proportional-Derivative Controller	197
5.4.4	Proportional-Integral-Derivative Controller	198
5.5	Bode Stability Criterion	201
5.6	Gain and Phase Margins	206
5.6.1	Gain Margin	207
5.6.2	Phase Margin	208
5.7	Nyquist Stability Criterion	213
5.8	Closed-Loop Frequency Response	215
5.9	Internal Model Principle	220
5.10	Robustness	221
5.11	Summary for Controller Design	237
6	Improvement of Control Systems	239
6.1	Compensation of Time Delay	239
6.2	Inverse Response Compensation	241
6.3	Cascade Control	244
6.4	Selective Control	249
6.5	Split-Range Control	250
6.6	Feedforward Control	251
6.6.1	Generalities	251
6.6.2	Application in Distillation	252
6.6.3	Synthesis of a Feedforward Controller	253
6.6.4	Realization of a Feedforward Controller	255
6.6.5	Feedforward and Feedback Control	256

6.7	Ratio Control	258
7	State Representation, Controllability and Observability	261
7.1	State Representation	261
7.1.1	Monovariable System	261
7.1.2	Multivariable System	263
7.2	Controllability	264
7.3	Observability	268
7.4	Realizations	271
7.5	Remark on Controllability and Observability in Discrete Time .	275
II	Multivariable Control	277
8	Multivariable Control by Transfer Function Matrix	279
8.1	Introduction	279
8.2	Representation of a Multivariable Process by Transfer Function Matrix	279
8.3	Stability Study	282
8.3.1	Smith-McMillan Form	282
8.3.2	Poles and Zeros of a Transfer Function Matrix	282
8.3.3	Generalized Nyquist Criterion	282
8.3.4	Characteristic Loci	283
8.3.5	Gershgorin Circles	284
8.3.6	Niederlinski Index	286
8.4	Interaction and Decoupling	286
8.4.1	Decoupling for a 2×2 System	286
8.4.2	Disturbance Rejection	291
8.4.3	Singular Value Decomposition	291
8.4.4	Relative Gain Array	292
8.4.5	Gershgorin Circles and Interaction	298
8.5	Multivariable Robustness	298
8.6	Robustness Study of a 2×2 Distillation Column	303
8.6.1	Simplified Decoupling Analysis	303
8.6.2	Ideal Decoupling Analysis	304
8.6.3	One-Way Decoupling Analysis	305
8.6.4	Comparison of the Three Previous Decouplings	305
8.7	Synthesis of a Multivariable Controller	305
8.7.1	Controller Tuning by the Largest Modulus Method . . .	306
8.7.2	Controller Tuning by the Characteristic Loci Method . .	306
8.8	Discrete Multivariable Internal Model Control	307

III	Discrete-Time Identification	311
9	Discrete-Time Generalities and Basic Signal Processing	313
9.1	Fourier Transformation and Signal Processing	314
9.1.1	Continuous Fourier Transform	314
9.1.2	Discrete Fourier Transform	320
9.1.3	Stochastic Signals	322
9.1.4	Stochastic Stationary Signals	324
9.1.5	Summary	325
9.2	Sampling	329
9.2.1	D/A and A/D Conversions	329
9.2.2	Choice of Sampling Period	330
9.3	Filtering	336
9.3.1	First-Order Filter	337
9.3.2	Second-Order Filter	338
9.3.3	Moving Average Filter	339
9.3.4	Fast Transient Filter	339
9.4	Discrete-Time and Finite-Differences Models	340
9.5	Different Discrete Representations of a System	341
9.5.1	Discrete Representation: z -transform	342
9.5.2	Conversion of a Continuous Description in Discrete Time	362
9.5.3	Operators	365
10	Identification Principles	371
10.1	System Description	371
10.1.1	System without Disturbance	371
10.1.2	Disturbance Representation	372
10.2	Non-Parametric Identification	373
10.2.1	Frequency Identification	373
10.2.2	Identification by Correlation Analysis	374
10.2.3	Spectral Identification	376
10.3	Parametric Identification	379
10.3.1	Prediction Principles	379
10.3.2	One-Step Prediction	380
10.3.3	p -Step Predictions	385
11	Models and Methods for Parametric Identification	387
11.1	Model Structure for Parametric Identification	387
11.1.1	Linear Models of Transfer Functions	387
11.1.2	Models for Estimation in State Space	397
11.2	Models of Time-Varying Linear Systems	406
11.3	Linearization of Nonlinear Time-Varying Models	407
11.4	Principles of Parametric Estimation	407
11.4.1	Minimization of Prediction Errors	407
11.4.2	Linear Regression and Least Squares	409
11.4.3	Maximum Likelihood Method	412

11.4.4	Correlation of Prediction Errors with Past Data	415
11.4.5	Instrumental Variable Method	416
12	Parametric Estimation Algorithms	421
12.1	Linear Regression and Least Squares	421
12.2	Gradient Methods	423
12.2.1	Gradient Method Based on a Priori Error	424
12.2.2	Gradient Method Based on a Posteriori Error	427
12.3	Recursive Algorithms	429
12.3.1	Simple Recursive Least Squares	429
12.3.2	Recursive Extended Least Squares	438
12.3.3	Recursive Generalized Least Squares	438
12.3.4	Recursive Maximum Likelihood	439
12.3.5	Recursive Prediction Error Method	440
12.3.6	Instrumental Variable Method	443
12.3.7	Output Error Method	444
12.4	Algorithm Robustification	444
12.5	Validation	447
12.6	Input Sequences for Identification	448
12.7	Identification Examples	450
12.7.1	Academic Example of a Second-Order System	450
12.7.2	Identification of a Simulated Chemical Reactor	456
IV	Discrete Time Control	461
13	Digital Control	463
13.1	Pole-Placement Control	463
13.1.1	Influence of Pole Position	463
13.1.2	Control Synthesis by Pole-Placement	463
13.1.3	Relation between Pole-Placement and State Feedback	470
13.1.4	General Pole-Placement Design	474
13.1.5	Digital PID Controller	481
13.2	Discrete Internal Model Control	483
13.3	Generalities in Adaptive Control	488
14	Optimal Control	493
14.1	Introduction	493
14.2	Problem Statement	494
14.3	Variational Method in the Mathematical Framework	496
14.3.1	Variation of the Criterion	497
14.3.2	Variational Problem without Constraints, Fixed Bound- aries	499
14.3.3	Variational Problem with Constraints, General Case	499
14.3.4	Hamilton-Jacobi Equation	502
14.4	Optimal Control	504
14.4.1	Variational Methods	504

14.4.2	Variation of the Criterion	505
14.4.3	Euler Conditions	506
14.4.4	Weierstrass Condition and Hamiltonian Maximization	508
14.4.5	Hamilton-Jacobi Conditions and Equation	509
14.4.6	Maximum Principle	512
14.4.7	Singular Arcs	514
14.4.8	Numerical Issues	521
14.5	Dynamic Programming	525
14.5.1	Classical Dynamic Programming	525
14.5.2	Hamilton-Jacobi-Bellman Equation	530
14.6	Linear Quadratic Control	531
14.6.1	Continuous-Time Linear Quadratic Control	531
14.6.2	Linear Quadratic Gaussian Control	541
14.6.3	Discrete-Time Linear Quadratic Control	547
15	Generalized Predictive Control	555
15.1	Interest in Generalized Predictive Control	555
15.2	Brief Overview of Predictive Control Evolution	556
15.3	Simple Generalized Predictive Control	557
15.3.1	Theoretical Presentation	557
15.3.2	Numerical Example : Generalized Predictive Control of a Chemical Reactor	561
15.3.3	GPC seen as a Pole-Placement	562
15.4	Generalized Predictive Control with Multiple Reference Model	564
15.4.1	Theoretical Presentation	564
15.4.2	Numerical Example: Generalized Predictive Control with Performance Model of a Chemical Reactor	566
15.5	Partial State Reference Model Control	568
15.6	Generalized Predictive Control of a Chemical Reactor	568
16	Model Predictive Control	575
16.1	A General View of Model Predictive Control	575
16.2	Linear Model Predictive Control	580
16.2.1	In the Absence of Constraints	580
16.2.2	In the Presence of Constraints	581
16.2.3	Short Description of IDCOM	581
16.2.4	Dynamic Matrix Control (DMC)	581
16.2.5	Quadratic Dynamic Matrix Control (QDMC)	588
16.2.6	State-Space Formulation of Dynamic Matrix Control	590
16.2.7	State-Space Linear Model Predictive Control as OBMP	591
16.2.8	State-Space Linear Model Predictive Control as General Optimization	594
16.3	Nonlinear Model Predictive Control	595

16.3.1	Nonlinear Quadratic Dynamic Matrix Control (NLQDMC)	595
16.3.2	Other Approaches of Nonlinear Model Predictive Control	597
16.4	Model Predictive Control of a FCC	600
16.4.1	FCC Modelling	600

V Nonlinear Control 617

17	Nonlinear Geometric Control	619
17.1	Some Linear Notions Useful in Nonlinear Control	620
17.1.1	Influence of a Coordinate Change in Linear Control . .	620
17.1.2	Relative Degree	621
17.1.3	Normal Form and Relative Degree	622
17.1.4	Zero Dynamics	624
17.1.5	Static State Feedback	625
17.1.6	Pole-Placement by Static State Feedback	625
17.1.7	Input-Output Pole-Placement	627
17.2	Monovariable Nonlinear Control	627
17.2.1	Some Notions of Differential Geometry	627
17.2.2	Relative Degree of a Monovariable Nonlinear System . .	629
17.2.3	Frobenius Theorem	630
17.2.4	Coordinates Change	632
17.2.5	Normal Form	633
17.2.6	Controllability and Observability	634
17.2.7	Principle of Feedback Linearization	635
17.2.8	Exact Input-State Linearization for a System of Relative Degree Equal to n	635
17.2.9	Input-Output Linearization of a System with Relative Degree r Lower than or Equal to n	638
17.2.10	Zero Dynamics	639
17.2.11	Asymptotic Stability	642
17.2.12	Tracking of a Reference Trajectory	644
17.2.13	Decoupling with Respect to a Disturbance	644
17.2.14	Case of Nonminimum-Phase Systems	646
17.2.15	Globally Linearizing Control	646
17.3	Multivariable Nonlinear Control	647
17.3.1	Relative Degree	648
17.3.2	Coordinate Change	649
17.3.3	Normal Form	649
17.3.4	Zero Dynamics	650
17.3.5	Exact Linearization by State Feedback and Diffeomorphism	651
17.3.6	Nonlinear Control Perfectly Decoupled by Static State Feedback	651
17.3.7	Obtaining a Relative Degree by Dynamic Extension . .	653
17.3.8	Nonlinear Adaptive Control	654

17.4 Applications of Nonlinear Geometric Control	654
18 State Observers	657
18.1 Introduction	657
18.1.1 Indirect Sensors	658
18.1.2 Observer Principle	658
18.2 Parameter Estimation	659
18.3 Statistical Estimation	659
18.3.1 About the Data	660
18.3.2 Principal Component Analysis	660
18.3.3 Partial Least Squares	662
18.4 Observers	663
18.4.1 Luenberger Observer	663
18.4.2 Linear Kalman Filter	664
18.4.3 Extended Kalman Filter (EKF) in Continuous-Discrete Form	664
18.4.4 Globally Linearizing Observer	666
18.4.5 High-Gain Observer	667
18.5 Conclusion	669
 VI Applications to Processes	 673
19 Nonlinear Control of Reactors with State Estimation	675
19.1 Introduction	675
19.2 Chemical Reactor	676
19.2.1 Model of the Chemical Reactor	676
19.2.2 Control Problem Setting	677
19.2.3 Control Law	679
19.2.4 State Estimation	681
19.2.5 Simulation Results	683
19.3 Biological Reactor	687
19.3.1 Introduction	687
19.3.2 Dynamic Model of the Biological Reactor	687
19.3.3 Synthesis of the Nonlinear Control Law	689
19.3.4 Simulation Conditions	692
19.3.5 Simulation Results	693
19.3.6 Conclusion	694
 20 Distillation Column Control	 699
20.1 Generalities for Distillation Columns Behaviour	699
20.2 Dynamic Model of the Distillation Column	702
20.3 Generalities for Distillation Column Control	706
20.4 Different Types of Distillation Column Control	708
20.4.1 Single-Input Single-Output Control	708
20.4.2 Dual Decoupling Control	708
20.4.3 The Column as a 5×5 System	710

20.4.4	Linear Digital Control	712
20.4.5	Model Predictive Control	714
20.4.6	Bilinear Models	715
20.4.7	Nonlinear Control	718
20.5	Conclusion	722
21	Examples and Benchmarks of Typical Processes	727
21.1	Single-Input Single-Output Processes	727
21.1.1	Description by Transfer Functions	727
21.1.2	Description by a State-Space Knowledge Model	728
21.1.3	Description by a Linear State-Space Model	734
21.2	Multivariable Processes	734
21.2.1	Matrices of Continuous Transfer Functions	734
21.2.2	Description by a Linear State-Space Model	737
21.2.3	Description by a State-Space Knowledge Model	739
21.2.4	Continuous State-Space Models	741
