Prologue.....	1
----------------------	----------

Part I CONTEXT AND METHODOLOGY

1 Geographical Roots of Spatial Interaction	9
1.1 Analogies with Newtonian Gravitation.....	9
1.1.1 Gravity Effect Identification.....	9
1.1.2 Retail Gravity Models	10
1.1.3 Gravity and Commodity Flows	13
1.2 Bases in Entropy, Constrained Optimization and Time Geography	14
1.2.1 Entropy Basis for Gravity Models.....	14
1.2.2 Intervening Opportunities Models.....	19
1.2.3 Activities, Time Budgets and Travel	21
1.2.4 Entropy in Continuous Space	24
1.2.5 Other Entropies and Their Physical Significance	26
1.3 Further Enhancements.....	29
1.3.1 The More General Information Theory Approach.....	29
1.3.2 A Retail Equilibrium Model	33
1.3.3 Probabilistic Entropy vs Random Utility for Individual Choice.....	34
1.3.4 Cost Minimization with Entropy Constraint(s)	36
1.3.5 Some Key Conceptual Contributions	40
1.3.6 Characterization of Model Errors and Robustness	47
Appendix 1.1.....	50
2 Key Insights in ‘Space’ and Microeconomics.....	51
2.1 Some Important Theoretical Advances	51
2.1.1 Urban/Rural Model and Urban Land Models	51
2.1.2 Agglomeration in Linear Markets for Single and Comparison Goods	56
2.1.3 Linear Model of Production Location and Transport Flows.....	58
2.1.4 Imperfect Competition in Linear Space.....	60
2.2 From Theory to Applications	63
2.2.1 National, Interregional and Multi-Regional Input-Output Models	63
2.2.2 Spatial Price Equilibrium	67
2.3 Some New Directions	68

2.3.1 Increasing Returns and Monopolistic Competition	68
2.3.2 Knowledge Exchange and Space.....	71
3 Spatial Interaction Modelling Embracing Microeconomics	74
3.1 Evaluation of Relevant Previous Efforts	74
3.1.1 Re-Interpretation of a Retail Equilibrium Model	74
3.1.2 Dispersed Spatial Price Equilibrium.....	75
3.2 Comprehensive Specification of a Unifying Framework.....	77
3.2.1 Entropy in a Decision-Theoretic Context	77
3.2.2 Different Entropies for Different Decision Contexts.....	78
3.2.3 Fundamental Role of Constraints in Modelling Supply and Demand	80
3.2.4 Calibration of Open Models Adding Information via Constraints	86
3.2.5 Nesting, Clustering and Independence from Irrelevant Alternatives	91
3.2.6 Inequality and Logistic Short Run Capacity Constraints.....	95
3.2.7 Properties of Models under Aggregation.....	97
3.2.8 Surplus Evaluation by Simple Transformations of Entropy Lagrangian.....	99
3.2.9 Fulfilment of Key Economic Lemma	100
3.2.10 Non-Homogeneous Supply and Demand Functions.....	101
3.2.11 Brief Summary	101
Appendix 3.1.....	102

Part II SOME EXAMPLES OF URBAN MODELLING

4 Activities as Generators of Spatial Interaction	107
4.1 Elements of an Activity Demand Framework.....	107
4.1.1 Characterisation of the Demand for Activities	107
4.1.2 The Huff Model and its Extensions	110
4.1.3 A Comprehensive Activity-Based Model.....	116
4.2 Supply, Equilibrium and Imperfect Competition.....	126
4.2.1 Short Run Goods/Services Supply Model with Congestion.....	126
4.2.2 Short Run Demand/Supply Equilibrium.....	128
4.2.3 Movement Towards Long Run Supply Equilibrium	128
4.2.4 Observations on Imperfect Competition.....	130
5 Knowledge Exchange and Agglomeration.....	131
5.1 Fundamentals of the Contact Process	131
5.1.1 Preliminary Matching	131
5.1.2 Face-to-Face Contacts Among the Matched Pairs.....	134
5.2 An Elementary Modelling Framework for Firms.....	136
5.2.1 Elements of a Short Run Probabilistic Knowledge Supply Model..	136
5.2.2 Long Run Adjustment Processes.....	144
5.3 Concluding Remarks.....	149

6 Imperfect Competition in Land/Housing Markets	150
6.1 Introduction.....	150
6.2 The Economic Structure of the Models.....	151
6.2.1 Market Structure.....	151
6.2.2 The Behavioural Model.....	153
6.3 A Competitive Land Market	156
6.3.1 Unconstrained Models for Competitive Markets.....	156
6.3.2 Constrained Models for Competitive Markets.....	159
6.3.3 Hotelling's Lemma	162
6.4 Imperfect Competition	163
6.4.1 Unconstrained Models for Imperfect Competition	163
6.4.2 Constrained Models for Imperfect Competition	165
6.5 Final Comments	166

Part III SOME INTERREGIONAL CONTRIBUTIONS

7 Trade under Changing Networks and Technology.....	171
7.1 Trade under a Changing Transport Network with Given Technology ...	172
7.1.1 An Enhanced Deterministic Interregional Model.....	174
7.1.2 Probabilistic Multi-Regional Flows with Multi-Regional Data.....	176
7.1.3 Probabilistic Interregional Flows with Multi-Regional Data.....	180
7.1.4 Implementation Issues	182
7.1.5 Some Further Developments	185
7.2 Changes in Both Transport Networks and Production Technology	186
7.2.1 Motivation for Model	186
7.2.2 Proposed Interregional Model	187
8 Illustration of Imperfect Competition.....	190
8.1 Introduction.....	190
8.2 A General Equilibrium Framework	191
8.2.1 A Model of Producer Behaviour	191
8.2.2 A Model of Buyer/Consumer Behaviour.....	194
8.2.3 Characterisation of the Equilibrium.....	196
8.3 Consideration of Imperfect Competition.....	198
8.3.1 Specification of an Equilibrium.....	199
8.3.2 Elements of a Stackelberg Approach.....	200
8.3.3 Elements of a Solution Procedure	201
8.3.4 Surplus Evaluation.....	202
8.4 Future Directions	202
Appendix 8.1.....	203

9 Interregional Migration	205
9.1 Introduction.....	205
9.1.1 Market Segmentation.....	205
9.1.2 Choice Hierarchy.....	206
9.1.3 Reliability of Projections.....	206
9.1.4 Net Migration vs Gross Migration Models.....	207
9.1.5 Exogenous and Endogenous Quantities.....	208
9.1.6 Updating of Regional Populations.....	208
9.1.7 Properties of the Migration Flow Pattern.....	209
9.2 Comparative Static Migration Model.....	209
9.2.1 Notation.....	210
9.2.2 Model Estimation.....	211
9.2.3 Use of Estimated Model for Projection.....	214
9.2.4 Empirical Performance.....	216
9.3 A Two-Stage Dynamic Estimation Procedure.....	216
9.3.1 Relevant Previous Work.....	217
9.3.2 New Model Specification and Estimation.....	219
9.3.3 Simple Application of the Two-Stage Model.....	222
9.3.4 Future Issues.....	224
Future Challenges	227
References	229
Subject Index	237
