

Table of Contents

Soft Tissue Properties and Modeling

Experimental Observation and Modelling of Preconditioning in Soft Biological Tissues	1
<i>Alessandro Nava, Edoardo Mazza, Oliver Haefner, and Michael Bajka</i>	
The Effects of Testing Environment on the Viscoelastic Properties of Soft Tissues	9
<i>Mark P. Ottensmeyer, Amy E. Kerdok, Robert D. Howe, and Steven L. Dawson</i>	
Comparison of Linear and Non-linear Soft Tissue Models with Post-operative CT Scan in Maxillofacial Surgery	19
<i>Matthieu Chabanas, Yohan Payan, Christophe Marécaux, Pascal Swider, and Franck Boutault</i>	
Characterization of Soft-Tissue Material Properties: Large Deformation Analysis	28
<i>Tie Hu and Jaydev P. Desai</i>	
Design, Development, and Testing of an Automated Laparoscopic Grasper with 3-D Force Measurement Capability	38
<i>Gregory Tholey, Anand Pillarisetti, William Green, and Jaydev P. Desai</i>	
A Finite Element Study of the Influence of the Osteotomy Surface on the Backward Displacement during Exophthalmia Reduction	49
<i>Vincent Luboz, Annaig Pedrono, Dominique Ambard, Franck Boutault, Pascal Swider, and Yohan Payan</i>	
Liver Vessel Parameter Estimation from Tactile Imaging Information	59
<i>Anna M. Galea and Robert D. Howe</i>	
A Nonlinear Finite Element Model of Soft Tissue Indentation	67
<i>Yi Liu, Amy E. Kerdok, and Robert D. Howe</i>	
Indentation for Estimating the Human Tongue Soft Tissues Constitutive Law: Application to a 3D Biomechanical Model	77
<i>Jean-Michel Gérard, Jacques Ohayon, Vincent Luboz, Pascal Perrier, and Yohan Payan</i>	
Comparison of Knee Cruciate Ligaments Models Using In-vivo Step Up-Down Kinematics	84
<i>Rita Stagni, Silvia Fantozzi, Mario Davinelli, and Maurizio Lannocca</i>	

Real-Time Deformable Models

Multigrid Integration for Interactive Deformable Body Simulation	92
<i>Xunlei Wu and Frank Tendick</i>	
A Suture Model for Surgical Simulation	105
<i>Julien Lenoir, Philippe Meseure, Laurent Grisoni, and Christophe Chaillou</i>	
Real-Time Incision Simulation	
Using Discontinuous Free Form Deformation	114
<i>Guy Sela, Sagi Schein, and Gershon Elber</i>	
An Interactive Parallel Multigrid FEM Simulator	124
<i>Xunlei Wu, Tolga Gokce Goktekin, and Frank Tendick</i>	
On Extended Finite Element Method (XFEM) for Modelling of Organ Deformations Associated with Surgical Cuts	134
<i>Lara M. Vigneron, Jacques G. Verly, and Simon K. Warfield</i>	
Mechanical Representation of Shape-Retaining Chain Linked Model for Real-Time Haptic Rendering	144
<i>Jinah Park, Sang-Youn Kim, and Dong-Soo Kwon</i>	
Interactive Real-Time Simulation of the Internal Limiting Membrane	153
<i>Johannes P.W. Grimm, Clemens Wagner, and Reinhard Männer</i>	

Haptic Rendering

Haptic Display for All Degrees of Freedom of a Simulator for Flexible Endoscopy	161
<i>Olaf Körner, Klaus Rieger, and Reinhard Männer</i>	
Surface Contact and Reaction Force Models for Laparoscopic Simulation	168
<i>Clément Forest, Hervé Delingette, and Nicholas Ayache</i>	
A New Methodology to Characterize Sensory Interaction for Use in Laparoscopic Surgery Simulation	177
<i>Pablo Lamata, Enrique J. Gómez, Francisco M. Sánchez-Margallo, Félix Lamata, Francisco Gayá, José B. Pagador, Jesús Usón, and Francisco del Pozo</i>	
A Study on the Perception of Haptics in Surgical Simulation	185
<i>Lukas M. Batteau, Alan Liu, J.B. Antoine Maintz, Yogendra Bhasin, and Mark W. Bowyer</i>	

Anatomical Modeling

Image-Guided Analysis of Shoulder Pathologies: Modelling the 3D Deformation of the Subacromial Space during Arm Flexion and Abduction	193
<i>Alexandra Branzan Albu, Denis Laurendeau, Luc. J. Hébert, Hélène Moffet, Marie Dufour, and Christian Moisan</i>	
The Application of Embedded and Tubular Structure to Tissue Identification for the Computation of Patient-Specific Neurosurgical Simulation Models	203
<i>Michel A. Audette and Kiyoyuki Chinzei</i>	
Soft Tissue Surface Scanning – A Comparison of Commercial 3D Object Scanners for Surgical Simulation Content Creation and Medical Education Applications	211
<i>Nick J. Avis, Frederic Kleiner mann, and John McClure</i>	
Coherent Scene Generation for Surgical Simulators	221
<i>Raimundo Sierra, Michael Bajka, Celalettin Karadogan, Gábor Székely, and Matthias Harders</i>	
Build-and-Insert: Anatomical Structure Generation for Surgical Simulators	230
<i>Eric Acosta and Bharti Temkin</i>	

Applications and Development Frameworks

GiPSi: An Open Source/Open Architecture Software Development Framework for Surgical Simulation	240
<i>Tolga Gokce Goktekin, Murat Cenk Çavuşoğlu, Frank Tendick, and Shankar Sastry</i>	
CathI – Training System for PTCA. A Step Closer to Reality	249
<i>Philipp Rebholz, Carsten Bienek, Dzmitry Stsepankou, and Jürgen Hesser</i>	
Physical Model Language: Towards a Unified Representation for Continuous and Discrete Models	256
<i>Matthieu Chabanas and Emmanuel Promayon</i>	
Multi-axis Mechanical Simulator for Epidural Needle Insertion	267
<i>John Magill, Bruce Anderson, Gina Anderson, Phillip Hess, and Steve Pratt</i>	
Towards a Complete Intra-operative CT-Free Navigation System for Anterior Cruciate Ligament Reconstruction	277
<i>Kenneth Sundaraj, Christian Laugier, and François Boux-de-Casson</i>	

A Framework for Biomechanical Simulation
of Cranio-Maxillofacial Surgery Interventions 287
 Evgeny Gladilin, Alexander Ivanov, and Vitaly Roginsky

Author Index 295

Medical Simulation

International Symposium, ISMS 2004, Cambridge, MA,
USA, June 17-18, 2004, Proceedings

Metaxas, D.; Cotin, S. (Eds.)

2004, XVI, 296 p., Softcover
