

## Preface

The 7th International Colloquium on Grammatical Inference (ICGI 2004) was held in the National Centre for Scientific Research “Demokritos”, Athens, Greece on October 11–13, 2004. ICGI 2004 was the seventh in a series of successful biennial international conferences in the area of grammatical inference. Previous meetings were held in Essex, UK; Alicante, Spain; Montpellier, France; Ames, Iowa, USA; Lisbon, Portugal; and Amsterdam, The Netherlands. This series of conferences seeks to provide a forum for the presentation and discussion of original research papers on all aspects of grammatical inference.

Grammatical inference, the study of learning grammars from data, is an established research field in artificial intelligence, dating back to the 1960s, and has been extensively addressed by researchers in automata theory, language acquisition, computational linguistics, machine learning, pattern recognition, computational learning theory and neural networks. ICGI 2004 emphasized the multidisciplinary nature of the research field and the diverse domains in which grammatical inference is being applied, such as natural language acquisition, computational biology, structural pattern recognition, information retrieval, Web mining, text processing, data compression and adaptive intelligent agents.

We received 45 high-quality papers from 19 countries. The papers were reviewed by at least two – in most cases three – reviewers. In addition to the 20 full papers, 8 short papers that received positive comments from the reviewers were accepted, and they appear in a separate section of this volume. The topics of the accepted papers vary from theoretical results of learning algorithms to innovative applications of grammatical inference, and from learning several interesting classes of formal grammars to estimations of probabilistic grammars.

In conjunction with ICGI 2004, a context-free grammar learning competition, named Omphalos, took place. In an invited paper in this volume, the organizers of the competition report on the peculiarities of such an endeavor and some interesting theoretical findings. Last but not least, we are honored by the contributions of our invited speakers Prof. Dana Angluin, from Yale University, USA, and Prof. Enrique Vidal, from Universidade Politecnica de Valencia, Spain.

The editors would like to acknowledge the contribution of the Program Committee and the Additional Reviewers in reviewing the submitted papers, and thank the Organizing Committee for their invaluable help in organizing the conference. Particularly, we would like to thank Colin de la Higuera, Menno van Zaannen, Georgios Petasis, Georgios Sigletos and Evangelia Alexopoulou for their additional voluntary service to the grammatical inference community, through this conference. We would also like to acknowledge the use of the Cyberchair software, from Borbala Online Conference Services, in the submission and reviewing process. Finally, we are grateful for the generous support and sponsorship of the conference by NCSR “Demokritos”, the PASCAL and KDNET European Networks of Excellence, and Biovista: Corporate Intelligence in Biotechnology.
