## Table of Contents

### **1 Adaptive Technical Analysis in the Financial Markets Using Machine Learning: a Statistical View**

*David Edelman and Pam Davy*

1.1	‘Technical Analysis’ in Finance: a Brief Background	1
1.2	The ‘Moving Windows’ Paradigm	2
1.3	Post-Hoc Performance Assessment	3
	1.3.1 The Effect of Dividends	5
	1.3.2 Transaction Costs Approximations	6
1.4	Genetic programming	7
1.5	Support-Vector Machines	10
1.6	Neural Networks	12
1.7	Discussion	14
	References	15

### **2 Higher Order Neural Networks for Satellite Weather Prediction**

*Ming Zhang and John Fulcher*

2.1	Introduction	17
2.2	Higher Order Neural Networks	18
	2.2.1 Polynomial Higher-Order Neural Networks	20
	2.2.2 Trigonometric Higher-Order Neural Networks	23
	Output Neurons in THONN Model#1	24
	Second Hidden Layer Neurons in THONN Model#1	27
	First Hidden Layer Neurons in THONN Model#1	30
	2.2.3 Neuron-Adaptive Higher-Order Neural Network	30
2.3	Artificial Neural Network Groups	33
	2.3.1 ANN Groups	33
	2.3.2 PHONN, THONN & NAHONN Groups	34
2.4	Weather Forecasting & ANNs	35
2.5	HONN Models for Half-hour Rainfall Prediction	36
	2.5.1 PT-HONN Model	36
	2.5.2 A-PHONN Model	37

2.5.3	M-PHONN Model	38
2.5.4	Satellite Rainfall Estimation Results	38
2.6	ANSER System for Rainfall Estimation	39
2.6.1	ANSER Architecture	40
2.6.2	ANSER Operation	41
2.6.3	Reasoning Network Based on ANN Groups	43
2.6.4	Rainfall Estimation Results	45
2.7	Summary	47
	Acknowledgements	47
	References	47
	Appendix-A Second Hidden Layer (multiply) Neurons	51
	Appendix-B First Hidden Layer Neurons	54

### 3 Independent Component Analysis

*Andrew Back*

3.1	Introduction	59
3.2	Independent Component Analysis Methods	60
3.2.1	Basic Principles and Background	60
3.2.2	Mutual Information Methods	62
3.2.3	InfoMax ICA Algorithm	64
3.2.4	Natural/Relative Gradient Methods	65
3.2.5	Extended InfoMax	66
3.2.6	Adaptive Mutual Information	66
3.2.7	Fixed Point ICA Algorithm	68
3.2.8	Decorrelation and Rotation Methods	69
3.2.9	Comon Decorrelation and Rotation Algorithm	71
3.2.10	Temporal Decorrelation Methods	71
3.2.11	Molgedey and Schuster Temporal Correlation Algorithm	72
3.2.12	Spatio-temporal ICA Methods	73
3.2.13	Cumulant Tensor Methods	74
3.2.14	Nonlinear Decorrelation Methods	75
3.3	Applications of ICA	75
3.3.1	Guidelines for Applications of ICA	75
3.3.2	Biomedical Signal Processing	76
3.3.3	Extracting Speech from Noise	77
3.3.4	Unsupervised Classification Using ICA	78
3.3.5	Computational Finance	81
3.4	Open Problems for ICA Research	83
3.5	Summary	85
	References	86
	Appendix – Selected ICA Resources	95

**4 Regulatory Applications of Artificial Intelligence***Howard Copland*

4.1	Introduction	97
4.2	Solution Spaces, Data and Mining	98
4.3	Artificial Intelligence in Context	102
4.4	Anomaly Detection: ANNs for Prediction/Classification	104
4.4.1	Training to Classify on Sparse Data Sets	105
4.4.2	Training to Predict on Dense Data Sets	106
4.4.3	Feature Selection for and Performance of Anomaly Detection Suites	109
4.4.4	Interpreting Anomalies	113
4.4.5	Other Approaches to Anomaly Detection	115
4.4.6	Variations of BackProp' ANNs for Use with Complex Data Sets	120
4.5	Formulating Expert Systems to Identify Common Events of Interest	121
	A Note on the Software	130
	Acknowledgements	130
	References	130

**5 An Introduction to Collective Intelligence***Tim Hendtlass*

5.1	Collective Intelligence	133
5.1.1	A Simple Example of Stigmergy at Work	134
5.2	The Power of Collective Action	136
5.3	Optimisation	138
5.3.1	Optimisation in General	138
5.3.2	Shades of Optimisation	139
5.3.3	Exploitation versus Exploration	139
5.3.4	Example of Common Optimisation Problems	140
	Minimum Path Length	140
	Function Optimisation	140
	Sorting	141
	Multi-Component Optimisation	141
5.4	Ant Colony Optimisation	141
5.4.1	Ant Systems – the Basic Algorithm	143
	The Problem with AS	143
5.4.2	Ant Colony Systems	144
5.4.3	Ant Multi-Tour System (AMTS)	145
5.4.4	Limiting the Pheromone Density – the Max-Min Ant System	145

5.4.5	An Example: Using Ants to Solve a (simple) TSP	146
5.4.6	Practical Considerations	154
5.4.7	Adding a Local Heuristic	155
5.4.8	Other Uses for ACO	157
5.4.9	Using Ants to Sort	158
	An Example of Sorting Using ACO	162
5.5	Particle Swarm Optimisation	165
5.5.1	The Basic Particle Swarm Optimisation Algorithm	165
5.5.2	Limitations of the Basic Algorithm	166
5.5.3	Modifications to the Basic PSO Algorithm	167
	Choosing the Position S	167
	The Problem of a finite t	168
	Aggressively Searching Swarms	168
	Adding Memory to Each Particle	169
5.5.4	Performance	170
5.5.5	Solving TSP Problems Using PSO	171
	PSO Performance on a TSP	172
5.5.6	Practical Considerations	175
5.5.7	Scalability and Adaptability	176
	References	177

## 6 Where are all the Mobile Robots?

*Phillip McKerrow*

6.1	Introduction	179
6.2	Commercial Applications	181
6.2.1	Robot Couriers	182
6.2.2	Robot Vacuum Cleaners	183
6.2.3	Robot Lawn Mowers	187
6.2.4	Robot Pool Cleaners	189
6.2.5	Robot People Transporter	191
6.2.6	Robot Toys	193
6.2.7	Other Applications	195
6.2.8	Getting a Robot to Market	195
6.2.9	Wheeled Mobile Robot Research	196
6.3	Research Directions	197
6.4	Conclusion	198
	A Note on the Figures	199
	References	199

**7 Building Intelligent Legal Decision Support Systems: Past Practice and Future Challenges***John Zeleznikow*

7.1	Introduction	201
7.1.1	Benefits of Legal Decision Support Systems to the Legal Profession	202
7.1.2	Current Research in AI and Law	204
7.2	Jurisprudential Principles for Developing Intelligent Legal Knowledge-Based Systems	208
7.2.1	Reasoning with Open Texture	209
7.2.2	The Inadequacies of Modelling Law as a Series of Rules	210
7.2.3	Landmark and Commonplace Cases	211
7.3	Early Legal Decision Support Systems	214
7.3.1	Rule-Based Reasoning	214
7.3.2	Case-Based Reasoning and Hybrid Systems	219
7.3.3	Knowledge Discovery in Legal Databases	222
7.3.4	Evaluation of Legal Knowledge-Based Systems	222
7.3.5	Explanation and Argumentation in Legal Knowledge-Based Systems	231
7.4	Legal Decision Support on the World Wide Web	233
7.4.1	Legal Knowledge on the WWW	233
7.4.2	Legal Ontologies	234
7.4.3	Negotiation Support Systems	240
7.5	Conclusion	246
	Acknowledgements	247
	References	247

**8 Forming Human-Agent Teams within Hostile Environments***Christos Sioutis, Pierre Urlings, Jeffrey Tweedale, and Nikhil Ichalkaranje*

8.1	Introduction	255
8.2	Background	256
8.3	Cognitive Engineering	257
8.4	Research Challenge	258
8.4.1	Human-Agent Teaming	258
8.4.2	Agent Learning	260
8.5	The Research Environment	262
8.5.1	The Concept of Situational Awareness	262
8.5.2	The Unreal Tournament Game Platform	263
8.5.3	The Jack Agent	263

8.6	The Research Application	264
8.6.1	The Human Agent Team	264
8.6.2	The Simulated World Within Unreal Tournament	265
8.6.3	Interacting With Unreal Tournament	267
8.6.4	The Java Extension	268
8.6.5	The Jack Component	269
8.7	Demonstration System	270
8.7.1	Wrapping Behaviours in Capabilities	271
8.7.2	The Exploring Behaviours	272
8.7.3	The Defending Behaviour	273
8.8	Conclusions	275
	Acknowledgements	276
	References	276

## 9 Fuzzy Multivariate Auto-Regression Method and its Application

*N Arzu Sisman-Yilmaz, Ferda N Alpaslan and Lakhmi C Jain*

9.1	Introduction	281
9.2	Fuzzy Data Analysis	282
9.2.1	Fuzzy Regression	282
9.2.2	Fuzzy Time Series Analysis	284
9.2.3	Fuzzy Linear Regression (FLR)	285
	Basic Definitions	285
	Linear Programming Problem	285
9.3	Fuzzy Multivariate Auto-Regression Algorithm	286
	Example - Gas Furnace Data Processed by MAR	287
9.3.1	Model Selection	288
9.3.2	Motivation for FLR in Fuzzy MAR	289
9.3.3	Fuzzification of Multivariate Auto-Regression	290
9.3.4	Bayesian Information Criterion in Fuzzy MAR	291
9.3.5	Obtaining a Linear Function for a Variable	292
9.3.6	Processing of Multivariate Data	293
9.4	Experimental Results	295
9.4.1	Experiments with Gas Furnace Data	295
9.4.2	Experiments with Interest Rate Data	296
9.4.3	Discussion of Experimental Results	298
9.5	Conclusions	299
	References	299

**10 Selective Attention Adaptive Resonance theory and Object Recognition***Peter Lozo, Jason Westmacott, Quoc V Do, Lakhmi C Jain and Lai Wu*

10.1	Introduction	301
10.2	Adaptive Resonance Theory (ART)	302
	10.2.1 Limitations of ART's Attentional Subsystem with Cluttered Inputs	303
10.3	Selective Attention Adaptive Resonance Theory	305
	10.3.1 Neural Network Implementation of SAART	306
	Postsynaptic Cellular Activity	309
	Excitatory Postsynaptic Potential	309
	Lateral Competition	309
	Transmitter Dynamics	310
	10.3.2 Translation-invariant 2D Shape Recognition	312
10.4	Conclusions	317
	References	318
	<b>Index</b>	321
