Preface	v
1 Introduction	1
1 Probabilistic Neural Networks in a Non-stationary Environment	7
2 Kernel Functions for Construction of Probabilistic Neural Networks	9
2.1 Introduction . . . . .	9
2.2 Application of the Parzen kernel . . . . .	9
2.3 Application of the orthogonal series . . . . .	11
2.4 Concluding remarks . . . . .	19
3 Introduction to Probabilistic Neural Networks	21
3.1 Introduction . . . . .	21
3.2 Probabilistic neural networks for density estimation . . . . .	23
3.3 General regression neural networks in a stationary environment . . . . .	37

3.4	Probabilistic neural networks for pattern classification in a stationary environment . . . . .	48
3.5	Concluding remarks . . . . .	56
4	General Learning Procedure in a Time-Varying Environment . . . . .	59
4.1	Introduction . . . . .	59
4.2	Problem description . . . . .	60
4.3	Presentation of the general learning procedure . . . . .	60
4.4	Convergence of general learning procedure . . . . .	63
4.4.1	Local properties . . . . .	64
4.4.2	Global properties . . . . .	65
4.4.3	Speed of convergence . . . . .	67
4.5	Quasi-stationary environment . . . . .	68
4.6	Problem of prediction . . . . .	69
4.7	Concluding remarks . . . . .	70
5	Generalized Regression Neural Networks in a Time-Varying Environment . . . . .	73
5.1	Introduction . . . . .	73
5.2	Problem description and presentation of the GRNN . . . . .	77
5.3	Convergence of the GRNN in a time-varying environment . . . . .	78
5.3.1	The GRNN based on Parzen kernels . . . . .	80
5.3.2	The GRNN based on the orthogonal series . . . . .	85
5.4	Speed of convergence . . . . .	91
5.5	Modelling of systems with multiplicative non-stationarity . . . . .	93
5.6	Modelling of systems with additive non-stationarity . . . . .	109
5.7	Modelling of systems with non-stationarity of the "scale change" and "movable argument" type . . . . .	115
5.8	Modelling of systems with a diminishing non-stationarity . . . . .	126
5.9	Concluding remarks . . . . .	131
6	Probabilistic Neural Networks for Pattern Classification in a Time-Varying Environment . . . . .	135
6.1	Introduction . . . . .	135

6.2	Problem description and presentation of classification rules . . . . .	137
6.3	Asymptotic optimality of classification rules . . . . .	140
6.4	Speed of convergence of classification rules . . . . .	143
6.5	Classification procedures based on the Parzen kernels . . . . .	144
6.6	Classification procedures based on the orthogonal series . . . . .	146
6.7	Non-stationarity of the "movable argument" type . . .	149
6.8	Classification in the case of a quasi-stationary environment . . . . .	153
6.9	Simulation results . . . . .	156
6.9.1	PNN for estimation of a time-varying probability density . . . . .	156
6.9.2	PNN for classification in a time-varying environment . . . . .	164
6.10	Concluding remarks . . . . .	166
 II Soft Computing Techniques for Image Compression		168
7	Vector Quantization for Image Compression	169
7.1	Introduction . . . . .	169
7.2	Preprocessing . . . . .	169
7.3	Problem description . . . . .	173
7.4	VQ algorithm based on neural network . . . . .	175
7.5	Concluding remarks . . . . .	177
8	The DPCM Technique	179
8.1	Introduction . . . . .	179
8.2	Scalar case . . . . .	179
8.3	Vector case . . . . .	182
8.4	Application of neural network . . . . .	182
8.5	Concluding remarks . . . . .	184
9	The PVQ Scheme	185
9.1	Introduction . . . . .	185
9.2	Description of the PVQ scheme . . . . .	185
9.3	Concluding remarks . . . . .	191

10	Design of the Predictor	193
10.1	Introduction . . . . .	193
10.2	Optimal vector linear predictor . . . . .	193
10.3	Linear predictor design from empirical data . . . . .	199
10.4	Predictor based on neural networks . . . . .	202
10.5	Concluding remarks . . . . .	202
11	Design of the Code-book	203
11.1	Introduction . . . . .	203
11.2	Competitive algorithms . . . . .	203
11.3	Preprocessing . . . . .	209
11.4	Selection of initial code-book . . . . .	213
11.5	Concluding remarks . . . . .	216
12	Design of the PVQ Schemes	217
12.1	Introduction . . . . .	217
12.2	Open-loop design . . . . .	218
12.3	Closed-loop design . . . . .	223
12.4	Modified closed-loop design . . . . .	231
12.5	Neural PVQ design . . . . .	235
12.6	Concluding remarks . . . . .	239
III	Recursive Least Squares Methods for Neural Network Learning and their Systolic Implementations	240
13	A Family of the RLS Learning Algorithms	241
13.1	Introduction . . . . .	241
13.2	Notation . . . . .	242
13.3	Problem description . . . . .	245
13.4	RLS learning algorithms . . . . .	249
13.4.1	Single layer neural network . . . . .	249
13.4.2	Multi-layer neural networks . . . . .	254
13.5	QQ-RLS learning algorithms . . . . .	260
13.5.1	Single layer . . . . .	260
13.5.2	Multi-layer neural network . . . . .	264
13.6	UD-RLS learning algorithms . . . . .	266
13.6.1	Single layer . . . . .	266
13.6.2	Multi-layer neural networks . . . . .	270

13.7 Simulation results . . . . .	273
13.7.1 Performance evaluation . . . . .	273
13.8 Concluding remarks . . . . .	280
<b>14 Systolic Implementations of the RLS Learning</b>	
<b>Algorithms</b>	<b>283</b>
14.1 Introduction . . . . .	283
14.2 Systolic architecture for the recall phase . . . . .	285
14.3 Systolic architectures for the ETB RLS learning	
algorithms . . . . .	290
14.4 Systolic architectures for the RLS learning	
algorithms . . . . .	304
14.5 Performance evaluation of systolic architectures . . . .	318
14.5.1 The recall phase . . . . .	318
14.5.2 The learning phase: the ETB RLS	
algorithm . . . . .	320
14.5.3 The learning phase: the RLS algorithm . . . .	322
14.6 Concluding remarks . . . . .	328
<b>Appendix</b>	<b>329</b>
