

Table of Contents

Three Lessons on the Painlevé Property and the Painlevé Equations

<i>M. D. Kruskal, B. Grammaticos, T. Tamizhmani</i>	1
1 Introduction	1
2 The Painlevé Property and the Naive Painlevé Test	2
3 From the Naive to the Poly-Painlevé Test	7
4 The Painlevé Property for the Painlevé Equations	11

Sato Theory and Transformation Groups. A Unified Approach to Integrable Systems

<i>R. Willox, J. Satsuma</i>	17
1 The Universal Grassmann Manifold	17
1.1 The KP Equation	18
1.2 Plücker Relations	20
1.3 The KP Equation as a Dynamical System on a Grassmannian	22
1.4 Generalization to the KP Hierarchy	23
2 Wave Functions, τ -Functions and the Bilinear Identity	24
2.1 Pseudo-differential Operators	24
2.2 The Sato Equation and the Bilinear Identity	25
2.3 τ -Functions and the Bilinear Identity	28
3 Transformation Groups	31
3.1 The Boson-Fermion Correspondence	31
3.2 Transformation Groups and τ -Functions	34
3.3 Bäcklund Transformations for the KP Hierarchy	36
4 Extensions and Reductions	41
4.1 Extensions of the KP Hierarchy	42
4.2 Reductions of the KP Hierarchy	46

Special Solutions of Discrete Integrable Systems

<i>Y. Ohta</i>	57
1 Introduction	57
2 Determinant and Pfaffian	58
2.1 Definition	58
2.2 Linearity and Alternativity	62

2.3	Cofactor and Expansion Formula	71
2.4	Algebraic Identities	72
2.5	Golden Theorem	74
2.6	Differential Formula	76
3	Difference Formulas	77
3.1	Discrete Wronski Pfaffians	77
3.2	Discrete Gram Pfaffians	78
4	Discrete Bilinear Equations	80
4.1	Discrete Wronski Pfaffian	80
4.2	Discrete Gram Pfaffian	80
5	Concluding Remarks	81

Discrete Differential Geometry. Integrability as Consistency

<i>A. I. Bobenko</i>		85
1	Introduction	85
2	Origin and Motivation: Differential Geometry	85
3	Equations on Quad-Graphs. Integrability as Consistency	88
	3.1 Discrete Flat Connections on Graphs	89
	3.2 Quad-Graphs	90
	3.3 3D-Consistency	92
	3.4 Zero-Curvature Representation from the 3D-Consistency . .	94
4	Classification	96
5	Generalizations: Multidimensional and Non-commutative (Quantum) Cases	100
	5.1 Yang-Baxter Maps	100
	5.2 Four-Dimensional Consistency of Three-Dimensional Systems	101
	5.3 Noncommutative (Quantum) Cases	103
6	Smooth Theory from the Discrete One	105

Discrete Lagrangian Models

<i>Yu. B. Suris</i>	111
1 Introduction	111
2 Poisson Brackets and Hamiltonian Flows	112
3 Symplectic Manifolds	115
4 Poisson Reduction	118
5 Complete Integrability	118
6 Lax Representations	119
7 Lagrangian Mechanics on \mathbb{R}^N	121
8 Lagrangian Mechanics on $T\mathcal{P}$ and on $\mathcal{P} \times \mathcal{P}$	123
9 Lagrangian Mechanics on Lie Groups	125
10 Invariant Lagrangians and the Lie–Poisson Bracket	128
10.1 Continuous–Time Case	129
10.2 Discrete–Time Case	131

11	Lagrangian Reduction and Euler–Poincaré Equations on Semidirect Products	134
11.1	Continuous–Time Case	135
11.2	Discrete–Time Case	138
12	Neumann System	141
12.1	Continuous–Time Dynamics	141
12.2	Bäcklund Transformation for the Neumann System	144
12.3	Ragnisco’s Discretization of the Neumann System	147
12.4	Adler’s Discretization of the Neumann System	149
13	Garnier System	150
13.1	Continuous–Time Dynamics	150
13.2	Bäcklund Transformation for the Garnier System	151
13.3	Explicit Discretization of the Garnier System	152
14	Multi–dimensional Euler Top	153
14.1	Continuous–Time Dynamics	153
14.2	Discrete–Time Euler Top	156
15	Rigid Body in a Quadratic Potential	159
15.1	Continuous–Time Dynamics	159
15.2	Discrete–Time Top in a Quadratic Potential	161
16	Multi–dimensional Lagrange Top	164
16.1	Body Frame Formulation	164
16.2	Rest Frame Formulation	166
16.3	Discrete–Time Analogue of the Lagrange Top: Rest Frame Formulation	168
16.4	Discrete–Time Analogue of the Lagrange Top: Moving Frame Formulation	169
17	Rigid Body Motion in an Ideal Fluid: The Clebsch Case	171
17.1	Continuous–Time Dynamics	171
17.2	Discretization of the Clebsch Problem, Case $A = B^2$	173
17.3	Discretization of the Clebsch Problem, Case $A = B$	174
18	Systems of the Toda Type	175
18.1	Toda Type System	175
18.2	Relativistic Toda Type System	177
19	Bibliographical Remarks	179

Symmetries of Discrete Systems

<i>P. Winternitz</i>	185
1 Introduction	185
1.1 Symmetries of Differential Equations	185
1.2 Comments on Symmetries of Difference Equations	191
2 Ordinary Difference Schemes and Their Point Symmetries	192
2.1 Ordinary Difference Schemes	192
2.2 Point Symmetries of Ordinary Difference Schemes	194
2.3 Examples of Symmetry Algebras of $\text{O}\Delta\text{S}$	199

3	Lie Point Symmetries of Partial Difference Schemes	203
3.1	Partial Difference Schemes	203
3.2	Symmetries of Partial Difference Schemes	206
3.3	The Discrete Heat Equation	208
3.4	Lorentz Invariant Difference Schemes	211
4	Symmetries of Discrete Dynamical Systems	213
4.1	General Formalism	213
4.2	One-Dimensional Symmetry Algebras	217
4.3	Abelian Lie Algebras of Dimension $N \geq 2$	218
4.4	Some Results on the Structure of Lie Algebras	220
4.5	Nilpotent Non-Abelian Symmetry Algebras	222
4.6	Solvable Symmetry Algebras with Non-Abelian Nilradicals	222
4.7	Solvable Symmetry Algebras with Abelian Nilradicals	224
4.8	Nonsolvable Symmetry Algebras	224
4.9	Final Comments on the Classification	225
5	Generalized Point Symmetries of Linear and Linearizable Systems	225
5.1	Umbral Calculus	225
5.2	Umbral Calculus and Linear Difference Equations	227
5.3	Symmetries of Linear Umbral Equations	232
5.4	The Discrete Heat Equation	234
5.5	The Discrete Burgers Equation and Its Symmetries	235

Discrete Painlevé Equations: A Review

	<i>B. Grammaticos, A. Ramani</i>	245
1	The (Incomplete) History of Discrete Painlevé Equations	247
2	Detectors, Predictors, and Prognosticators (of Integrability)	253
3	Discrete \mathbb{P} 's Galore	262
4	Introducing Some Order into the d- \mathbb{P} Chaos	268
5	What Makes Discrete Painlevé Equations Special?	274
6	Putting Some Real Order to the d- \mathbb{P} Chaos	282
7	More Nice Results on d- \mathbb{P} 's	300
8	Epilogue	317

Special Solutions for Discrete Painlevé Equations

	<i>K. M. Tamizhmani, T. Tamizhmani, B. Grammaticos, A. Ramani</i>	323
1	What Is a Discrete Painlevé Equation?	324
2	Finding Special-Function Solutions	328
2.1	The Continuous Painlevé Equations and Their Special Solutions	328
2.2	Special Function Solutions for Symmetric Discrete Painlevé Equations	332
2.3	The Case of Asymmetric Discrete Painlevé Equations	338

3	Solutions by Direct Linearisation	345
3.1	Continuous Painlevé Equations	346
3.2	Symmetric Discrete Painlevé Equations	349
3.3	Asymmetric Discrete Painlevé Equations	356
3.4	Other Types of Solutions for d- \mathbb{P} 's	365
4	From Elementary to Higher-Order Solutions	366
4.1	Auto-Bäcklund and Schlesinger Transformations	366
4.2	The Bilinear Formalism for d- \mathbb{P} s	368
4.3	The Casorati Determinant Solutions	370
5	Bonus Track: Special Solutions of Ultra-discrete Painlevé Equations	377

Ultradiscrete Systems (Cellular Automata)

<i>T. Tokihiro</i>	383
1 Introduction	383
2 Box-Ball System	385
3 Ultradiscretization	386
3.1 BBS as an Ultradiscrete Limit of the Discrete KP Equation	386
3.2 BBS as Ultradiscrete Limit of the Discrete Toda Equation	391
4 Generalization of BBS	395
4.1 BBS Scattering Rule and Yang-Baxter Relation	395
4.2 Extensions of BBSs and Non-autonomous Discrete KP Equation	399
5 From Integrable Lattice Model to BBS	405
5.1 Two-Dimensional Integrable Lattice Models and R -Matrices	405
5.2 Crystallization and BBS	408
6 Periodic BBS (PBBS)	412
6.1 Boolean Formulae for PBBS	414
6.2 PBBS and Numerical Algorithm	415
6.3 PBBS as Periodic $A_M^{(1)}$ Crystal Lattice	417
6.4 PBBS as $A_{N-1}^{(1)}$ Crystal Chains	419
6.5 Fundamental Cycle of PBBS	421
7 Concluding Remarks	423

Time in Science: Reversibility vs. Irreversibility

<i>Y. Pomeau</i>	425
1 Introduction	425
2 On the Phenomenon of Irreversibility in Physical Systems	426
3 Reversibility of Random Signals	429
4 Conclusion and Perspectives	435

Index	437
