Part I B-Physics

Theory of Exclusive Hadronic B Decays

<i>Matthias Neubert</i>	3
1 Introduction	3
2 Statement of the Factorization Formula	6
2.1 The Idea of Factorization	6
2.2 The Factorization Formula	7
2.3 Definition of Non-perturbative Parameters	9
3 Arguments for Factorization	10
3.1 Preliminaries and Power Counting	10
3.2 The $B \rightarrow D$ Form Factor	12
3.3 Non-leptonic Decay Amplitudes	13
3.4 Remarks on Final-State Interactions	16
4 $B \rightarrow D\pi$: Factorization at One-Loop Order	18
4.1 Effective Hamiltonian and Decay Topologies	18
4.2 Soft and Collinear Cancellations at One-Loop Order	19
4.3 Matrix Elements at Next-to-Leading Order	23
5 Power-Suppressed Contributions	26
5.1 Interactions with the Spectator Quark	26
5.2 Annihilation Topologies	27
5.3 Non-leading Fock States	28
6 Difficulties with Charm	31
7 Phenomenology of $B \rightarrow D^{(*)}L$ Decays	32
7.1 Non-leptonic Decay Amplitudes	32
7.2 Meson Distribution Amplitudes and Predictions for a_1	33
7.3 Tests of Factorization	35
7.4 Predictions for Class-I Decay Amplitudes	37
8 Conclusion	40

B Physics and CP Violation

<i>Robert Fleischer</i>	42
1 Introduction	42
2 CP Violation in the Standard Model	43
2.1 Charged-Current Interactions of Quarks	43
2.2 Wolfenstein Parametrization	44

2.3	Unitarity Triangles	44
2.4	Standard Analysis of the Unitarity Triangle	45
2.5	Quantitative Studies of CP Violation	46
3	Non-leptonic B Decays	48
3.1	Classification	48
3.2	Low-Energy Effective Hamiltonians	48
3.3	Factorization of Hadronic Matrix Elements	51
4	Towards Studies of CP Violation in the B System	52
4.1	Amplitude Structure and Direct CP Violation	52
4.2	Classification of the Main Strategies	53
5	Benchmark Modes for the B Factories	56
5.1	The “Gold-Plated” Mode $B_d \rightarrow J/\psi K_S$	56
5.2	The $B \rightarrow \phi K$ System	58
5.3	The Decay $B_d \rightarrow \pi^+ \pi^-$	59
6	The B_s -Meson System	61
6.1	General Features	61
6.2	Benchmark B_s Decays	63
7	Recent Developments	64
7.1	Status of $B \rightarrow \pi K$ Decays	64
7.2	The $B_d \rightarrow \pi^+ \pi^-$, $B_s \rightarrow K^+ K^-$ System	68
8	Remarks on the “Usual” Rare B Decays	72
9	Conclusions and Outlook	72

Theory of Rare B Decays: $b \rightarrow s\gamma$ and $b \rightarrow s\ell^+\ell^-$

<i>Thomas Mannel</i>	78
1 Introduction: \mathcal{H}_{eff} for $b \rightarrow s\gamma$ and $b \rightarrow s\ell^+\ell^-$	78
2 Perturbative Corrections to $b \rightarrow s\gamma$	80
3 Non-perturbative Corrections to $b \rightarrow s\gamma$	81
3.1 $B \rightarrow J/\psi X_s \rightarrow X_s \gamma$	82
3.2 $1/m_b$ and $1/m_c$ Corrections	82
3.3 Non-perturbative Corrections in the Photon Energy Spectrum ...	83
4 “New Physics” in $b \rightarrow s\gamma$	85
4.1 Two-Higgs-Doublet Model (Type II)	86
4.2 Supersymmetry with Large $\tan\beta$	88
5 Summary on $b \rightarrow s\gamma$	90
6 The Inclusive Decay $B \rightarrow X_s \ell^+ \ell^-$	90
6.1 Differential Rate and Forward-Backward Asymmetry	90
6.2 Model Independent Analysis of New Physics Effects in $B \rightarrow X_s \ell^+ \ell^-$ and $B \rightarrow X_s \gamma$	92
7 Conclusions	96

Heavy Quarks on the Lattice

<i>Craig McNeile</i>	100
1 Introduction	100
2 A Brief Introduction to Numerical Lattice QCD	101
2.1 Fermion Actions for Light Quarks	104

3	The Different Ways of Treating Heavy Quarks on the Lattice	106
3.1	The Improvement View	107
3.2	The Static Limit of QCD	108
3.3	Nonrelativistic QCD	108
3.4	Anisotropic Lattices	110
3.5	The Hyperfine Splitting in Charmonium	111
4	Case Study: Calculating the Charm Mass from Lattice QCD	115
4.1	Quark Mass Renormalization Factors	117
4.2	Evolving the Quark Mass to a Reference Scale	118
4.3	Comparison of the Results	118
5	The f_B Decay Constant	118
5.1	Computation of Form Factors from Lattice QCD	121
6	Nonleptonic Decays	122
7	Conclusions	123

BaBar Experiment Status and Recent Results

	<i>Guglielmo De Nardo, representing the BaBar Collaboration</i>	129
1	Introduction	129
2	The BaBar Detector	129
3	Time Dependent CP Asymmetries	131
3.1	Selection of the CP Sample	132
3.2	B Flavor Tagging and Δt Resolution	133
4	Measurement of the CP-Violating Asymmetry Amplitude $\sin 2\beta$	135
5	Measurement of the CP Violating Amplitude $\sin 2\alpha$	138
5.1	Sample Selection of the Charmless Decays $B^0 \rightarrow h^+ h^-$	140
5.2	CP Asymmetries and Branching Fractions Measurement of the Charmless Decays	142
6	Conclusions	144

Part II Modelling QCD

Unifying Aspects of Light- and Heavy-Systems

	<i>Craig D. Roberts</i>	149
1	Introduction	149
2	Dyson-Schwinger Equations	151
2.1	Gap Equation	151
2.2	Nonperturbative Truncation	152
2.3	Systematic Procedure	154
2.4	Selected Model-Independent Results	161
3	Basis for a Description of Mesons	165
3.1	Rainbow Gap Equation	165
3.2	Comparison with Lattice Simulations	167
3.3	<i>Ab Initio</i> Calculation of Meson Properties	168
3.4	Heavier Mesons	169

4	Heavy Quarks	170
4.1	Features of the Mass Function	170
4.2	Leptonic Decays	173
4.3	Heavy-Meson Masses	174
4.4	Semileptonic Transition Form Factors	175
4.5	Impulse Approximation	177
4.6	Additional Decay Processes	179
4.7	Heavy-Quark Symmetry Limits	179
4.8	Survey of Results for Light- and Heavy-Meson Observables	180
5	Epilogue	184

An Introduction to 5-Dimensional Extensions of the Standard Model

<i>Alexander Mück, Apostolos Pilaftsis, Reinhold Rückl</i>		189
1	Introduction	189
2	5-Dimensional Abelian Models	191
3	5-Dimensional Extensions of the Standard Model	200
4	Effects on Electroweak Observables	204
5	Conclusions	208

One-Loop Corrections to Polarization Observables

<i>J.G. Körner, M.C. Mauser</i>		212
1	Introduction	212
2	Miscellaneous Remarks on Polarization Effects	215
2.1	Examples of 100% Polarization	215
2.2	Examples of Zero Polarization	217
2.3	Mass Effects	219
2.4	Some Polarization Measures Are <i>NLO</i> Effects	220
2.5	Presentation of <i>NLO</i> Results of Polarization Observables	221
3	Fierz Transformation	221
4	Counting Spin Observables	222
5	Angular Decay Distributions	226
6	One-Loop Amplitude	231
7	Tree-Graph Contribution	232
8	<i>NLO</i> Radiative Corrections to $e^+e^- \rightarrow t\bar{t}(g)$ in the Soft Gluon Approximation	235
9	Unpolarized Top Decay $t \rightarrow b + W^+$	236
10	The Decay $t(\uparrow) \rightarrow b + H^+$	237
11	Goldstone Equivalence Theorem	239
12	Leptonic Decays of the μ and the τ and Anomalous Helicity Flip Contributions	240
13	Summary and Concluding Remarks	241

Exclusive Rare Decays of B and B_c Mesons in a Relativistic Quark Model

<i>M.A. Ivanov, V.E. Lyubovitskij</i>		245
1	Introduction	245

2	Effective Hamiltonian	247
3	Form Factors and Differential Decay Distributions	249
4	Helicity Amplitudes and Two-Fold Distributions	250
5	The Four-Fold Angle Distribution in the Cascade Decay $B_c \rightarrow D^*(\rightarrow D\pi)\bar{l}l$	254
6	Model Form Factors	257
7	Numerical Results	262

Spectroscopy of Baryons Containing Two Heavy Quarks

<i>I.M. Narodetskii, M.A. Trusov</i>	264
1 Introduction	264
2 The Effective Hamiltonian in QCD	264
3 Solving the Three Quark Equation	267
3.1 Jacobi Coordinates	267
3.2 String Junction Point	268
3.3 Hyper Radial Approximation	269
3.4 Quasi Classical Solution	270
3.5 Variational Solution	270
4 Quark Dynamical Masses	271
5 Doubly Baryon Masses	272
6 Conclusions	273

Extraction of the Strong Coupling Constant and Strange Quark Mass from Semileptonic τ Decays

<i>Alexei A. Pivovarov</i>	275
1 Definition of QCD Parameters α_s and m_s	275
2 Kinematics of Semileptonic τ Decays	277
3 PT Analysis in QCD	278

Exclusive Nonleptonic B Decays from QCD Light-Cone Sum Rules

<i>Blaženka Melić</i>	287
1 Exclusive Nonleptonic B Decays and Factorization	287
1.1 Nonfactorizable Contributions	289
1.2 Models for the Calculation of Nonfactorizable Contributions	290
2 Light-Cone Sum Rules	291
2.1 Light-Cone Sum Rules <i>vs</i> SVZ Sum Rules	291
3 Nonfactorizable Effects in the Light-Cone Sum Rules	293
3.1 Definitions	293
3.2 Procedure	294
3.3 Results and Implications in the $B \rightarrow \pi\pi$ Decay	294
4 Nonfactorizable Effects for $B \rightarrow J/\psi K$	296
4.1 Light-Cone Sum Rule Calculation	298
4.2 Results and Implications	299
5 Conclusions	300

Part III Production of Heavy Flavors

**Heavy Flavor Production off Protons
and in a Nuclear Environment**

<i>B.Z. Kopeliovich, J. Raufeisen</i>	305
1 Introduction	305
2 The Foundations of the Color Dipole Approach to High Energy Scattering	307
3 The Phenomenological Dipole Cross Section	310
4 Diffractive Photoproduction of Charmonia off Protons	312
4.1 Charmonium Wave Functions	314
4.2 Comparison with Data	317
4.3 Importance of Spin Effects for the ψ' to J/ψ Ratio	318
4.4 Charmonium-Nucleon Total Cross Sections	318
5 Nuclear Effects in Exclusive Leptoproduction of Charmonia	319
5.1 Eikonal Shadowing Versus Absorption for $c\bar{c}$ Pairs in Nuclei	320
5.2 Gluon Shadowing	323
6 Hadroproduction of Heavy Quarks	327
6.1 Numerical Results for Hadroproduction of Heavy Quarks	332
7 Nuclear Effects in Hadroproduction of Open Charm	335
7.1 Higher Twist Shadowing for $c\bar{c}$ Production	337
7.2 Process Dependent Gluon Shadowing	338
7.3 Numerical Results	340
8 The Light-Cone Dipole Formalism for Charmonium Production off a Nucleon	342
9 Charmonium Hadroproduction off Nuclei	345
9.1 Interplay of Formation and Coherence Time Scales and Related Phenomena	347
9.2 Higher Twist Nuclear Effects	349
9.3 Leading Twist Gluon Shadowing	353
9.4 LC Dipole Representation for the Reaction $GN \rightarrow \chi GX$	354
9.5 Gluon Shadowing for χ Production off Nuclei	355
9.6 Antishadowing of Gluons	358
9.7 Comparison with Available Data and Predictions for Higher Energies	358
10 Summary	359

Heavy Mesons and Impact Ionization of Heavy Quarkonia

<i>David Blaschke, Yuri Kalinovsky, Valery Yudichev</i>	366
1 Introduction	366
2 Quantum Kinetics for Quarkonium in a Plasma	367
3 Quarkonium Dissociation Cross Section in a Gluon Gas	368
3.1 Quarkonia Abundances and Observable Signatures	370
4 Quark Impact, $T > T_c$	371
5 Conclusions	374

Deep Inelastic J/ψ Production at HERA in the Colour Singlet Model with k_T -Factorization

<i>A. Lipatov, N. Zotov</i>	376
1 Introduction	376
2 Details of the Calculations	378
3 Numerical Results and Discussion	379
4 Conclusions	383

The Structure Functions F_2^c , F_L and F_L^c in the Framework of the k_T Factorization

<i>A.V. Kotikov, A.V. Lipatov, G. Parente, N.P. Zotov</i>	386
1 Introduction	386
2 Hard Structure Functions	388
3 Relations Between F_L , F_2 and Derivation of F_2 in the Case of Collinear Approximation	389
4 Comparison with F_2^c and F_L Experimental Data and Predictions for F_L^c	391
5 Conclusions	395

J/ψ and D^* Mesons Photoproduction at HERA

<i>V.A.Saleev, D.V.Vasin</i>	401
1 Hard Processes in the Parton Model and k_T -Factorization Approach ..	401
2 D^* Meson Photoproduction in LO QCD	403
3 D^* Meson Photoproduction at HERA	405
4 J/ψ Photoproduction in LO QCD	408
5 J/ψ Photoproduction at HERA	412

Measurement of the $b\bar{b}$ Production Cross Section in 920 GeV Fixed-Target Proton-Nucleus Collisions at the HERA-B Detector

<i>Alexander Lanyov for the HERA-B Collaboration</i>	418
1 Introduction	418
2 The Experimental Setup	419
3 The Method of Measurement	420
4 Prompt J/ψ Selection	421
5 Detached Vertex Analysis	422
6 Combined Cross Section Measurement	424
7 Conclusion	425

Charmonium Production in 920 GeV Proton-Nucleus Interactions

<i>Roman Mizuk for the HERA-B Collaboration</i>	427
1 Introduction	427
2 Detector, Trigger and Data Sample	428
3 Monte Carlo Simulation	429
4 Data Analysis	430
4.1 J/ψ Selection	430

XIV Contents

4.2	χ_c Selection	433
5	Result for R_{χ_c}	436
6	Conclusions	437

Heavy Quark Physics

Blaschke, D.; Ivanov, M.A.; Mannel, Th. (Eds.)

2004, XVII, 440 p., Hardcover

ISBN: 978-3-540-21921-7
