

Contents

1	Introduction	1
2	The Symmetry of Electromagnetism with Respect to Electric and Magnetic Charges	7
2.1	The Symmetry between Electric and Magnetic Charges at the Level of the Maxwell Equations	7
2.2	Electromagnetism Expressed in Terms of the Gauge Field A^μ Associated to the Field Tensor $F^{\mu\nu}$	9
2.3	The Current and World Line of a Charged Particle	12
2.4	The World Sheet Swept Out by a Dirac String in Minkowski Space	13
2.5	The Dirac String Joining Equal and Opposite Magnetic Charges	16
2.6	Dirac Strings with a Constant Orientation	17
2.7	The Vector Potential \vec{A} in the Vicinity of a Magnetic Monopole	19
2.8	The Irrelevance of the Shape of the Dirac String	21
2.9	Deformations of Dirac Strings and Charge Quantization	23
2.10	The Way Dirac Originally Argued for the String	26
2.11	Electromagnetism Expressed in Terms of the Gauge Field B^μ Associated to the Dual Field Tensor $\bar{F}^{\mu\nu}$	27
3	The Landau-Ginzburg Model of a Dual Superconductor	33
3.1	The Landau-Ginzburg Action of a Dual Superconductor	34
3.2	The Landau-Ginzburg Action in Terms of Euclidean Fields	36
3.3	The Flux Tube Joining Two Equal and Opposite Electric Charges	37

3.3.1	The Ball-Caticha Expression of the String Term	38
3.3.2	Deformations of the String and Charge Quantization	40
3.3.3	The Relation Between the Dirac String and the Flux Tube in the Unitary Gauge	41
3.3.4	The Flux Tube Calculated in the Unitary Gauge	42
3.3.5	The Electric Field and the Magnetic Current	45
3.3.6	The Abrikosov-Nielsen-Olesen Vortex	46
3.3.7	Divergencies of the London Limit	47
3.4	Comparison of the Landau-Ginzburg Model with Lattice Data	48
3.5	The Dielectric Function of the Color-Dielectric Model	51
3.6	The London Limit of the Landau-Ginzburg Model	53
3.6.1	The Gluon Propagator	55
3.6.2	The Energy in the Presence of Static Electric Charges in the London Limit	56
3.6.3	The Confining Potential in the London Limit	56
3.6.4	Chiral Symmetry Breaking	58
3.7	The Field-Strength Correlator	58
3.8	The London Limit Expressed in Terms of a Kalb-Ramond Field	62
3.8.1	The Double Gauge Invariance	62
3.8.2	The Duality Transformation	64
3.8.3	The Quantification of the Massive Kalb-Ramond Field	65
3.8.4	The Elementary Excitations	67
3.8.5	The Nambu Hierarchy of Gauge Potentials	68
3.9	The Hamiltonian of the Landau-Ginzburg Model	69
3.10	The Elementary Excitations of the Landau-Ginzburg Model	70
3.11	The Two-Potential Zwanziger Formalism	72
3.11.1	The Field Tensor $F^{\mu\nu}$ Expressed in Terms of Two Potentials A^μ and B^μ	72
3.11.2	The Zwanziger Action Applied to a Dual Superconductor	74
3.11.3	Elimination of the Gauge Potential A^μ	75
4	Abelian Gauge Fixing	79
4.1	The Occurrence of Monopoles in an Abelian Gauge	81
4.1.1	The Magnetic Charge of a $SU(2)$ Monopole	81

4.1.2	The Magnetic Charges of $SU(3)$ Monopoles	84
4.2	The Maximal Abelian Gauge and Abelian Projection	88
4.3	Abelian and Center Projection on the Lattice	90
5	The Confinement of $SU(3)$ Color Charges	93
5.1	An Abelian $SU(3)$ Landau-Ginzburg Model	93
5.1.1	The Model Action and Its Abelian Gauge Invariance	93
5.2	The Coupling of Quarks to the Gluon Field	96
5.3	The Energy of Three Static (Quark) Charges	98
5.4	Quantization of the Electric and Magnetic Charges	100
5.5	Flux Tubes Formed by the Electric and Magnetic Fields . . .	101
5.6	A Weyl Symmetric Form of the Action	103
Appendix		
A	Vectors, Tensors, and Their Duality Transformations	109
A.1	Compact Notation	109
A.2	The Metric $g^{\mu\nu}$ and the Antisymmetric Tensor $\varepsilon^{\mu\nu\alpha\beta}$	110
A.3	Vectors and Their Dual Form	110
A.3.1	Longitudinal and Transverse Components of Vectors	111
A.3.2	Identities Involving Vectors	111
A.3.3	Identities Involving Vectors and Antisymmetric Tensors	112
A.4	Antisymmetric Tensors and Their Dual Form	113
A.4.1	The Dual of an Antisymmetric Tensor	113
A.4.2	The Zwanziger Identities	113
A.4.3	Longitudinal and Transverse Components of Antisymmetric Tensors	115
A.5	Antisymmetric and Dual 3-Forms	116
A.6	Three-Dimensional Euclidean Vectors	118
A.6.1	Cartesian Coordinates	121
A.6.2	Cylindrical Coordinates	121
A.6.3	Spherical Coordinates	122
B	The Relation between Minkowski and Euclidean Actions	125
C	The Generators of the $SU(2)$ and $SU(3)$ Groups	129
C.1	The $SU(2)$ Generators	129
C.2	The $SU(3)$ Generators and Root Vectors	129
C.3	Root Vectors of $SU(3)$	131

D Color Charges of Quarks and Gluons	133
D.1 $SU(2)$ Color Charges	133
D.2 $SU(3)$ Color Charges	134
Bibliography	137

Dual Superconductor Models of Color Confinement

Ripka, G.

2004, VIII, 140 p., Hardcover

ISBN: 978-3-540-20718-4
