## Contents

<b>1</b>	<b>Problems and Examples</b>	3
1.1	Vibrations of Perfectly Flexible Rods	3
1.2	Torsional vibrations of rods	16
1.3	Extensional vibrations of rods	17
1.4	Bending vibrations of rectilinear rods	25
1.5	Vibrations of rectilinear and curvilinear rods	33
<b>2</b>	<b>Answers and solutions</b>	43
2.1	Vibrations of Perfectly Flexible Rods	43
2.2	Torsional vibrations of rods	87
2.3	Extensional vibrations of rods	91
2.4	Bending vibrations of rectilinear rods	112
2.5	Vibrations of rectilinear and curvilinear rods	130
	<b>References</b>	179
<b>A</b>	<b>Statics of rods: basic equations</b>	181
A.1	Derivation of nonlinear equations of rod equilibrium	182
A.2	Transformations of base vectors	184
A.3	Derivatives of base vectors with respect to arc coordinate $s$	189
A.4	Equations relating $\mathbf{a}_j$ to angles $\vartheta_k$	192
A.5	Vector equation of displacements of points of the rod axial line	194
A.6	Equation connecting the vectors $\overline{\mathbf{M}}$ and $\overline{\mathbf{a}}$	195
A.7	System of nonlinear equations of rod equilibrium	196
A.8	Reduction of equations to dimensionless notation	197
A.9	Boundary conditions	198
A.10	External load and its behaviour under rod loading process	199
A.11	Vector nonlinear equations of rod equilibrium in the bound coordinate system	201
A.12	Equations of rod equilibrium in projections onto bound axes	202
A.13	Special cases of equilibrium equations	203

<b>B</b>	<b>Basic equations of rod kinematics</b> . . . . .	209
B.1	Time derivatives of vectors of the base $\{\bar{\mathbf{e}}_i\}$ . . . . .	209
B.2	Absolute and local derivatives of a vector with respect to time . . . . .	211
B.3	Velocity and acceleration of a point of the rod axial line . . . . .	212
<b>C</b>	<b>Basic equations of rod dynamics</b> . . . . .	215
C.1	Nonlinear vector equations of motion of three-dimensional curvilinear rods . . . . .	215
C.2	Reduction of equations to dimensionless form . . . . .	218
C.3	Equations of small vibrations of rods (linear equations) . . . . .	219
C.4	Equations of small vibrations in projections onto bound axes . . . . .	221
C.5	Equations of small vibrations of a rod whose axial line in the unloaded state is a plane curve . . . . .	222
<b>D</b>	<b>Exact numerical method of determining the frequencies and modes of rod vibrations</b> . . . . .	225
D.1	Determination of eigen values (frequencies) . . . . .	225
D.2	Determination of eigen functions for conservative problems . . . . .	228
<b>E</b>	<b>Approximate numerical determination of frequencies at small vibrations of rods</b> . . . . .	231
<b>F</b>	<b>Approximate solution of equation of rod forced vibrations</b> . . . . .	237
