

Contents

Planning Motions for Robotic Systems Subject to Differential Constraints	1
<i>Alessandro De Luca, Giuseppe Oriolo, Marilena Vendittelli, Stefano Iannitti</i>	
1 Introduction	1
2 Modeling	3
3 Planning for Non-Flat Kinematic Systems	7
4 Planning for Flat Dynamic Systems	20
5 Conclusion	34
 Comparison and Improvement of Control Schemes for Robotic Teleoperation Systems with Time Delay	39
<i>Paolo Arcara, Claudio Melchiorri</i>	
1 Introduction	39
2 Basic Definitions and Control Schemes	40
3 Comparison Criteria and Results	45
4 The IPC	49
5 Conclusion	59
 Measuring and Improving Performance in Anti-Windup Laws for Robot Manipulators	61
<i>Federico Morabito, Salvatore Nicosia, Andrew R. Teel, Luca Zaccarian</i>	
1 Introduction	61
2 Problem Data	63
3 A Nonlinear Anti-Windup Solution	65
4 Measuring and Improving the Anti-Windup Performance	68
5 Anti-Windup Construction Examples	71
6 Conclusion	84
 Model-Based Friction Compensation	87
<i>Gianni Ferretti, Gianantonio Magnani, Paolo Rocco</i>	
1 Introduction	87
2 Identification and Validation of the Model	94
3 Friction Compensation: Experimental Results	96
4 Conclusion	98
 Architectures for Rapid Prototyping of Model-Based Robot Controllers	101
<i>Basilio Bona, Marina Indri, Nicola Smaldone</i>	
1 Introduction	101
2 Rapid Prototyping	103
3 The Prototyping Environment	112
4 Description of a Test Case: Prototyping a Model-Based Compensation of Nonlinear Joint Friction	117
5 Conclusion	122

Real-Time Visual Tracking of 3D Objects	125
<i>Fabrizio Caccavale, Vincenzo Lippiello, Bruno Siciliano, Luigi Villani</i>	
1 Introduction	125
2 Modelling	127
3 Kalman Filtering	129
4 BSP Tree Geometric Modelling	130
5 Features Selection	133
6 Estimation Procedure	138
7 Experiments	139
8 Conclusion	148
 RTLinux-Based Controller for the SuperMARIO Mobile Robot	153
<i>Claudio Bellini, Stefano Panzieri, Federica Pascucci, Giovanni Ulivi</i>	
1 Introduction	153
2 The New SuperMARIO Mobile Robot	154
3 The Motor Interface	154
4 The Motor Control Algorithm	160
5 The RTLinux Architecture	163
6 RTLinux Control Architecture and Communication Protocol	165
7 Timing Accuracy Experiments	168
8 Conclusion	168
 Coordination and Control of Multiarm Nonholonomic Mobile Manipulators	171
<i>Giuseppe Casalino, Alessio Turetta</i>	
1 Introduction	171
2 Control of a Fixed-Base Single Arm with Singularity Avoidance	173
3 Control of a Single-Arm Nonholonomic Mobile Manipulator	176
4 Control of a Dual-Arm Nonholonomic Mobile Manipulator	179
5 Object Manipulation via Dual-Arm Nonholonomic Mobile Manipulator ..	182
6 Simulation Results	184
7 Conclusion	185
 Methods and Algorithms for Sensor Data Fusion Aimed at Improving the Autonomy of a Mobile Robot	191
<i>Andrea Bonci, Gianluca Ippoliti, Leopoldo Jetto, Tommaso Leo, Sauro Longhi</i>	
1 Introduction	191
2 The Sensory Equipment	195
3 Estimation of Robot Location by Kalman Filter	199
4 Ultrasonic and Video Data Fusion for Map Building	209
5 Conclusion	218

On the Problem of Simultaneous Localization, Map Building, and Servoing of Autonomous Vehicles	223
<i>Antonio Bicchi, Federico Lorussi, Pierpaolo Murrieri, Vincenzo Scordio</i>	
1 Introduction	223
2 Modeling of the SLAMS Problem	224
3 Approaches to the SLAM Problem	226
4 Solvability and Optimization of SLAM	230
5 Simultaneous Localization and Servoing	236
6 Conclusion	239

Advances in Control of Articulated and Mobile Robots

Siciliano, B.; de Luca, A.; Melchiorri, C.; Casalino, G.

(Eds.)

2004, XV, 242 p., Hardcover

ISBN: 978-3-540-20783-2
