

Table of contents

Introduction: Regulatory processes, an emerging feature in intracellular membrane traffic.....	1
Sirkka Keränen and Jussi Jääntti	1
Vesicle budding.....	3
Vesicle targeting – regulation by Rab GTPases	4
Tethering complexes	4
SM proteins	5
Regulation of SNARE assembly by protein phosphorylation	6
Phosphoinositides in membrane traffic	6
Regulation of <i>de novo</i> membrane formation	6
References	7
Molecular mechanisms in clathrin-mediated membrane budding.....	9
Brigitte Ritter and Peter S. McPherson	9
Abstract	9
1 Cellular sites of clathrin-mediated membrane budding	9
2 Formation of endocytic CCVs.....	10
3 Machinery for CCV formation at the cell surface	14
3.1 Role of clathrin	14
3.2 Role of AP-2.....	15
3.3 Role of endocytic accessory proteins.....	18
3.4 Interactions of endocytic accessory proteins with AP-2	23
4 Clathrin trafficking at the TGN.....	26
4.1 AP-1 and GGA adaptor complexes.....	26
4.2 Structural analysis of the γ -ear and GAE domain	28
4.3 Enthoprotin (Clint/epsinR): identification of a novel γ -ear/GAE domain-binding consensus motif	29
5 Concluding remarks	30
Acknowledgments	31
References	31
Regulating membrane curvature	39
Joost C. M. Holthuis	39
Abstract	39
1 Introduction	39
2 Topological considerations.....	40
3 Extrinsic forces affecting membrane curvature.....	42
3.1 Cytoskeleton	42
3.2 Adhesion to curved particles.....	44
3.3 Coat assembly.....	44
4 Intrinsic forces affecting membrane curvature	46

4.1 Transbilayer area asymmetry	46
4.2 Transbilayer curvature asymmetry	52
4.3 Lipid domain-induced curvature	56
5 Concluding remarks	57
Acknowledgements	57
References	58
Functions of Rab GTPases in organelle biogenesis	65
Christopher G. Burd and Ruth N. Collins	65
Abstract	65
1 General considerations	65
2 The GTPase cycle	66
2.1 Structural features of Rab	68
2.2 Prenylation and localization of Rab GTPases	70
3 Regulation of inter-organelle trafficking and organelle transport	71
3.1 Cargo sorting and vesicle budding	71
3.2 Regulation of membrane tethering and fusion	73
3.3 Rabs and membrane microdomains	75
3.4 Organelle transport	76
3.5 The roles of Rab GTPases in signaling pathways	77
4 Rab proteins in disease and development	78
5 Perspective	78
Acknowledgements	80
References	80
Tethering proteins in membrane traffic	89
Sarah Chu and Wei Guo	89
Abstract	89
1 Introduction	89
2 Tethering proteins in various traffic stages	91
2.1 TRAPP	91
2.2 p115	93
2.3 Uso1p	94
2.4 The COG complex	95
2.5 The exocyst	96
2.6 EEA1	98
2.7 HOPS	100
2.8 The GARP/VFT complex	101
3 Postulated functions of the tethering proteins	102
4 Emerging common features of the tethering proteins	103
5 Regulations of the tethering proteins	105
6 Tethering proteins and sorting	105
7 Future studies	106
Acknowledgment	106
References	106

The function of Sec1/Munc18 proteins - Solution of the mystery in sight?	115
Maria Kauppi, Jussi Jääntti, and Vesa M. Olkkonen	115
Abstract	115
1 Introduction	115
2 Genetic studies indicate an essential positive function for SM proteins in vesicle transport.....	117
2 Genetic studies indicate an essential positive function for SM proteins in vesicle transport.....	118
3 The structure of SM proteins	120
4 SM proteins display different binding modes to SNARE molecules	121
5 Are the data suggesting an inhibitory role for SM proteins physiologically relevant?.....	123
6 At what stage of the vesicle tethering-docking-fusion process do SM proteins exert their effects?	125
7 Evidence for a role of SM proteins in transport and stability of syntaxins	127
8 Protein phosphorylation regulates interactions of SM proteins with syntaxins.....	128
9 Non-syntaxin interaction partners of SM proteins.....	129
9.1 Interactions of SM proteins with transport vesicle tethering complexes	129
9.2 Interaction partners that regulate the SM protein-syntaxin association.....	131
9.3 The Mint proteins.....	133
10 Do the SM proteins share a conserved function despite the different modes of interaction with SNAREs?.....	134
Acknowledgements	135
References	135
 Regulation of SNARE assembly by protein phosphorylation.....	145
Adina Weinberger and Jeffrey E. Gerst	145
Abstract	145
1 Introduction	145
2 Phosphorylation and control of the exocytic machinery	147
2.1 Mammalian syntaxins	147
2.2 Yeast syntaxins	151
2.3 <i>Arabidopsis</i> syntaxin.....	152
2.4 SNAP-25 and SNAP-23.....	152
2.5 VAMP/Synaptobrevins	155
2.6 SM Proteins	155
2.7 Synaptotagmin	157
3 Protein phosphorylation in the endocytic pathway.....	158
3.1 Yeast Tlg1,2 and Vps45.....	158
3.2 VAMP4.....	159
3.3 Rabs 4 and 5.....	159

4 Protein phosphorylation in the early secretory pathway	160
5 Conclusions	161
Acknowledgments	162
References	162
Phosphoinositides and membrane traffic in health and disease	171
Anna Godi, Antonella Di Campli, and Maria Antonietta De Matteis	171
Abstract	171
1 PIs metabolism	171
2 The PI kinases: their subcellular localization and role in the secretory pathway	173
2.1 The PtdIns 3-kinases	173
2.2 The PtdIns 4-kinases	175
2.3 The PtdIns monophosphate kinases	177
3 The PI phosphatases: localization and function in the secretory pathway	179
3.1 The PI 3-phosphatases	179
3.2 The PI 4-phosphatases	181
3.3 The PI 5-phosphatases	181
4 PI metabolism and disease	182
4.1 PTEN and human cancers	182
4.2 Myotubular myopathy and Charcot-Marie-Tooth disease	183
4.3 Lowe syndrome	184
5 Conclusions	185
Acknowledgements	185
References	185
Regulation of exocytotic events by centrosome-analogous structures	193
Christof Taxis and Michael Knop	193
Abstract	193
1 MTOCs: a brief overview	193
2 Spindle pole bodies and plasma membrane biogenesis in yeast meiosis	195
2.1 PSM initiation	196
2.2 Growth and shaping of the PSM	199
2.3 Closure of the PSM	200
3 The IMC in <i>Apicomplexa</i>	200
4 Centrioles, basal bodies and plasma membrane	204
5 Conclusion	204
Acknowledgement	205
References	205
Index	209

Regulatory Mechanisms of Intracellular Membrane
Transport

Keränen, S.; Jäntti, J. (Eds.)

2004, X, 214 p., Hardcover

ISBN: 978-3-540-22302-3
