Cell Death Suppressors Encoded by Cytomegalovirus

V.S. Goldmacher

1	Introduction	1
2	vICA, a Cell-Death Suppressor That Blocks Caspase-8 Activation	2
2.1	Cell-Death Suppressing Activity of vICA	2
2.2	vICA Prevents Caspase-8 Activation and Forms a Complex with Pro-Caspase-8	2
2.3	Homologues of vICA in Other β -Herpesviruses	3
3	vMIA, a Cell-Death Suppressor Targeting Mitochondria	5
3.1	Cell-Death Suppressing Activity of vMIA	5
3.2	Intracellular Localization of <i>UL37</i> Protein Products	5
3.3	Impact of vMIA on Apoptotic Signaling Pathways	6
3.4	Interaction of vMIA with Adenine Nucleotide Translocator	6
3.5	Sequence-Function Analysis of vMIA	7
3.6	A Hypothetical Mechanism of Cell-Death Suppression by vMIA	7
3.7	Homologues of <i>UL37</i> Gene Products Encoded by β -Herpesviruses	8
4	Evidence That There Are Other Cell-Death Suppressing Mechanisms Employed by Cytomegaloviruses	9
4.1	Immediate Early Genes <i>IE1</i> and <i>IE2</i> of Human CMV	9
4.2	A Ribonucleotide Reductase Homologue of Mouse CMV	10
4.3	Induction of NF- κ B, a Transcription Factor Capable of Suppressing Apoptosis During CMV Infection	10
4.4	Possible Sequestration of p53 During CMV Infection	10
5	Cell-Death Suppressing Activities of vICA and vMIA During CMV Replication	11
5.1	Expression of vICA and vMIA in Virally Infected Cells	11
5.2	The Anti-apoptotic Function of vICA Is Dispensable	11
5.3	The Anti-apoptotic Function of vMIA Appears to Be Indispensable	12
5.4	Involvement of vMIA and vICA in Suppression of Apoptosis During CMV Infection	12

6	A Speculation on Possible Strategies Employed by β -Herpesviruses to Suppress Apoptosis	13
7	vMIA as a Promising Target for Drug Development	15

Apoptosis Regulator Genes Encoded by Poxviruses

M. Barry, S.T. Wasilenko, T.L. Stewart and J.M. Taylor

1	Introduction	19
1.1	Poxviruses and Apoptosis	20
2	Interference with Death Receptor Signaling	21
2.1	TNF Receptor Decoys	21
2.2	Poxvirus vFLIPS	23
2.3	Myxoma Virus Leukemia-Associated Protein (MV-LAP)	24
3	Poxvirus-Encoded Caspase Inhibitors	25
3.1	Poxvirus SERPINS	25
3.2	Poxvirus-Encoded IAP Molecules	26
4	p28/NIR	27
5	Modulation of Mitochondria	28
5.1	Inhibitors of Cytochrome c Release	28
5.2	Bax-Inhibitor 1	30
6	Anti-oxidant MC066L	30
7	Conclusions	30
	References	32

T-Cell-Mediated Control of Poxvirus Infection in Mice

A. Müllbacher and R.V. Blanden

1	Introduction	39
2	Role of CD8 ⁺ T Cells in Recovery from Mousepox	40
3	Function of CD8 ⁺ T Cells in Apoptosis	43
3.1	Cytokines Released by Tc Cells	43
3.2	Cytotoxicity	45
3.2.1	The Fas Pathway of Cytotoxicity and the Effect of Poxvirus-Encoded Serpins	45
3.2.2	The Exocytosis-Mediated Cytolytic Pathway	47
4	Conclusions	50
	References	51

Switching On and Off the Cell Death Cascade: African Swine Fever Virus Apoptosis Regulation

B. Hernáez, J.M. Escribano and C. Alonso

1	African Swine Fever Virus	57
2	Virus Interactions with the Host Cell	58

2.1	Apoptotic Cell Death in the Macrophage Target Cell	58
2.2	Deadly Virus–Cell Interactions	59
3	Apoptosis in ASFV Pathogenesis	63
