## Contents

<b>1</b>	<b>Structures</b>	1
1.1	Crystals	2
1.1.1	Crystal Structures	2
1.1.2	Binding Forces and Lattice Energies	10
1.2	Liquids	17
1.2.1	When can a Liquid exist?	17
1.2.2	Local Order and the Pair Distribution Function	20
1.3	Liquid Crystals	22
1.3.1	The Nematic Liquid-Crystalline State	22
1.3.2	Orientational Order and Optical Anisotropy	28
1.4	Polymers	32
1.4.1	Chemical Structure and Chain Conformation	32
1.4.2	Polymer Melts	37
1.4.3	Solid Polymers	40
1.5	Structural Investigations Using Scattering Experiments	48
1.5.1	Interference	49
1.5.2	Scattering by Liquids	53
1.5.3	Crystal Diffraction	57
1.6	Exercises	65
<b>2</b>	<b>Moduli, Viscosities and Susceptibilities</b>	69
2.1	Mechanical Fields	69
2.1.1	Hookian Elasticity and Newtonian Viscosity	69
2.1.2	Liquid Crystals: Frank Moduli and Miesowicz Viscosities	70
2.1.3	Polymers: Viscoelasticity	79
2.2	Electric Fields	92
2.2.1	Dielectric Susceptibility	93
2.2.2	Orientational and Distortional Polarisation	94
2.2.3	The Piezo Effect	102

2.3	Magnetic Fields .....	104
2.3.1	Magnetic Susceptibility .....	104
2.3.2	Dia- and Paramagnetism .....	104
2.3.3	Magnetic Resonance .....	109
2.4	General Properties of Susceptibilities .....	119
2.5	Exercises .....	125
<b>3</b>	<b>Molecular Fields and Critical Phase Transitions .....</b>	<b>127</b>
3.1	The Ferroelectric State .....	128
3.1.1	Transition Scenarios .....	128
3.1.2	The Landau Theory of Critical and Nearly-Critical Phase Transitions .....	132
3.2	The Ferromagnetic State .....	136
3.2.1	Weiss Domains .....	137
3.2.2	Exchange Force Fields .....	140
3.3	The Nematic Liquid-Crystalline State .....	143
3.3.1	The Landau–de Gennes Expansion .....	144
3.3.2	The Maier–Saupe Theory .....	146
3.4	Phase Separation in Binary Polymer Melts .....	148
3.4.1	Binodals and Critical Concentrations .....	149
3.4.2	Flory–Huggins Theory .....	154
3.4.3	Spinodal Decomposition .....	160
3.5	Exercises .....	163
<b>4</b>	<b>Charges and Currents .....</b>	<b>165</b>
4.1	Metallic Electrons .....	166
4.1.1	The Classical Drude Model .....	166
4.1.2	The Fermi Gas Model .....	170
4.2	Electrons and Holes in Semiconductors .....	186
4.2.1	Electrons in a Periodic Crystal Field .....	187
4.2.2	Electron- and Hole-Conduction .....	196
4.3	Magnetic Field Effects .....	211
4.3.1	Cyclotron Resonance .....	211
4.3.2	The Hall Effect .....	214
4.3.3	Magnetisation Oscillations .....	215
4.4	Superconductivity .....	221
4.4.1	Meissner Effect and Energy Gap .....	221
4.4.2	Cooper Pairs. The Ginzburg–Landau Wavefunction ....	226
4.4.3	The Critical Magnetic Field. Type II Superconductors .....	233
4.5	Ionic Conduction in Electrolyte Systems .....	239
4.5.1	The Cell Voltage and the Gibbs Reaction Free Energy .....	242
4.5.2	Debye–Hückel Theory and Ion Mobility .....	246
4.6	Exercises .....	255

<b>5</b>	<b>Microscopic Dynamics</b> .....	259
5.1	Crystals: Propagating Waves .....	260
5.1.1	Lattice Vibrations .....	260
5.1.2	Spin Waves .....	273
5.1.3	Excitons .....	281
5.2	Liquids: Diffusive Motion .....	290
5.2.1	Diffusion Coefficients .....	290
5.2.2	Mobility and the Einstein Relation .....	293
5.3	Liquid Crystals: Orientational Fluctuations .....	295
5.3.1	Splay, Twist and Bend Modes .....	296
5.3.2	Equilibrium Nematodynamics .....	298
5.4	Polymer Melts: Chain Dynamics .....	302
5.4.1	Rubber-Elastic Forces and the Rouse Model .....	302
5.4.2	Entanglement Effects and the Tube Model .....	309
5.5	Time-Resolved Scattering Experiments .....	314
5.5.1	Time- and Frequency-Dependent Structure Factors ....	314
5.5.2	Dynamic Light Scattering in Liquids .....	319
5.5.3	Inelastic Neutron Scattering in Crystals .....	325
5.6	Exercises .....	331
<b>A</b>	<b>Thermodynamic Potentials</b> .....	335
<b>B</b>	<b>Solutions to the Exercises</b> .....	339
<b>C</b>	<b>A Small Selection of Further Reading</b> .....	359
<b>D</b>	<b>Nomenclature</b> .....	361
	<b>References</b> .....	371
	<b>Index</b> .....	373

Condensed Matter Physics

Crystals, Liquids, Liquid Crystals, and Polymers

Strobl, G.R.

2004, X, 381 p. 125 illus., Softcover

ISBN: 978-3-540-00353-3
