1	Introduction	1
1.1	Reactor Accident Analysis and Fuel Equation of State	1
1.2	The Role of Equation of State	2
1.3	Equation of State for Liquid UO_2 : Historical	4
1.4	Summary of the New Equation of State Features	13
1.5	General Notations	15
2	Governing Equations and Fundamental Formulae	17
2.1	Introduction	17
2.2	The Concept of Equation-of-State	20
2.3	Model Equations of State	22
2.3.1	Ideal Gas	22
2.3.2	Ideal Reacting Gas	24
2.3.3	Hard Bodies	24
2.3.4	Soft Spheres	26
2.3.5	Van der Waals' Model	27
2.3.6	Lennard-Jones Fluid	29
2.3.7	Charged Spheres	30
2.3.8	Composite Models	31
2.4	Physical and Chemical Models in Thermodynamics of Reacting Fluids	33
2.4.1	The Concept of Composition	33
2.4.2	Neutral Models of $\text{UO}_{2\pm x}$	34
2.4.3	Ionic Models	36
2.4.4	MIX Models	37
2.5	Conclusions	38
3	Ionic Models for Liquid Urania	41
3.1	Restricted Primitive Ionic Model	41
3.2	Extended Ionic Model	45

3.3	Local Equations of State for the Liquid Phase: General Requirements	49
3.4	Improved Restricted Primitive Ionic Model	49
3.5	Compatibility Conditions	51
3.6	Determination of the Coulomb Contribution	52
3.7	Conclusions	54
4	Gas-Liquid Coexistence in Uranium Dioxide	59
4.1	General Conditions of the Phase Equilibrium	59
4.1.1	Single-Component Fluids	61
4.1.2	Chemically Reactive Systems without Ionisation	61
4.1.3	Congruently Coexisting (Azeotropic) Compositions	62
4.1.4	Extremal Properties of the Thermodynamic Functions in the Azeotropic Points	63
4.1.5	Systems of Charged Species	63
4.1.6	Chemically Reacting Fluids with Ionisation	64
4.2	Calculation of the Equilibrium Composition and Thermodynamic Functions	65
4.3	General Structure of the Liquid-Vapour Phase Boundaries in $\text{UO}_{2\pm x}$	67
4.4	Equilibrium Properties and Composition of $\text{UO}_{2\pm x}$	70
4.4.1	Liquid Phase at Low Temperatures	70
4.4.2	Vapour Phase without Ionisation	71
4.4.3	Partially Ionised Vapour Phase	72
5	Application of the Chemical Model within the van der Waals Approximation	75
5.1	Non-Congruent Evaporation over $\text{UO}_{2\pm x}$	75
5.1.1	Assumptions	75
5.1.2	Calibration	76
5.1.3	Results	78
5.2	Oxygen Potential	86
5.2.1	Simplified Calibration Procedure	86
5.2.2	Calibration in the Case of Non-Congruent Evaporation ..	87
5.3	Composition of the Liquid Phase	89
5.4	Discussion	92
5.5	Justification of the MIX Models	95
6	New Equation of State for Fluid Uranium Dioxide Based on Thermodynamic Perturbation Theory	99
6.1	Thermodynamic Perturbation Theory	100
6.1.1	Simple Fluids	101
6.1.2	One-Fluid Approximation	104
6.2	Fluids Composed of Molecules with Anisotropic Interaction ...	106
6.2.1	Averaged Diameter of Non-Spherical Molecules	107

6.2.2	Effective Molecular Diameter	109
6.2.3	Estimation of the Anisotropy Parameter.....	110
6.3	Conclusions	111
7	Thermodynamic Properties of UO_2, as Predicted by the New Equation of State.....	113
7.1	Summary of the Model Features	113
7.2	Calibration	114
7.3	Validation of the INTAS-99-EOS	116
7.3.1	Density	118
7.3.2	Total vapour pressure	119
7.3.3	Heat capacity and thermal coefficients	121
7.4	Non-Congruent Equilibrium and Critical Point	123
7.4.1	Oxygen potential of liquid UO_2	124
7.4.2	Enthalpy on the vapour-liquid boundary	125
7.4.3	Equilibrium composition and non-ideality effects	127
7.4.4	Azeotropic compositions	128
7.4.5	Critical point in FCE approximation	130
7.4.6	Critical point under non-congruent evaporation	131
7.5	Concluding Remarks	133
A	Appendix	135
A.1	Thermophysical Properties of UO_2	135
A.1.1	Density of UO_2	135
A.1.2	Volume Changes on Melting	137
A.1.3	Thermal Expansion.....	137
A.1.4	Elastic Properties and Adiabatic Compressibility	138
A.1.5	Heat Capacity of Molten UO_2	140
A.1.6	Enthalpy and Entropy of Fusion.....	140
A.1.7	Vapour Pressure over Nominally Stoichiometric UO_2 Near Melting	142
A.1.8	The Congruently Vaporising Compositions of Urania... ..	144
A.2	Individual Components. Tables of Thermodynamic Functions ..	145
A.3	Estimated Molecular and Ionic Interaction Constants	176
A.3.1	Polarisability of Atomic O and U	178
A.3.2	Polarisability of U_mO_n Molecules	179
A.3.3	Dispersion Constants	180
A.3.4	Dipole Moments of U_mO_n Molecules	180
A.3.5	Sizes of U_mO_n Molecules	183
A.3.6	Conclusions.....	186
A.4	Thermodynamic Tables	187
