
Contents

1	Introduction	1
1.1	Short Remarks on the Nature and Importance of Turbulent Flows	1
1.2	Remarks on the Direct Numerical Simulation (DNS) and the $k - \varepsilon$ Model	1
1.3	Large Eddy Simulation (LES)	3
1.4	Contents of this Monograph	5
2	Mathematical Tools and Basic Notations	11
2.1	Function Spaces	11
2.2	Some Tools from Analysis and Functional Analysis	14
2.3	Convolution and Fourier Transform	17
2.4	Notations for Matrix-Vector Operations	18
3	The Space Averaged Navier-Stokes Equations and the Commutation Error	21
3.1	The Incompressible Navier-Stokes Equations	22
3.2	The Space Averaged Navier-Stokes Equations in the Case $\Omega = \mathbb{R}^d$	23
3.3	The Space Averaged Navier-Stokes Equations in a Bounded Domain	25
3.4	The Gaussian Filter	29
3.5	Error Estimate of the Commutation Error Term in the $L^p(\mathbb{R}^d)$ Norm	31
3.6	Error Estimate of the Commutation Error Term in the $H^{-1}(\Omega)$ Norm	41
3.7	Error Estimate for a Weak Form of the Commutation Error ..	43
4	LES Models Which are Based on Approximations in Wave Number Space	47
4.1	Eddy Viscosity Models	48

4.1.1	The Smagorinsky Model	48
4.1.2	The Dynamic Subgrid Scale Model	49
4.2	Modelling of the Large Scale and Cross Terms	51
4.2.1	The Taylor LES Model	52
4.2.2	The Second Order Rational LES Model	54
4.2.3	The Fourth Order Rational LES Model	57
4.3	Models for the Subgrid Scale Term	59
4.3.1	The Second Order Fourier Transform Approach	59
4.3.2	The Fourth Order Rational LES Model	60
4.3.3	The Smagorinsky Model	61
4.3.4	Models Proposed by Iliescu and Layton	61
5	The Variational Formulation of the LES Models	63
5.1	The Weak Formulation of the Equations	64
5.2	Boundary Conditions for the LES Models	65
5.2.1	Dirichlet Boundary Condition	66
5.2.2	Outflow or Do-Nothing Boundary Condition	67
5.2.3	Free Slip Boundary Condition	67
5.2.4	Slip With Linear Friction and No Penetration Boundary Condition	67
5.2.5	Slip With Linear Friction and Penetration With Resistance Boundary Condition	69
5.2.6	Periodic Boundary Condition	69
5.3	Function Spaces for the LES Models	70
6	Existence and Uniqueness of Solutions of the LES Models	73
6.1	The Smagorinsky Model	74
6.1.1	A priori error estimates	74
6.1.2	The Galerkin Method	78
6.2	The Taylor LES Model	92
6.3	The Rational LES Model	96
7	Discretisation of the LES Models	99
7.1	Discretisation in Time by the Crank-Nicolson or the Fractional-Step θ -Scheme	100
7.2	The Variational Formulation and the Linearisation of the Time-Discrete Problem	102
7.3	The Discretisation in Space	106
7.4	Inf-Sup Stable Pairs of Finite Element Spaces	108
7.5	The Upwind Stabilisation for Lowest Order Non-Conforming Finite Elements	114
7.6	The Implementation of the Slip With Friction and Penetration With Resistance Boundary Condition	117
7.7	The Discretisation of the Auxiliary Problem in the Rational LES Model	119

7.8	The Computation of the Convolution in the Rational LES Model	120
7.9	The Evaluation of Integrals, Numerical Quadrature	122
8	Error Analysis of Finite Element Discretisations of the LES Models	125
8.1	The Smagorinsky Model	126
8.1.1	The Variational Formulation and Stability Estimates	129
8.1.2	Goal of the Error Analysis and Outline of the Proof	136
8.1.3	The Error Equation	137
8.1.4	The Case $\nabla \mathbf{w} \in L^3(0, T; L^3(\Omega))$ and $a_0(\delta) = 0$	139
8.1.5	The Case $\nabla \mathbf{w} \in L^3(0, T; L^3(\Omega))$ and $a_0(\delta) > 0$	142
8.1.6	The Case $\nabla \mathbf{w} \in L^2(0, T; L^\infty(\Omega))$ and $a_0(\delta) \geq 0$	149
8.1.7	Failures of the Present Analysis in Other Interesting Cases	152
8.1.8	A Numerical Example	154
8.2	The Taylor LES Model	158
9	The Solution of the Linear Systems	163
9.1	The Fixed Point Iteration for the Solution of Linear Systems	163
9.2	Flexible GMRES (FGMRES) With Restart	165
9.3	The Coupled Multigrid Method	168
9.3.1	The Transfer Between the Levels of the Multigrid Hierarchy	169
9.3.2	The Vanka Smoothers	177
9.3.3	The Standard Multigrid Method and the Multiple Discretisation Multilevel Method	182
9.3.4	Schematic Overview and Parameters	183
9.4	The Solution of the Auxiliary Problem in the Rational LES Model	185
10	A Numerical Study of a Necessary Condition for the Acceptability of LES Models	189
10.1	The Flow Through a Channel	189
10.2	The Failure of the Taylor LES Model	191
10.3	The Rational LES Model	194
10.3.1	Computations With the Smagorinsky Subgrid Scale Model	194
10.3.2	Computations With the Iliescu-Layton Subgrid Scale Model	196
10.3.3	Computations Without Model for the Subgrid Scale Term	197
10.4	Summary	197

11 A Numerical Study of the Approximation of Space Averaged Flow Fields by the Considered LES Models	199
11.1 A Mixing Layer Problem in Two Dimensions	200
11.1.1 The Definition of the Problem and the Setup of the Numerical Tests	200
11.1.2 The Smagorinsky Model and the Rational LES Model With Smagorinsky Subgrid Scale Term	207
11.1.3 The Rational LES Model With Iliescu-Layton Subgrid Scale Term	219
11.1.4 The Rational LES Model Without Model for the Subgrid Scale Term	229
11.1.5 A Comparison of the Smagorinsky Subgrid Scale Term and the Iliescu-Layton Subgrid Scale Term	229
11.2 A Mixing Layer Problem in Three Dimensions	231
11.2.1 The Definition of the Problem and the Setup of the Numerical Tests	231
11.2.2 Evaluation of the Numerical Results	233
12 Problems for Further Investigations	241
13 Notations	245
References	251
Index	259
