## 1 Epidemiological Considerations in Breast Cancer

1.1	Introduction . . . . .	1	2.10	Extracellular Matrix Protein Expression in the Normal Breast . . . . .	32
1.2	Geographical Influences . . . . .	1	2.10.1	Angiogenic Index in the Lobular Structures . . . . .	32
1.3	Radiation as an Etiologic Agent . . . . .	2	2.10.2	Elastin in the Lobular Structures . . . . .	34
1.4	Electromagnetic Fields . . . . .	2	2.10.3	Tenascin in the Lobular Structures . . . . .	35
1.5	Environmental Pollutants . . . . .	3	2.11	Genomic Profile of Lobular Structures in Nulliparous and Parous Women's Breasts . . . . .	36
1.6	Reproductive Factors . . . . .	3	2.12	Novel Differentiation-Associated Serpin is Upregulated During Lobular Development . . . . .	40
1.7	Environmental Exposures at a Young Age that Increase the Risk of Breast Cancer . . . . .	4	2.13	Mammary-Derived Growth Inhibitor . . . . .	45
1.7.1	Endocrinological Milieu . . . . .	4	2.14	Conclusions . . . . .	45
1.7.2	Smoking . . . . .	4		References . . . . .	46
1.7.3	Alcohol as a Neuroendocrine Disruptor . . . . .	5			
1.7.4	Effect of Light on Puberty and Breast Cancer Risk . . . . .	5			
1.8	Conclusions . . . . .	6			
	References . . . . .	6			

## 2 The Breast as a Developing Organ

2.1	Introduction . . . . .	11
2.2	Prenatal and Perinatal Development . . . . .	12
2.3	Postnatal Development . . . . .	15
2.4	Pregnancy . . . . .	22
2.5	Postlactational Changes . . . . .	26
2.6	The Menopausal Breast . . . . .	26
2.7	Parenchyma-Stroma Relationship . . . . .	29
2.8	Genetic Influences in Breast Development . . . . .	30
2.9	Cell Proliferation and Hormone Receptors in Relation to Breast Structure . . . . .	31

## 3 Endocrine Control of Breast Development

3.1	Introduction . . . . .	49
3.2	Steroid Receptors, Cell Proliferation, and Breast Differentiation . . . . .	51
3.2.1	Relationship of Proliferating and ER $\alpha$ -Positive Cells in the Human Breast . . . . .	53
3.2.2	Cell Proliferation, ER $\alpha$ , and PgR Content in the Rat Mammary Gland . . . . .	53
3.2.3	Biological Significance . . . . .	55
3.3	Human Chorionic Gonadotropin as a Differentiating Agent in the Human Breast and in the Rodent Mammary Gland . . . . .	57

3.3.1	Evidence for a Receptor for Human Chorionic Gonadotropin in Human Breast Epithelial Cells . . . . .	57	4.3	Role of Estrogens in Human Breast Proliferation . . . . .	94
3.3.2	Human Chorionic Gonadotropin Receptor in the Rat Mammary Gland . . . . .	60	4.4	Estrogens in Human Breast Carcinogenesis . . . . .	95
3.3.3	Biological Significance of the LH/hCG Receptor . . . . .	60	4.4.1	Receptor-Mediated Pathway . . . . .	96
3.4	Effect of Human Chorionic Gonadotropin on Human Breast Epithelial Cells . . . . .	61	4.4.2	Oxidative Metabolism of Estrogen . . . . .	98
3.4.1	Effect on Protein Synthesis and In Vitro Translational Products of mRNA . . . . .	61	4.4.2.1	Estrogen as Mutagenic Agents . . . . .	100
3.4.2	Effect of Human Chorionic Gonadotropin Treatment on Inhibin Synthesis . . . . .	64	4.4.2.2	The Mechanism by Which Estrogens Induce Mutations . . . . .	100
3.4.3	Effect of Hormones on the Proliferative Activity of Cultured Normal and Neoplastic Human Breast Epithelial Cells . . . . .	68	4.4.2.3	Additional Factors Contributing to the Carcinogenic Effect of Estrogen . . . . .	100
3.4.4	Biological Significance of the hCG-Inhibin Pathway . . . . .	69	4.4.3	Estrogens as Inducers of Aneuploidy . . . . .	101
3.5	Homeobox Genes' Expression and Their Modulation by Human Chorionic Gonadotropin in Human Breast Epithelial Cells . . . . .	71	4.5	Biological Demonstration That Estrogens Are Carcinogenic in the Human Breast . . . . .	102
3.5.1	Class I Homeobox Gene Expression in Human Breast Epithelial Cell Lines . . . . .	72	4.5.1	The Proof of Principle . . . . .	102
3.5.2	Human Chorionic Gonadotropin Modulates Expression of Homeobox Genes . . . . .	73	4.5.2	The In Vitro Model of Cell Transformation . . . . .	102
3.5.3	Human Chorionic Gonadotropin and HOXA2 Inhibit AP-1 . . . . .	74	4.5.2.1	Transformation Effect of Estrogen in MCF-10F Cells . . . . .	102
3.6	Human Chorionic Gonadotropin and Histone Acetylation . . . . .	78	4.5.2.2	Transformation Effect of the Estrogen Metabolites . . . . .	106
3.7	Conclusions . . . . .	80	4.5.2.3	Role of Antiestrogens in the Expression of the Transformation Phenotype . . . . .	109
References	. . . . .	81	4.5.2.4	Detection of Estrogen Receptors in MCF 10F-Cells . . . . .	111
			4.5.2.5	Evidence for a Role of ER $\beta$ and Metabolic Activation of Estrogen in the Transformation of Human Breast Epithelial Cells . . . . .	112
			4.5.3	Genomic Changes Induced by Estrogen and Its Metabolites in Human Breast Epithelial Cells . . . . .	113
			4.5.4	Other Genomic Changes Induced by Estrogen and Its Metabolites in the Transformation of Human Breast Epithelial Cells . . . . .	118
			4.5.5	Chromosomal Alterations Induced by Estrogen and Its Metabolites . . . . .	124
<b>4</b>	<b>The Role of Estrogen in Breast Cancer</b>				
4.1	Introduction . . . . .	89			
4.2	Sources of Estrogens in Human Breast Tissue . . . . .	90			

4.6	A Unified Concept in the Role of Estrogen in Breast Cancer . . . . .	128
	References . . . . .	128

## 5 Pathogenesis of Breast Cancer

5.1	Introduction . . . . .	137
5.2	The Site of Origin of Breast Cancer . . . . .	137
5.3	Supporting Evidence for the Site of Origin of Breast Cancer . . . . .	139
5.3.1	In Vitro Studies . . . . .	139
5.3.2	Breast Architecture as a Determining Factor in the Susceptibility of the Human Breast to Cancer . . . . .	142
5.3.3	Specific Considerations on the Relation Between Lobular Development and Familial Breast Cancer-Related Genes . . . . .	147
5.3.4	Unifying Concepts . . . . .	149
5.4	Molecular Changes in the Initiation and Progression of Breast Cancer . . . . .	150
5.4.1	Differential Expression of Human Ferritin H Chain Gene and Breast Cancer . . . . .	150
5.4.2	S100P Calcium-Binding Protein as a Marker of Cancer Initiation . . . . .	153
5.4.3	Role of Intracellular $Ca^{2+}$ During Cell Immortalization and Cell Transformation . . . . .	161
5.4.4	The Role of Ca Intracellular and S100 Protein Expression in the Formation of Microcalcifications in Preneoplastic and Neoplastic Lesions of the Breast . . . . .	164
5.5	Genetic Changes Associated with Initiation and Progression of Breast Cancer . . . . .	167
5.5.1	Laser Capture Microdissection . . . . .	168
5.5.2	Microsatellite Instability and Loss of Heterozygosity in Microdissected Lesions of the Breast . . . . .	171

5.5.3	Example of Breast Cancer Genetic Heterogeneity Revealed by Laser Capture Microdissection Technique . . . . .	172
5.6	Summary and Conclusions . . . . .	175
	References . . . . .	176

## 6 Animal Models for Human Breast Cancer

6.1	Introduction . . . . .	181
6.2	General Concepts . . . . .	181
6.3	Chemically-Induced Mammary Tumorigenesis . . . . .	182
6.4	Radiation-Induced Mammary Tumorigenesis . . . . .	183
6.5	Genetic Background and Mammary Carcinogenesis . . . . .	185
6.6	Pathogenesis of Rat Mammary Tumors . . . . .	185
6.7	Mammary Gland Differentiation as a Modulator of Carcinogenic Response . . . . .	191
6.7.1	Cell of Origin of Rat Mammary Carcinomas . . . . .	195
6.7.2	Cell Kinetics and Mammary Carcinogenesis . . . . .	199
6.7.3	Role of the Stroma in the Pathogenesis of Mammary Cancer . . . . .	204
6.8	Pathological Classification of Rat Mammary Tumors . . . . .	209
6.8.1	Epithelial Neoplasms . . . . .	210
6.8.1.1	Intraductal Papilloma . . . . .	210
6.8.1.2	Papillary Cystadenoma . . . . .	210
6.8.1.3	Adenoma . . . . .	210
6.8.1.4	Precancerous Lesions: Intraductal Proliferation . . . . .	210
6.8.1.5	Carcinoma In Situ . . . . .	212
6.8.1.6	Invasive Ductal Carcinomas . . . . .	212
6.8.2	Stromal Neoplasms . . . . .	216
6.8.2.1	Fibroma . . . . .	216
6.8.2.2	Fibrosarcoma . . . . .	216
6.8.3	Epithelial-Stromal Neoplasms . . . . .	217
6.8.3.1	Fibroadenoma . . . . .	217
6.8.3.2	Carcinosarcoma . . . . .	218
6.8.4	Nonneoplastic Lesions . . . . .	218

6.9	Differential Diagnosis of Mammary Tumors . . . . .	218
6.9.1	Macroscopic Criteria . . . . .	220
6.9.2	Histopathological Criteria . . . . .	220
6.9.3	Biological Criteria . . . . .	220
6.10	Biological Importance of the Chemical Carcinogen-Induced Rat Mammary Tumor Model . . . . .	220
6.11	Genetically Engineered Mice Model . . . . .	221
6.11.1	Anatomy of the Mouse Mammary Gland . . . . .	221
6.11.2	Classification of Genetically Engineered Mouse Mammary Lesions . . . . .	224
6.11.3	Comparative Pathology of the Model Systems . . . . .	224
References	. . . . .	225

## 7 In Vitro Models for Human Breast Cancer

7.1	Introduction . . . . .	227
7.2	Growth Properties of Normal Human Breast Epithelial Cells In Vitro . . . . .	227
7.3	The MCF-7 Cell as a Model of Human Breast Cancer In Vitro . . . . .	230
7.3.1	Morphological and Growth Characteristics of MCF-7 Cells . . . . .	230
7.3.2	Growth of MCF-7 Cells in Tridimensional Matrix . . . . .	233
7.3.3	Growth of MCF-7 Cells in Athymic Mice . . . . .	237
7.4	Growth Properties of Immortal Human Breast Epithelial Cells In Vitro . . . . .	241
7.4.1	Telomerase Activation . . . . .	243
7.4.2	Abrogation of Cell Cycle Control . . . . .	243
7.4.3	Genes Preferentially Expressed During Cell Immortalization . . . . .	247
7.5	Transformation of Primary Cultures of Human Breast Epithelial Cells with Chemical Carcinogens . . . . .	250
7.6	In Vitro System of Cell Transformation . . . . .	252
7.6.1	Transformation of Human Breast Epithelial Cells with c-Ha-ras Oncogene . . . . .	252

7.6.2	Transformation of Human Breast Epithelial Cells with Chemical Carcinogens . . . . .	261
7.6.3	Ha-ras Enhances the Transformation of Human Breast Epithelial Cells with Chemical Carcinogens . . . . .	269
References	. . . . .	273

## 8 Genomic Basis of Breast Cancer

8.1	Introduction . . . . .	281
8.2	Genomic Changes Observed in Breast Cancer . . . . .	281
8.3	Microsatellite Instability as an Early Genomic Event in Breast Cancer Initiation . . . . .	284
8.4	Other Genomic Changes Associated with Immortalization, Transformation, and Tumorigenesis . . . . .	288
8.4.1	Tumor Suppressor Gene p53 . . . . .	288
8.4.2	Oncogenes . . . . .	289
8.4.2.1	c-Ha-ras . . . . .	289
8.4.2.2	c-neu, int-2, and c-myc Oncogenes . . . . .	289
8.4.3	mdm2 Gene . . . . .	290
8.4.4	Loss of Heterozygosity and Fluorescence In Situ Hybridization Analysis of Chromosome 17p . . . . .	291
8.5	Search for Specific Functional Relevance of the Genomic Changes . . . . .	292
8.5.1	Reversion of the Immortalization Phenotype . . . . .	292
8.5.2	Reversion of the Transformation but Not Immortalization Phenotype . . . . .	302
8.6	The Role of Mismatch Repair in the Initial Event of Carcinogenesis . . . . .	307
8.7	Unifying Concepts . . . . .	310
References	. . . . .	311

## 9 Preventive Strategies in Breast Cancer

9.1	Introduction . . . . .	317
9.2	Physicoprevention with Prophylactic Mastectomy . . . . .	320
9.3	Bioprevention of Hereditary Breast Cancer . . . . .	320
9.4	Chemoprevention Against Acquired Somatic Mutations . . . . .	321
9.4.1	Limiting Accumulation of Chemical Carcinogens . . . . .	323
9.4.2	Enhancing Excretion of Xenobiotics . . . . .	324
9.4.2.1	Organosulfur Compounds . . . . .	324
9.4.2.2	Indole-3-Carbinol . . . . .	326
9.4.2.3	Phytoalexin . . . . .	327
9.4.2.4	Triterpenoids . . . . .	328
9.4.3	Eliminating Oxidative Stress . . . . .	328
9.4.3.1	Carotenoids . . . . .	328
9.4.3.2	Vitamin E and Selenium . . . . .	330
9.4.3.3	Tea and Polyphenolic Antioxidants . . . . .	332
9.4.3.4	Flavonoids . . . . .	333
9.5	Chemoprevention Against Epigenetic Alterations . . . . .	335
9.5.1	Restricting Fat/Caloric Consumption . . . . .	335
9.5.2	Maintaining Proper Endocrine Milieu . . . . .	336
9.5.2.1	Steroids . . . . .	336
9.5.2.2	Aromatase Inhibitors . . . . .	338
9.5.2.3	Estrone Sulfatase Inhibitors . . . . .	339
9.5.2.4	Dehydroepiandrosterone . . . . .	340
9.5.2.5	Genistein . . . . .	340
9.6	Melatonin . . . . .	341
9.7	Eicosanoids . . . . .	343
9.8	Estrogen Antagonists . . . . .	345
9.8.1	Antiestrogens . . . . .	345
9.8.2	Aryl Hydrocarbon Receptor Agonists . . . . .	346
9.9	Interrupting Carcinogenic Signal Transduction . . . . .	347

9.9.1	Inhibitors of Receptor Tyrosine Kinases . . . . .	347
9.9.2	Inhibitors of p21 <sup>ras</sup> Farnesylation . . . . .	350
9.9.3	Inhibitors of HMG-CoA Reductase . . . . .	351
9.9.4	Monoterpenes . . . . .	351
9.9.5	Eicosapentaenoic Acid . . . . .	352
9.10	Inducing Breast Cell Differentiation . . . . .	352
9.10.1	Retinoids . . . . .	352
9.10.2	Pregnancy and Human Chorionic Gonadotropin . . . . .	354
9.11	N-Chemoprevention Against Growth of Neoplasms: Suppressing the Growth of Neoplastic Cells . . . . .	354
9.11.1	Vitamin D and Calcium . . . . .	354
9.11.2	Ornithine Decarboxylase Inhibitors . . . . .	356
9.12	O-Inhibiting Neovascularization or Angiogenesis . . . . .	358
9.13	Socioprevention of Breast Cancer . . . . .	358
9.14	Summary and Future Perspectives . . . . .	359
	References . . . . .	360

## 10 The New Paradigm in Breast Cancer Prevention

10.1	Rationale for a New Paradigm . . . . .	379
10.2	The New Paradigm . . . . .	379
10.3	Epidemiological and Clinical Basis for the New Paradigm . . . . .	380
10.4	Data from Experimental Animal Studies . . . . .	381
10.4.1	Pregnancy . . . . .	381
10.4.2	Placental Hormones . . . . .	382
10.4.3	Estrogenic and Progestagenic Agents . . . . .	385
10.4.4	Role of Pregnancy and Chorionic Gonadotropin in Mammary Gland Differentiation and Cancer Initiation . . . . .	387
10.5	Role of Human Chorionic Gonadotropin in Breast Cancer Progression . . . . .	392
10.5.1	Mammary Gland Development Under Influence of Human Chorionic Gonadotropin . . . . .	393

10.5.2	Hormonal Profile Induced by Human Chorionic Gonadotropin . . . . .	396	10.9	Tumoristatic Effect of Human Chorionic Gonadotropin on Malignant Human Breast Epithelial Cells Transplanted in Heterologous Host . . . . .	417
10.5.3	Effect of Human Chorionic Gonadotropin on Terminal End Buds, Intraductal Proliferations, and Ductal Carcinomas In Situ . . . . .	397	10.10	Effect of Recombinant Human Chorionic Gonadotropin on Primary Breast Cancer . . . . .	417
10.5.4	Effect of Human Chorionic Gonadotropin Treatment on DMBA-Induced Tumor Progression . . . . .	398	10.11	Isolation and Characterization of New Genes Induced by Human Chorionic Gonadotropin . . . . .	419
10.6	Effect of Human Chorionic Gonadotropin on Inhibin Expression and Its Relation with the Activation of Early Response Genes . . . . .	399	10.11.1	Genes Induced by Human Chorionic Gonadotropin in Human Breast Epithelial Cells In Vitro . . . . .	419
10.7	Effect of Human Chorionic Gonadotropin on Programmed Cell Death Gene Expression . . . . .	404	10.11.2	Genes Induced by Human Chorionic Gonadotropin in the Rat Mammary Gland . . . . .	423
10.7.1	Effect of Human Chorionic Gonadotropin in the Mammary Gland of Animals Treated with DMBA . . . . .	404	10.11.2.1	Morphological Phenotypes Induced by Urinary and Recombinant Human Chorionic Gonadotropin . . . . .	426
10.7.2	Effect of Human Chorionic Gonadotropin Treatment on the Expression of Apoptotic Genes in DMBA-Induced Mammary Carcinomas . . . . .	408	10.11.2.2	Differential Display and Northern Blot Analysis . . . . .	426
10.7.3	Effect of Human Chorionic Gonadotropin Treatment on the Expression of Apoptotic Genes in the Ovary . . . . .	408	10.12	Genomic Signature Induced by Human Chorionic Gonadotropin and Pregnancy . . . . .	430
10.7.4	Effect of Human Chorionic Gonadotropin Treatment on Apoptosis . . . . .	410	10.13	Unifying Concepts . . . . .	432
10.8	Evidence of a Direct Effect of Human Chorionic Gonadotropin in Mammary Epithelial Cells . . . . .	411	References		433
10.8.1	Human Chorionic Gonadotropin Has an Inhibitory Effect on DMBA Mammary Carcinogenesis in Ovariectomized Animals . . . . .	411			
10.8.2	Effect of Human Chorionic Gonadotropin in Human Breast Epithelial Cells In Vitro . . . . .	412
